Launch-N-Go
Provides transparent compression for applications
Macintosh 512KE or larger (68020 recommended for compressing files); System 6.0 or later.
Launch-n-Go is an innovation in application compression technology for developers, distributors and publishers. It provides transparent compression for applications and requires neither decompression nor installation — applications run in compressed form. Users simply launch applications and go to work as usual. There is no decrease in performance, but some applications may actually perform better. Launch-n-Go averages more than a 40 percent compression ratio, but can achieve 50 percent or better in some instances. Launch-n-Go can also compress an application's help files and other support documents. Besides the fact that it may require fewer disks to distribute a product, Launch-n-Go also simplifies the installation process — an application that required two disks may now require only one, allowing users to simply drag it from the product disk to their hard disk. Launch-n-Go uses System 7's compression support and is compatible with System 6.
$200 per year retail; license

Lights Out Sports Fans
Screen saver
Macintosh with 68020 or larger processor; 2 MB of RAM; System 6.0.5 or later; hard disk drive.
Lights Out Sports Fans uses authentic team logos to prevent dangerous screen burn-in by detecting inactivity and displaying one of 10 user-selected Game Plans. Because sounds are as important as the action, Lights Out Sports Fans allows fans to hear the roar of

the crowd and other game sounds. Users can choose from Collegiate, Major League Baseball, National Hockey League, National Basketball Association and National Football League. Features include: officially licensed logos by conference (users select Home and Visitor teams from a pull-down list); furnishes 10 (12 for Collegiate) customizable Game Plans (users set the game rules by modifying items, such as home or visiting teams, sound volume, speed of actions, period/inning/quarter to start and messages, which appear on banners or scoreboards); creates the feel of being part of the action by emitting a range of sounds relating to on-screen events; guarantees a home team victory when Home Team Advantage is selected or allows games to be decided randomly using actual baseball/football/basketball/hockey statistics; and permits users to determine the length of inactivity required before the screen saver activates. It also includes team logo wallpaper and password security.
$55 each retail
Quadrangle Software; 305 E. Eisenhower Pkwy., Ste. 208; Ann Arbor, MI 48108; 313-769-1675, 800-253-8397 or 313-769-1695 (fax)

MacBarcoda
Produces commercial-quality bar codes in-house
Macintosh Plus or larger.

MacBarcoda is a desk accessory used to produce commercial-quality bar codes in-house. It allows users to create UPC, Code 39, Interleaved 2-of-5, EAN, ISBN and ISSN bar codes within specifications defined by official standards bodies, such as AIM, the UCC and the ANA. A UPC code, for example, can be adjusted in between 80 and 200 percent of the nominal size in .1 percent increments; code height is separately adjustable to allow for bar-code truncation. To ensure accuracy of the final printed code, MacBarcoda allows bar width reduction adjustments in increments as small as .00004 inches. The bar code is saved as an EPSF, which can be imported into a wide variety of design packages and printed on any PostScript device. MacBarcoda is also available in an Illustrator- and FreeHand-compatible color version.

MacDiskManager
Software that prints disk directories on either NoLabel-System inserts or Rolodex cards to organize and identify disks
Any Macintosh.

MacDiskManager provides for the automatic management of Macintosh disks without using any adhesive labels. It reads the directory information from floppy disks and formats, displays and prints the editable information on either Rolodex file cards or on Weber's NoLabelSystem tabbed insert cards, which are made to fit into a plastic pocket that is permanently affixed to the disk. In addition, the software prints the date and a user's choice of numbering methods. MacDiskManager is bundled with the NoLabelSystem kit. Each kit contains 100 clear plastic pockets, 200 insert cards and 100 white tractor-feed Rolodex file cards.
$19.95 retail; MacDiskManager only
$29.95 retail; bundled with NoLabelSystem

MacDrive Probe
Thoroughly evaluates the performance of Macintosh 1.4 MB FDHD SuperDrives
Macintosh Plus or larger; System 6.0.4 or later.

Using HRD (High Resolution Diagnostic) alignment diskettes, MacDrive Probe allows users to thoroughly evaluate the performance of Macintosh 1.4 MB FDHD SuperDrives. When used with 800K drives, MacDrive Probe can perform extensive read/write testing or function as a complete exerciser unit for drive testing with Accurite Analog Alignment Diskettes. The Automatic Sequence function allows users to run all or selected tests on a specified 1.4 MB SuperDrive. In the Manual Testing mode, users can perform one alignment test of their choice, in real time, and results are continuously updated and displayed on the screen, facilitating viewing of results of any adjustments as a user is making them to the drive. Tests include spindle motor speed, azimuth head alignment, diskette eccentricity, positioner hysteresis, radial head alignment, read/write, effective head width, track zero adjustment and index to data time, with additional disk drive exerciser functions.

MacDrive Probe Service Depot Edition
Thoroughly evaluates the performance and checks the condition of Macintosh 1.4 MB FDHD SuperDrives
Macintosh Plus or larger; System 6.0.4 or later.

MacDrive Probe Service Depot Edition features high-resolution alignment diskettes, allowing users to thoroughly evaluate the performance and check the condition of Macintosh 1.4 MB FDHD SuperDrives. When used with 800K drives, MacDrive Probe can perform extensive read/write testing or function as a complete exerciser unit for drive testing with Accurite Analog Alignment Diskettes. MacDrive Probe Service Depot Edition also offers the MDIM (MacDrive Probe Interface Module), an external test board designed with numerous features for facilitating volume bench repair of floppy drives. LED indicator lights and test points allow ready monitoring of drive control signals. A Macintosh computer can be set up as a test station, for quick testing of drives connected to the MDIM, while at the same time isolating the drives and protecting the Mac from drive electrical malfunctions. Power to the drive can also be turned on and off conveniently through the Service Depot Edition software.

MacEKG 2.0
Diagnostic software
Macintosh Plus or larger.

MacEKG is a diagnostic initialization program (INIT) that administers a regimen of logic-intensive diagnostic performance tests each time users boot their machine. The program logs previous test results, which are user accessible through a CDEV, and uses this information to track performance history and warn of possible future failure. By learning and displaying the individual system's performance characteristics and alerting a user of any deviation, MacEKG provides users with virtual "gauges" to analyze how alterations such as the installation of INITs, CDEVs and other modifications affect their system. MacEKG can also warn of possible corruption within these items. A companion application, Restarter, is included. Restarter is primarily for a service technician to perform burn-testing for both pre- and post-machine repair. It allows a technician to configure the machine under test to continually reboot, allowing MacEKG to provide a long, historical log of the computer's condition and exposing any troubled faculties.

■ **MacJuke CD**
Jukebox controller software
Macintosh Plus or larger; 2 MB of RAM.

MacJuke CD is CD jukebox controller software that supports all popular jukeboxes with advanced features to maximize performance. A RAM cache allows users to cache frequently used data in the Macintosh RAM so the jukebox doesn't have to be accessed. Often used data is automatically kept in the RAM cache so that data is instantaneously accessed. The File cache retains directory information of mounted cartridges on the Macintosh internal drive so that searches and finds are quick. This feature also eliminates the cartridge swapping that occurs with other drives. MacJuke CD provides ease of use when importing, exporting, mounting and unmounting CDs. A clear listing displays all CDs and their titles.

■ **Magic Cursor**
Cursor does mouse functions
Macintosh Plus or larger; System 6.1 with Multifinder or System 7.

Magic Cursor is a "Universal Dwell Selection" utility that allows simple motions of the cursor to do the functions of the mouse button. This eliminates the need for a switch to do clicks, double clicks and drags. It will especially be of interest to those with a physical disability and are using some form of pointing access to control the computer. Magic Cursor has intelligence built in to automatically do certain functions, such as pulling down menus and clicking the close box, just by pointing to them. Used with HeadMouse, Magic Cursor give users full control of the computer by moving any part of their body without having any wires attached or wearing any equipment.
$195 retail; free demo disk available

Magnet 1.0
Intelligent agent
Macintosh Classic or larger; System 7.0 or later.

Using Magnet is like having a top notch staff of personal assistants to manage a user's files. Users tell Magnet once what to do — synchronize files between a PowerBook and office Macintosh, back up important files or continually search across the network for the most recent copy of a shared file, for example — and it will follow instructions flawlessly, on time, forever. Synchronizing files between a PowerBook and office Macintosh is as easy as pointing at two folders. By utilizing powerful agent technology, the synchronization will occur from then on automatically — even periodically from remote locations over the phone lines. Special features safeguard against overwriting important data and out of sync clocks. Its core search engine doubles as a multiattribute find file and file manager, giving users an outstanding value. A point-and-click interface makes automating all file-related tasks a breeze.

Mantis Free Pattern Product Bundle
Provides automated customization of the desktop background; and access to the growing community of users who utilize the dynamic Pixel Pattern graphic
Macintosh Classic or larger; System 6.0.5 or later running MultiFinder or System 7.0 or later.

The Free Pattern Product Bundle offers online service users $100 worth of Pixel Pattern ("ppat") savvy products free of charge. It is available only to users of online services, including the Internet. Users will receive the Living Desktop, an application that provides automated customization of the Macintosh desktop background; and EAC Online Connection Kit, which contains the software necessary to establish a modem connection with EAC Online, providing full electronic access to EAC artwork, support documents, demonstration software, artist profiles, contests and other EAC materials.

Mantis Development Corp.; 1357 Washington St.; West Newton, MA 02165; 617-969-6434, 800-230-6434 or 617-739-6328 (fax)

Mantis Living Desktop 2.0 With Desktop Dimmers
Offers both desktop pattern installation and screen saver technology in a single product
Macintosh Classic or larger; System 6.0.5 or later running MultiFinder or System 7.0 or later.

Living Desktop combines automated desktop pattern installation with state-of-the-art Desktop Dimmer screen saving technology all in a single, highly efficient and stable background application. Requiring minimal RAM and disk resources, Living Desktop launches at startup and runs quietly in the background while users go about their work. Desktop patterns are installed based on a user-defined timer, or manually. Desktop Dimmers are small, self-contained screen saver applications that make extensive use of Pixel Pattern graphics for dazzling displays. Desktop Dimmers are sub-launched by Living Desktop after a user-specified period of keyboard and mouse inactivity, and may also be manually launched. Entirely application based, both pattern installation and Desktop Dimmer technologies are efficient and reliable. No system modification or Control Panel/Extension (INIT) is required.

Mantis Pattern Manager
Creates and manages Pixel Pattern graphics
Macintosh Classic or larger; System 6.0.5 or later running MultiFinder or System 7.0 or later.

Pattern Manager provides professional-quality tools for use in creating and managing the popular Pixel Pattern ("ppat") graphic. A companion product to Living Desktop, Mantis Development's unique desktop pattern utility, Pattern Manager permits users to create and manage seamless, tileable Pixel Patterns using sophisticated tools specifically designed for use with these images. Features include: "Pattern Link" tool, allowing users to create patterns from within any graphics application; "Desktop Preview" tool installs any pattern on the Macintosh desktop, even during the design process; integrated copyright system provides permanent copyright protection and artist credit for each pattern; "Quick-Edit" tool provides instant access to pattern text for fast entry and editing; 3-D toolbar provides one-button access to pattern tools; ability to manage multiple pattern files at once; import/export via the Clipboard and PICT file format; ability to view patterns in a variety of standard sizes, in addition to custom configurations; supports more than 30,000 patterns per file, 256 colors per pattern and a variety of sizes up to 256 by 256 pixels; and a 90-day money-back satisfaction guarantee.

MasterClock
Synchronizes the clocks of Macintoshes on a network
Macintosh Plus or larger; System 7.0 or later.AppleTalk network.

MasterClock solves the problem of synchronizing the clocks of Macintoshes on a network. It is a set of control panels and background applications that allow users to designate an official Macintosh clock on an AppleTalk network and synchronize the clocks of other Macintoshes on the network to it. The MasterClock Server is installed on the Macintosh that is to serve as the official clock. The MasterClock Client is installed on every other Macintosh on the network that is to be synchronized with the official clock. Once per hour, each MasterClock Client requests the official date and time from the MasterClock Server and sets its own clock accordingly. MasterClock includes the MasterClock Server, the MasterClock Client, a detailed instruction booklet and a 30-day, money-back guarantee.

MasterJuggler
Utility that allows users to juggle applications and their windows, select from running and predefined applications, play or convert most sounds and more
Macintosh 512KE or larger; System 4.1 or later; System 6.0 and Finder 6.1 or later recommended.

MasterJuggler contains all of the features in Font/DA Juggler Plus and more. It greatly extends the power of the Macintosh by giving users access to unlimited numbers of fonts, DAs, Fkeys and sounds. Users can instantly open up to 120 of these resource files. There is no need to install them in the System file. MasterJuggler also lets users start applications and their documents or switch between them from a convenient pop-up window.

Alsoft, Inc.; PO Box 927; Spring, TX 77383; 713-353-4090 or 713-353-9868 (fax)

Maxima 3.0
24-bit mode memory extension
Macintosh II with PMMU or 68030/68040-based Macintosh, including Power Macintosh; 8 MB of RAM; System 6.0.7 or later.

Maxima creates a double capacity RAM disk from a Mac's memory. The RAM disk is just like a hard disk, only faster. Users click and the Maxima Automatic Setup creates a RAM disk pre-loaded with their system and favorite applications. With the System Folder on the RAM disk, the Mac will start up in a snap. Maxima makes routine operations and sluggish disk-intensive applications become lightning fast. Maxima's RAM disk is permanent. Users don't need to worry about backing up the RAM disk because Maxima does it automatically. Files are preserved and protected during Restarts, Shutdowns and even system crashes. Maxima's RAM disk is double capacity so users can put twice as much on the RAM disk. That's especially ideal for PowerBook users. The RAM disk saves battery power and makes a PowerBook faster.

Connectix Corp.; 2600 Campus Dr.; San Mateo, CA 94403; 415-571-5100, 800-950-5880 or 415-571-5195 (fax)

■ **Measure**
On-screen measurement and scales
Any Macintosh; System 6.0 or later.

Measure uses the position of the mouse cursor to measure any image displayed on the computer screen. Any scale of measurement may be defined. Measurements are displayed in a small relocatable window so that the cursor may be used to measure images on video displays. Measure is extremely easy to operate. Users enter a scale factor, set a point of origin, and the measurement window will continuously display the distance to the current cursor location in the specified units. The angle from the set origin and the current position is also displayed, so the vector between the two locations is the angle and the distance. Vertical and horizontal scales (rulers) may be displayed for any defined scale and unit of measurement — from micrometers to miles. Users can copy the custom scales from Measure and paste into their image or diagram document. Measure is System 7 compatible.

MenuFonts 4.2
Replaces pull-down Font menu with a custom Font menu that displays font names in their own typeface
Macintosh 512KE or larger.

MenuFonts is an INIT that replaces the standard Font menu with a custom Font menu that displays each font name in its own typeface. It groups, reorganizes and shortens font menus. MenuFonts is configurable. Users decide whether entire font families should appear on their own submenu or remain together on the Font menu. To speed font selection, MenuFonts includes a feature called KeyScroll. Pulling down the Font menu and typing the first letter of a font name immediately scrolls the menu to select the font. Moving the mouse into the MenuFonts optional FontShow Bar pops up examples of the selected font in several sizes. MenuFonts indicates the font type (PostScript, TrueType, MultiMaster or Bit Map) right on the font menu and much more.

MicroMath Calc
Scientific worksheet
Macintosh Plus or larger.

MicroMath Calc is a scientific math worksheet allowing multiline problems with notes to be solved, saved and edited, much like engineering notebooks. It comes with a calculator for "on-the-fly" calculations and unit conversions. The product is for anyone needing calculations, including scientists, mathematicians and engineers. All standard functions are provided, plus number theory functions. Also, financial, statistical, probability and date/time functions are included. Real numbers, complex numbers, real number intervals and Gaussian numbers (real numbers with associated errors) are some of the basic types built into the worksheet and calculator. Standard functions are accurate to 18 digits and calculations are IEEE compliant. Each number carries along with it information about associated units and unit systems. It offers unit calculations with unit factoring and dimensional analysis. The calculator is RPN and Algebraic and has 25 scrollable levels that are displayed with various views, including hex, fractional, hours-minutes-seconds, etc. More than 100 functions and 400 units are supported.

MicroProbe ADB
Diagnostic device
Macintosh SE or larger.

MicroProbe ADB is a diagnostic device for Macintosh computers. It tests the full scope of any given system's ADB circuit. MicroProbe ADB can accurately diagnose faulty ADB cables, keyboards, mouse devices, filters, fuses, transceiver and VIA chips. Service technicians, consultants and system administrators will appreciate the diagnostic features of MicroProbe ADB. The device can even diagnose non-bootable systems or computers displaying a Sad Mac. MicroProbe ADB makes testing external ADB devices easy. Most technicians must rely on additional or replicate devices for testing ADB functionality. If a keyboard is suspect, the technician would normally either hook the keyboard to another machine or attach another keyboard to the suspect computer. With MicroProbe ADB, the technician can monitor ADB communication signals and verify operation of both the keyboard and the bus without additional equipment.

MockPackage Plus Utilities 4.4
Collection of 10 desk accessories and utilities
Macintosh 512K or larger.

MockPackage Plus Utilities is a collection of 10 desk accessories. MockWrite lets users create, edit, read and print text files. MockChart converts numbers into charts or graphs 3 columns by 100 rows. MockPrinter prints in the background on ImageWriter printers and will print text files of any length. MockTerminal is a simple telecommunications desk accessory that offers modem file transfer. EZ-Menu is a Control Panel Device that allows keyboard control of menus. Aask is a Control Panel Device that allows users to selectively turn on and off startup utilities. Control-1 enables users to specify which Control Panel Device will appear upon opening the Control Panel. FolderShare is a Control Panel Device for AppleShare users that enables users to specify default settings for access privileges. LaserStatus is a desk accessory that monitors the use of LaserWriters and other PostScript printers. Widgets is a potpourri of utility functions that allows users to select special paper sizes for the ImageWriter and ImageWriter LQ, create custom start-up screens and convert PICT files to paint files.

MultiClip Pro 3.1
Clipboard enhancement utility that allows multiple, editable Clipboards, Scrapbooks and slideshow
Macintosh Plus or larger.

MultiClip is a Clipboard and Scrapbook enhancement utility. It allows a user to have multiple Clipboard "ClipFrames" and Scrapbooks, access them instantly, Cut/Copy and Paste, edit or select parts of elements cut or copied to the Clipboard, view Clipboard contents at different enlargement settings and transfer multiple Clipboard contents to the Scrapbook at any time. MultiClip is easy to use and works transparently with all popular applications. It is not copy protected, and online help is always available. MultiClip is System 7 compatible, including Publish & Subscribe, Photoshop plug-in support, Balloon Help and cut, copy, paste and play support for sound, and is QuickTime savvy.
$149 retail; includes free copy of Safe or Sorry
Olduvai Corp.; 9200 S. Dadeland Blvd., Ste. 725; Miami, FL 33156; 305-670-1112, 800-548-5151 or 305-670-1992 (fax)

MyDiskLabeler III
Disk utility that lets users design and print disk labels and directory reports
Macintosh Plus or larger; System 6.0 or later.

MyDiskLabeler allows users to design disk labels in a free-form "draw" environment. Users can create text, serial number, graphic and directory objects with patterns and colors. Icons and graphics can be imported in bit-map, PICT, PICT2 and EPS formats. Users can display and print complete directory reports, export directory data to other programs or quickly merge selected directory data directly onto labels — either one label at a time or read many disks in a single batch. Up to 100 15-character file or folder names can be placed on a label using the efficient micro-directory format. It prints case inserts and labels for SyQuest removable hard drives. Printing is precise and easy — just align the form in the printer and go. MyDiskLabeler is System 7 compatible.
$80 retail
Williams & Macias, Inc.; 3707 S. Godfrey Blvd.; Spokane, WA 99204; 800-752-4400

NetScrap
Multiuser network scrapbook application
Macintosh Plus or larger; System 7.0 or later.

NetScrap is a multiuser network scrapbook application that uses client-server database technology to provide fast and flexible access to graphics, sounds, QuickTime movies, text files and any other type of Macintosh document. NetScrap is as easy to use as the standard Macintosh Scrapbook, but much more powerful. Finding the exact items users are interested in is a breeze. Matches can be requested based on a number of criteria, including description, type, keyword, contributor and creation date. Megabytes — even gigabytes — of data can be searched in seconds. The thumbnail view allows users to see multiple items at once. NetScrap does not require separate file server software to provide network access. It supports both Program Linking and the Communications Toolbox (modem, ADSP, etc.) connections to the server.
$295 to $995 retail
Everyware Development Corp.; 6543 Mississauga Rd.; Mississauga, Ontario, Canada L5N 1A6; 905-819-1173 or 905-819-1172 (fax)

Now Compress 1.0.1
Doubles a user's disk space and reduces file transfer times
Macintosh Plus or larger; 1 MB of RAM; System 6.0.7 or later.

Now Compress is a fast, easy and safe way to automatically double a user's disk space and reduce file transfer times. It offers automatic, on-demand and archival compression in one easy-to-use application. It provides the industry's fastest and tightest compression, and protects files even through power failures. It is available in single and 50 packs.
$69 retail; single user

Now Software, Inc.; 921 SW Washington, Ste. 500; Portland, OR 97205; 503-274-2800, 800-237-3611 or 503-274-0670 (fax)

Now Fun! 1.0.1
Allows users to customize their system environment for fun and entertainment
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

Now Fun! allows users to customize their system environment for fun and entertainment. FunPictures beautifies the desktop with patterns, images or even company logos. FunSounds will play hilarious or informative sounds for specific system activities, and FunColors adds color to windows, menus and dialog boxes. Colorful, animated cursors from FunCursors will keep users chuckling. FunScreenSavers provides both additional security and hours of entertainment when the Macintosh is idle — it will even play screen saver modules from Berkeley Systems' After Dark and More After Dark collection. Now Fun! includes 100 sounds, 60 cursors, 30 screen savers, 40 desktop images and patterns, 25 color schemes for windows and controls and the ability to add or create more of everything.
$45 retail; single user

Now Utilities 4.0.2
System enhancement utilities
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

These Products Available Through Bottom Line Distribution
1-800-347-1923

Now Utilities has been developed to provide a complete set of file and system management tools. The package of seven powerful utilities allows users to customize their Macintosh to streamline day-to-day activities and to greatly reduce desktop "navigation" time. This collection is fully tested and designed to work together on any System 7 Macintosh. The collection comes with a 30-day money-back guarantee and telephone access to customer service and technical support. NowScrapbook will help users to view, organize, transfer and catalog graphics, text, sound and animation (QuickTime movies). NowMenus allows users to customize and extend the Apple menu or any of several other pull-down or pop-up menus. WYSIWYG Menus groups fonts by family and displays font menus in their presentation typeface. SuperBoomerang helps users quickly navigate through folders by keeping track of most frequently used documents and folders. StartUp Manager controls the loading of extensions and Control Panels upon startup. NowSave protects against data loss in System crashes or power failures by automatically saving a user's work. Profiler helps users track System problems by providing an analysis of their System configuration.

OffLine
Disk management utility
Macintosh Plus or larger; System 6.0.5 or later.

OffLine was designed and optimized to manage unmounted disks and files (offline storage). It is unique in addressing a need unmet by utilities designed principally for hard disk management. OffLine is a specialized database management system that maintains a database on a hard disk, containing information about unmounted disk volumes and documents on them. To give a user easy access to the database, the application uses four engines: the Catalog Engine gathers information from offline disks and stores it in the database; the Search Engine offers an extremely powerful and flexible environment for locating files on offline disk volumes; the Print Engine creates an adhesive disk label (for each of a group of user-selected disks) that includes the disk's name and a list of the documents it contains; and the Export Engine extracts the database information and saves it in formats useable by virtually any other application, including word processors, database management systems and spreadsheets. OffLine is System 7 compatible.

On Cue II
File launching utility
Macintosh Plus or larger.

On Cue II gives users more control over their System 6 or 7 Macintosh desktop. It increases productivity by eliminating time-consuming steps. With On Cue II, users can instantly launch any file or application, or simultaneously launch a group of files and applications — without opening layers of folders — with a single mouse click. For example, users can group all of the documents required to make a presentation — word processor, spreadsheet and paint program files — and launch it all with one mouse click from a pop-up menu. KeyLauncher allows users to quickly launch any file from the keyboard, without opening layers of folders, by typing all or part of its name. Users can return to work on a recently-used document by retrieving a list of up to the last 100 files used and launch any of them instantly. MatchMaker conveniently launches files that have missing applications by assigning another application of a user's choice. With File Search, users can quickly locate files by using the following search criteria: file name, file format (e.g., TIFF, PICT), creator application, dates created or modified, file size or any combination of these criteria. From within any application, users can instantly find, get info, copy, move, delete and rename files or folders without using the Finder. With On Startup, users can easily manage programs that load when the computer is turned on (e.g., system extensions, control panels) by defining the priority and groupings in which these programs are loaded into the computer. Ten additional time-saving features are also provided.

On The Road
PowerBook connectivity utility
Macintosh PowerBook; 2 MB of RAM (4 MB recommended); System 7.0 or later.

On the Road is a Macintosh PowerBook connectivity utility designed specifically to ease the connectivity headaches of PowerBook users while taking their computers on the road. On the Road is a must for PowerBook owners who prepare documents while away from their office or home. When writing letters, memos or using any other application whose output needs to go to a printer, On the Road quietly defers any printed output until users connect to a network and then automatically prints while users attend to other tasks. On the Road is particularly attractive to owners of the PowerBook Duo 210 and 230 computers. With these computers, On the Road automatically configures connectivity settings specific to each docking station. On the Road is compatible with most PowerBooks, and takes advantage of Apple Events.

Connectix Corp.; 2600 Campus Dr.; San Mateo, CA 94403; 415-571-5100, 800-950-5880 or 415-571-5195 (fax)

Open Sesame! 1.1
Intelligent agent
Macintosh Plus or larger; System 7.0 or later.

Open Sesame! is a software assistant that sits in the background, observes user actions, learns repetitive patterns and offers to do them for the user — just like an ideal assistant would do. Open Sesame! performs a variety of tasks like opening and closing folders, documents and applications; Apple menu, desktop and start-up items management; trash disposal; window arrangement; and rebuilding the desktop. Not only does Open Sesame! learn from the user, but the user also has the option of giving instructions directly to Open Sesame! Users have complete control over how Open Sesame! communicates: as soon as an observation is learned, every Wednesday at 2:00 or whenever the user has time. Open Sesame! will increase desktop productivity by minimizing the number of mouse/keyboard clicks required to accomplish a given task.
$59 retail; to order direct, call 800-913-3535
Charles River Analytics Inc.; 55 Wheeler St.; Cambridge, MA 02138; 617-491-3474 or 617-868-0780 (fax)

OptiMem
Software memory upgrade
Macintosh Plus or larger; System 7.0 or later.

OptiMem is a new system extension that does exactly what its name implies — it optimizes the way the Mac uses memory. It gives users more usable memory, like a hardware upgrade. But it's 100 percent software so it installs in seconds, costs less and does more. OptiMem dramatically increases, often more than doubles, the hardware's ability to open applications and documents, and keep them open. OptiMem works like it's automatically adjusting the size of open applications. It loads applications into minimum-sized blocks of memory; then it constantly reallocates memory among applications while they're operating. So users waste less time quitting, resizing partitions and restarting just to expand or open documents. OptiMized applications will not run out until users have exhausted every byte. If users still manage to push their memory to the limit, OptiMem gives them plenty of warning. Then users can simply close a window or two in any application and keep on going. OptiMem is also designed to avoid compatibility problems.
$129 retail
Jump Development Group; 1228 Malvern Ave.; Pittsburgh, PA 15217; 412-681-2692 or 412-681-2163 (fax)

OutSpoken 1.7
Screen reading software for blind users
Macintosh Plus or larger; System 6.0.2 or later.

OutSpoken is a software-only solution that permits access to most Macintosh applications by persons who are blind or who wish to see and hear text simultaneously. OutSpoken uses speech output to read all text information on the screen (folder names, file names, menus, text files, spreadsheets, etc.). Users can read single letters, words, lines or a full screen of information at a time. All mouse commands, including clicking and dragging, can be executed via a set of keypad commands; additional keypad commands permit rapid access to the menu bar, close boxes and scroll bars. Commands can also be issued from the keyboard for Macintosh Plus or PowerBook users. Dictionaries for customizing the pronunciation of words and naming graphic objects are provided. Users can also specify how OutSpoken should communicate on-screen information (e.g., whether all, some or no punctuation should be pronounced), and control OutSpoken's speed, volume and pitch.

PatchMaker V2.1
Generates patch programs that can be used to upgrade any Macintosh application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

PatchMaker is a utility for generating upgrade programs between any two versions of an application or data file. Patches created by PatchMaker require no licensing and are complete Macintosh programs that provide a convenient method to upgrade customers. Patches generated with PatchMaker are typically 10 to 20 percent of the size of the complete program (depending on the number of changes made). Patches are pirate-proof because a user must already have the old version to successfully use the patch. Features include: patches work on both the data and resource forks of any Macintosh file; "open patches" provide upgrades from any previous version of the software; custom patch interfaces with company icons, splash screens and patching information added automatically by PatchMaker; and an MPW tool is included for automatic creation of patches within MPW build scripts.

Everyware Development Corp.; 6543 Mississauga Rd.; Mississauga, Ontario, Canada L5N 1A6; 905-819-1173 or 905-819-1172 (fax)

PathFinder
Automated stack mapper
Macintosh Plus or larger; 1 MB of RAM.

PathFinder, the Automated Stack Mapper, sits in the background during a HyperCard session collecting information, and, when asked, draws a map showing a user where they are (on which card and in which stack) and where they may go from there. A user may then explore HyperCard by requesting a remap from different perspectives. PathFinder will also let a user view a card without activating any of the associated stack, background or card scripts, or will let a user go directly to a chosen card. It may be used for orientation purposes, as a debugging tool to check logic flow, or, by special license agreement, may be incorporated within other HyperCard products to provide a dynamic form of orientation help.

Peace Of Mind 2.0
Hardware diagnostic software
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

Peace of Mind is a diagnostic program that helps users determine if their Macintosh hardware is

operating correctly. It helps identify malfunctioning hardware, locate and analyze intermittent problems and verify correct operation of newly-installed hardware. The comprehensive reports, logs and status displays keep users informed of test progress and results. More than 150 hardware diagnostic tests can be run individually or in a user-selected group, using either the standard icon interface or the System 7-style "power user" interface. Tests can be run once for verification, or repeatedly to "burn-in" new components or to help find intermittent problems. The system, video and disk benchmarks give a clear graphic display of how a user's Macintosh is performing.

Photo Screen Saver
Screen saver
Macintosh with 4 MB of RAM; hard disk drive; 8-bit color; System 7.0 or later.

Photo Screen Saver is a stand-alone screen saver application that can be customized by DeskTop Software to include corporate or institutional slogans, logos and images. This product offers a unique opportunity for users to promote corporate agendas and policies while providing the screen saving function at the same time. The ability to superimpose a logo on any image set or to have an image set consisting of corporate or institutional themes results in a refined business image. Several standard image sets are available, including college campus and geographically-specific sets. Additional image sets can be purchased or custom produced and added to the application by DeskTop Software or the end user.

PICTure This 2.0
Graphics file conversion utility
Macintosh SE/30 or II family; 1 MB of RAM; System 6.0 or later.

PICTure This is an application/desk accessory that converts a wide range of graphic file formats to PICT2. The PICT files can be used as is, or edited by most Macintosh software packages. In addition, the program allows users to save the converted PICT image into the Clipboard so that it can be pasted into another application. File formats supported include: Targa, CGM, Dr. Halo CUT, Gem IMG, Lotus PIC, Lotus BIT, PCX, Sun Raster, PixelPaint, IFF, GIF, RLE, TIFF, RIFF, X11 bit maps and MacPaint. Version 2.0 lets Macintosh users convert graphics imported from Windows, OS/2 and other platforms to PICT images. It will convert more than 20 formats, and adds 32-bit color conversion capability to previously supported formats.

FGM Softworks, Inc.; 131 Elden St., Ste. 108; Herndon, VA 22070; 703-478-9881

PixelPlay
The motion picture screen saver
Macintosh SE/30, II, Centris, Quadra, Performa or PowerBook family; QuickTime 1.5 or later (included); System 6.0.7 or later.

Relying on QuickTime technology, PixelPlay turns a user's screen into a collage of multimedia imagery by playing back any combination of video, sound, two- and three-dimensional animations or scanned images. PixelPlay is available in two versions: PixelPlay, a stand-alone application, and PixelPlay 4AD, a module for After Dark 2.0 and Star Trek screen saver engines. PixelPlay lets users customize the selection and playback of QuickTime movies. Users can play single movie files or entire folders full of movies in whatever order they wish and watch them make colorful collages while floating around the screen. PixelPlay 4AD has all the functionality of the PixelPlay application and it takes advantage of After Dark's sophisticated screen saving features, sleeping after a certain amount of time, monitoring system activity, sleep now and sleep never corners, etc.

PopupFolder
Finder navigator
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later.

PopupFolder is a powerful utility that speeds up folder access by letting users open documents, launch applications or even move files via a menu instead of the traditional double-click method. In the Finder, the Apple Menu, or even within the application, PopupFolder makes it easy to navigate through a hard disk by hierarchically displaying the contents of all the folders and volumes in a menu. Accessing a file is simply a question of dragging the mouse over the folders until users reach the item of their choice.

Power To Go 2.0
Utilities offer extended battery performance, advanced security and usability enhancements
Macintosh PowerBook; System 7.0 or later.

Power To Go is a collection of utilities for the Macintosh PowerBook designed to extend the system's operation time between battery charges and enhance overall usability of the PowerBook environment. Power To Go intelligently handles battery power consumption and offers security for private data, screen saving, automatic menus, a choice of animated cursor locators, modem/fax and hard disk activity indicators, instant system sleep and a fast airport security check feature. Power To Go also supports settings for multiple users, as well as for different work environments. Version 2.0 of Power To Go includes the StuffIt SpaceSaver file compression utility, which transparently compresses a user's files and folders by an average of 50 percent.

PowerBook File Assistant
File synchronization package
Macintosh PowerBook.

The PowerBook File Assistant software is a synchronization application that will automatically ensure files on both a user's PowerBook and desktop Macintosh computer are updated when a user connects the machines. The application can be set to make updates manually or keep prior versions of documents, depending on user preferences. With its unique database design, it also avoids common synchronization problems, such as making extra copies of documents already updated, whose name has been changed or which have been thrown away intentionally. In addition, the software package also includes an attractive array of tools designed to address issues specific to mobile computing, including battery-life management, deferred printing and automatic server remounting.

■ **PowerBright Auto-Shutdown And Power Monitoring**
Software and cable system interface
Macintosh II or larger; System 7.0 or later or A/UX.

PowerBright Auto-Shutdown and Power Monitoring software is a software and cable system that interfaces with IntelliPower Bright-UPS Uninterruptible Power System IQ 650, IQ 800 and IQ 1100. Users control the Bright-UPS from their keyboard and monitor characteristics of utility line power, battery status, input/out voltage and load level. They can view and print graphic and statistical information from Power Quality Event History files. Automatic Shutdown function sends "Quit and Save" Apple Events to any open applications on a system. Applications that support this event will save their data files, exit and shut down gracefully. PowerBright works with any Macintosh OS, A/UX or Power Macintosh.

PowerChute
UPS monitoring
Macintosh Plus or larger; AppleShare 2.0 (or later) file server; APC UPS with computer interface.

PowerChute is a UPS monitoring program designed to protect an AppleShare network from data corruption resulting from power disturbances. It is installed in the Macintosh control panel and uses the computer interface built into many American Power Conversion UPS systems, including the models 110SE and 370ci; Back-UPS 400-1250; and Smart-UPS 400-2000. When utility power fails, PowerChute begins a shutdown timer on the server. All users are notified of impending server shutdown. If power returns, the shutdown is canceled and users are notified that power has been restored. If power does not return, all users are automatically logged off and the server is shutdown safely and properly.
$99 retail

PowerLaunch II
Desktop launching agent
Macintosh Plus or larger; System 7.0 or later.

PowerLaunch II is a Macintosh desktop launching agent (DLA) that allows users to store applications, documents, control panels, desk accessories, sounds and any other "double-clickable" file on a series of icon palettes for quick and easy access. Files launched from within PowerLaunch II can be configured to temporarily modify the Macintosh's sound and video setting or even hide open windows as the file is launched. This is much faster for the user than having to select each control panel, modify these settings, launch the file and reset the settings upon program termination. PowerLaunch II also features group launching and auto-launching capabilities. Group launching allows groups of files to be launched together. Auto-Launching allows files or groups of files to be launched at pre-determined times for purposes such as timed backups, etc. PowerLaunch II's highly-flexible user interface allows the user to lay out their icon palette any number of ways and display "Power Tools" only when needed.

PowerMerge
Keeps files on a user's desktop Macintosh and a second Macintosh or disk in sync with each other
Macintosh Plus or larger; System 6.0.4 or later.

These Products Available Through Bottom Line Distribution
1-800-347-1923

PowerMerge automatically updates files between a desktop Macintosh and a PowerBook computer. By simply connecting the PowerBook to the desktop Macintosh, PowerMerge will automatically update any files that have been changed on one computer to the other. A user establishes which files, folders or disks he or she would like to be kept up to date, and whenever the two machines are brought together, PowerMerge will do the updating automatically. PowerMerge will also synchronize files between two desktop Macintosh computers, a removable hard disk and a Macintosh, multiple floppy disks or any combination of these. Features include: automatic reconciliation based on previously selected files, folders or disks; drag and drop ease of use; inclusion or exclusion of individual files, folders or disks; inclusion or exclusion by document types or creators; bidirectional updates; disk locking allows single direction updating; conflict notification if changes have been made to files on both computers since updating; unlimited setups can be created for future synchronization; fully network compatible; supports Balloon Help and System 7; and more. PowerMerge will create a History Log of each session so users always have a record of which files were updated.

Preview III
Replacement printer driver
Any Macintosh.
Preview is a replacement printer driver that allows printed output to be viewed on the screen in miniature, one page at a time. A user is also given the option of viewing a normal-sized section of a page and of scrolling around the page to look at its different sections. To optimize ease of use, Preview can be accessed through the Chooser or through an Fkey. A user can also easily switch back and forth between Preview and the normal printer driver.

Print Juggler
Software to facilitate printing
Macintosh Plus or larger; System 7.0 or later.
Print Juggler is a software extension for the Macintosh that allows quick and easy monitoring and printing to one or more networked LaserWriters. Using Print Juggler, the status of printers can be seen at a glance and printers can be selected in one step, avoiding the tedious, multistep process used by the Chooser and the print monitor. The Print Juggler icon is a permanent menu bar item, accessible from any application and the Finder, from which the status of printers can be monitored and a printer can be selected for printing to. Printers can also be represented by icons, which may be placed on the desktop. These icons are automatically updated to reflect the status of printers: idle, busy, not on the network or printer error. The desktop icons can be used to choose a printer or for drag-and-drop printing.

ProtoFont
Font organization utility
Macintosh Plus or larger.
ProtoFont automatically creates spec sheets for a user's font library. Users can find the perfect font for a graphic design job by viewing sample text in all fonts. ProtoFont can be used for choosing headline and logo typefaces. Font sample pages can be printed in many different formats to create a spec book. Sample text can be viewed and printed in multifont, multisize and multileading views, full character sets, keyboard character maps and many other views. Users can get listings with sample text of all fonts in the system. Any view can be saved as a PICT file for inclusion in other applications. ATM/Type 1 or TrueType is recommended but not required. ProtoFont is System 7 compatible and includes Balloon Help and online documentation.
$50 retail
Imaja; PO Box 6386; Albany, CA 94706; 510-526-4621, 800-294-6252 or 510-559-9571 (fax)

QuickTools
Utilities to help users work more safely, productively and efficiently
Macintosh Plus or larger; System 6.0 or later.
QuickTools is a collection of eight Macintosh utilities that seamlessly integrates into a user's system. Users can make each QuickTool work the way they want by changing easy-to-understand settings in the Control Panel. Included are: PowerStrip, an application/document launcher; Sunset, 30+ screen savers; Snipper, a screen capturer that supports 24-bit color; Barricade, a low-level security program; WorkSaver, which automatically saves a user's current document at specified intervals; Functionality, activates the cut, copy, undo and paste keys (F1 through F4) on the Extended Keyboard; Dialog Power, assigns command key equivalents to all dialog boxes; and Instant Menus, which brings the menu to the cursor.

RAM Doubler
Provides twice as much memory
Macintosh II with PMMU or 68030/68040-based Macintosh, including Power Macintosh; 4 MB of RAM; System 6.0.7 or later.
RAM Doubler doubles a user's RAM without complicated installation or expensive hardware. It's worry-free right from the start. RAM Doubler gives a Macintosh twice as much memory to open applications. The best thing about RAM Doubler is that it's easy to use. A user just clicks to double the RAM. RAM Doubler includes a one-step installer for the software and an easy-to-use manual. Nothing else is required. It's never been simpler or more affordable to add memory to a Macintosh. RAM Doubler is a System extension, so there's no need for adjustments or any special controls.

Connectix Corp.; 2600 Campus Dr.; San Mateo, CA 94403; 415-571-5100, 800-950-5880 or 415-571-5195 (fax)

RapidCD
Speeds performance of CD-ROM drives
Macintosh Plus or larger.
RapidCD speeds performance of CD-ROM drives, making tasks such as opening folders and searching for files up to 10 times faster. RapidCD is a control panel that replaces other CD-ROM drivers like the Apple CD-ROM extension. It uses both "smart" RAM caching to speed up reading frequently used data and to improve QuickTime playback from CD-ROM discs. RapidCD's directory caching uses space on a user's local hard disk to make opening and viewing folders and finding files on a CD-ROM as fast as on a hard disk. RapidCD works with standard software to allow access to single-session and multisession Photo CD, ISO 9660 and High Sierra CD formats. All popular CD-ROM mechanisms are supported, including all internal and external Apple CD-ROM drives and multispeed drives. RapidCD includes audio CD playing functions and can be used with other software for audio CD playback.

Refresh! For Macintosh
Fun utilities
Macintosh Plus or larger; System 7.0 or later; 2 MB of RAM.
Refresh! is a collection of utilities that will revamp the Macintosh desktop. From the desktop background, menu bar on top of the screen, to icons for applications, documents, folders and even floppy disks, users can decorate and personalize their black and white old Mac desktop to bring out its identity. Users can choose from more than 50 pre-designed desktop textures and patterns. They can change the way folder icons look forever by embedding an appropriate image in the middle of the icon, and give it a 3-D look and feel. Users can design their own MenuBar patterns. The Iconder and Silver3D Folders assist users in remembering where documents and files are located. With these utilities, the Macintosh will never look the same again.

Replica For Macintosh
Portable document software
Macintosh Plus or larger; System 7.0 or later.
Replica for Macintosh portable document software by Farallon provides the easiest way to share any document with anyone, regardless of application, font, graphics or computer platform. Replica eliminates the frustration of incompatibility between exchanging documents and saves users the cost of buying multiple applications for multiple computers. With a single copy of Replica software, a user can begin sharing documents from any application with any fonts or graphics. By including the document and the free Replica Viewer in a single "viewer-embedded" file, users ensure that co-workers can open, view and print documents, which retain all formatting, fonts, graphics and colors of the original. Copy and paste tools allow easy reuse of information in other documents. Distributing documents electronically or on disk instead of on paper saves printing and copying costs, postage, frustration and time. With just basic Macintosh skills, creating and sending Replica documents is as easy as printing.
$99 retail; single user

■ **Screen Savior**
Screen saver
Macintosh 512K or larger; Berkeley System's After Dark.
Screen Savior is based on the King James Version of the Bible. Christ's words are displayed in chronological order on screen, starting with quotes from Matthew and ending with Revelation, with the verse number at the beginning of the quote. There are more than 2,000 quotes from the Man who lived 2,000 years ago. Users simply drag Screen Savior into their After Dark folder to install the software. Screen Savior is selected using the After Dark control panel.

ScreenSavor Starter Kit
Screen saver; high-quality, full-color photographs
Macintosh LC or larger; 4 MB of RAM; 8- or 24-bit display; System 7.0 or later.
ScreenSavor is a screen saver product specifically designed to display high-quality, full-color photographs. The program works as a stand-alone application or as an accessory to After Dark, Intermission and Star Trek: The Screen Saver. It is unique for its large library of outstanding photographs, remarkable display effects, high degree of controllability and use of Apple's QuickTime decompression technology. The ScreenSavor program comes with a Sampler Set of 12 images and QuickTime. Additional add-on collections of photographs, sold separately, are assembled into

thematic Image Sets, including NASA/space, wildlife, undersea life, aircraft, golf, skiing, high-speed/scientific photos, pets, landscapes and more. Dozens of different image sets are available and more are added continuously. ScreenSavor also supports the display of a user's own PICT images. With appropriate licensing, images to be displayed may be located on any peripheral device, including optical disks, CD-ROM or network servers, conserving hard disk space. All photos in MIFP's standard Image Sets include a special color palette that is optimized for that image, giving the best possible color performance on an 8-bit display monitor. Virtually all display parameters can be customized by adjusting control panel settings within the ScreenSavor program.

Screenscapes
Transforms a user's monitor with spectacular background patterns
Macintosh LC or larger; System 7.0 or later.

Screenscapes, the latest desktop diversion for the Macintosh, transforms a user's monitor with spectacular background patterns over which work windows "float." Screenscapes starts with a collection of 650 fabulous color images to suit all kinds of moods and tastes. Screenscapes' Auto Changer can surprise users with a different pattern every day. Screenscapes' Special Effect Modules enable users to customize any of the 650 images to their liking. And Screenscapes Create Modules empower the most "artistically challenged" individuals to produce extraordinary patterns in a matter of seconds. The simpler patterns take as little as 1K of RAM, while the most complex require no more than 64K. And because Screenscapes does it all without any System Extension, INIT, Control Panel or System file modification, users don't have to worry about bogging down their system with compatibility problems.

Silver Cloud
Hierarchical "Chooser" replacement; personal, zone and device manager
Macintosh Plus or larger; System 6.0.5 or later.

Silver Cloud is a hierarchical replacement for the Macintosh Chooser. It includes the ability to organize zones into hierarchical zone folders and to create device folders containing convenient aliases (or pseudonym references) for favorite devices. For network managers, Silver Cloud is an administrative tool that provides the means to present and control consistent, simple "views" of the network that ultimately appear in the "Chooser" windows of various groups of users. With Silver Cloud, the views of zones and devices on the network presented to users is contained in a configuration file. These files, each of which may represent a uniquely customized network scheme, can be created quickly at the network manager's desk and distributed to groups of users as appropriate. The "Hiding" features of Silver Cloud allow a network manager to eliminate specific zones from view in any given configuration, permitting users to select only authorized devices. These views can be "Locked" and only modified by the network manager. This can save time and money by making network usage easier for novice users and restricting access to expensive links.

■ The Simpsons Screen Saver
Screen saver
Macintosh LC or larger; 4 MB of RAM; System 6.0.7 or later; 4 MB of free hard disk space.

Users can laugh out loud with The Simpsons Screen Saver, the latest addition to the After Dark family. The Simpsons Screen Saver features 16 hilarious, animated displays, including Bart spray painting the desktop; Homer eating the screen; Lisa playing her saxophone; interactive How to Draw the Simpsons; Marge, Maggie, Itchy and Scratchy at war; Krusty the Clown in the spotlight; Grampa spouting wisdom; Mr. Burns, Smithers and Flanders and more than 40 other characters. The Simpsons Screen Saver also contains voices, sounds, music, EcoLogic power manager, password protection, SystemIQ to maximize system performance and Simpsons Clocks, Messages and Trivia. It is a stand-alone product and is After Dark and System 7 compatible.

Berkeley Systems, Inc.; 2095 Rose St.; Berkeley, CA 94709; 510-540-5535, 800-877-5535 or 510-540-5115 (fax)

Sneak Preview 1.0
Allows users to instantly preview any document from the System 7 Finder, including QuickTime, text and graphics
Macintosh with 68020 processor or larger (SE/30, LC, II, Centris, Quadra); System 7.0 or later.

Sneak Preview enables users to instantly preview the contents of any document from the System 7 Finder, dramatically reducing the time-consuming process typically associated with viewing the contents of a document or using a document previewer. Users simply hold down a keyboard "hot" key, point to a document icon from the Finder and Sneak Preview will automatically display a preview for it. Sneak Preview includes everything users need to quickly and easily create and show previews for their documents: users can instantly view the contents of any document from the Finder without having to launch an application or even own the application that created it (does not interfere with or slow down the normal operation of the user's Macintosh); previews are portable — they move with the user's documents from one Mac to the next (there are no large catalog files to manage); users can create previews quickly and easily — "drag and drop" them or let Sneak Preview make previews for all documents on their hard drive automatically; Sneak Preview's "intelligent" preview creation knows when a document has been modified and if the preview needs to be updated; users can enter a 256 character description for their documents that is optionally displayed with the preview (users can keep track of import information without having their comments lost — like Apple's Get Info — when the desktop file is rebuilt); and users can add translators for the document types they use — TIFF, PICT, EPS, JPEG, GIF, QuickTime, text and many others (easily expandable and upgradeable).

SoftwareFPU
FPU emulation utility
Any 68020, 68030, 68LC040 or PowerPC Macintosh without an FPU.

SoftwareFPU is a control panel that allows most applications that required a Floating Point Unit (FPU) to work properly on Macintoshes without one, without adding an expensive FPU card. Users simply drop the control panel into the System folder, restart, and most FPU applications that crashed or refused to run will begin working. SoftwareFPU is fully System 6 and 7 compatible. SoftwareFPU is shareware and is available from the following sources: online from America Online, CompuServe and eWorld; via anonymous ftp from ftp.netcom.com in~ftp/pub/johnneil; from local users groups; or by mail by sending registration fee to John Neil & Associates.
$10 retail; registration fee

■ Sound Advantage Built-in Mic Options
Operating system to control sound
Any Macintosh, including Power Macintosh with built-in sound input capability; System 6.0.7 or later.

Sound Advantage Built-in Mic Options operating system software allows users to control the built-in sound input port. Users just open the Sound control panel and select Options button. Users can choose sample rates, compress ratios, mono or stereo, 8- or 16-bit samples and even voice-activated recording. Users use the Voice-Activated recording pop-up controls to set the sensitivity level and the delay to automatically stop recording when they are finished speaking. This helps to keep recorded sound file sizes small by not recording extended silence. Included is an application that combines a voice messaging notepad with a sound editor. Users choose between the messaging notepad and the sound editing views with a click of the mouse. Users can import Audio IFF files and sound resources; and export sounds in several formats, including System 7 sound file. An Audio IFF and Mini Application is included for sending a sound to others that do not have Sound Advantage. The messaging notepad can be used to quickly create voice messages that can be sent to other users on the network by using System 7 file sharing or electronic mail.

SoundPlay 1.02
Utility to play sound resources
Macintosh Plus or larger; 1 MB of RAM; 800K floppy disk drive (hard disk drive recommended); System 6.0.3 or later.

SoundPlay is a small utility that allows users to locate and play "snd" (Format I/II synth sound) resources in resource files, applications or SoundFX sound libraries. Documentation is included.
$16 retail
Hologlyph, Inc.; PO Box 1305; Arvada, CO 80001; 303-422-9082, 800-283-9082 or 303-422-4366 (fax)

Spectator
Provides real-time, live-action screen capture
Macintosh LC or larger; 2 MB of RAM; hard disk drive; QuickTime; System 6.0.7 or later.

Spectator provides real-time, live-action screen capture. It watches over a user's shoulder, making a QuickTime movie of everything that happens on the Macintosh screen, even creating its own soundtrack with mouse clicks and beeps. Spectator will then let users edit both the video and audio portions of the movie to make their own training films. Users can also import existing QuickTime movies, mix them with their own work and then save them as self-running applications.
$149.95 retail
Rock Ridge Enterprises; 620 Hidden Valley Dr., #102; Ann Arbor, MI 48104; 313-663-0706 or 313-663-8403 (fax)

Square One
Organize the Macintosh in a flash
Macintosh Plus or larger; System 7.0 or later.

Square One is a power-launcher that organizes users' favorite files into an easy-to-use icon palette. Users get instant access to their vital documents. They can double-click on any item in the palette to launch it; add applications, documents, folders, control panels, QuicKeys or any file they want; and group a set of applications and documents into a project workgroup and launch them all with one double-click. The palette is always handy — users just drag the mouse to a Hot-Corner or hit a Command-Key.

Star Trek, The Screen Saver
Screen saver
Macintosh Plus or larger.

Users can help their screens "Live Long and Prosper" with Star Trek, the Screen Saver. Captain Kirk, Mr. Spock, Dr. McCoy and the crew of the U.S.S. Enterprise join forces with trilling Tribbles, burrowing Horta and Klingon warriors to protect monitors from phosphor burn-in. When computer monitors are left on but unattended, static images can "burn in" to a screen, causing permanent damage. Star Trek, the Screen Saver prevents burn-in by displaying animated screen art. This collection of high-quality graphic displays uses the actual sounds and images from the original Star Trek TV series. It also includes a password security system so users can screen-lock their computer, plus message and random display capability. Star Trek, the Screen Saver is a stand-alone product and does not require After Dark software, but will run all After Dark displays.

StickyBusiness
Layout program for labels, cards, tags and envelopes
Macintosh Plus or larger; System 6.0 or later.

StickyBusiness is a versatile, easy-to-use program for designing and printing professional labels, cards, tags and envelopes. Predefined templates support hundreds of stocks (mailing, shipping, file folder, serial number, audio and VHS cassette labels; convention badges; rotary index; 3 by 5 cards; and post cards) from Avery, Moore, Inmac, Nebs, Dennison, Rolodex and others. Users can define their own templates for custom stocks. The "draw" environment lets users quickly create text, serial number and graphic objects with patterns and colors. Users can import icons and graphics in bit-map, PICT, PICT2 and EPS formats; and print-merge with data from spreadsheets and database programs. StickyBusiness is System 7 compatible.
$100 retail
Williams & Macias, Inc.; 3707 S. Godfrey Blvd.; Spokane, WA 99204; 800-752-4400

StickyBusiness Plus
Layout program for labels, tags, cards and envelopes with automated postal formatting and built-in bar-code generator
Macintosh Plus or larger; System 6.0 or later.

StickyBusiness Plus provides all of the features of StickyBusiness, plus automated postal formatting and built-in bar-code generator. The package includes dot matrix and 300 dpi PostScript fonts for Code 39, Code 128, Interleaved 2-of-5, UPC-a, UPC-E, EAN-8, EAN-13, ISBN, UPC Shipping Container Code, UCC Shipping Container Code, OCR-A, OCR-B, USPS PostNet and USPS FIM. Bar code generator automatically adds all guardbars, checksums and other special characters. Postal formatting tool provides instant, accurate positioning of FIM, PostNet and business-reply bars and OCR address block. More than 600 predefined templates supports label and paper stocks from numerous manufacturers; and users can define their own custom templates. A "draw" environment allows creation of text, serial number, graphic and bar-code objects. Users can import icons and graphics in bit-mapped, PICT and EPS formats; and print merge with data from spreadsheet and database programs. StickyBusiness Plus is System 7 compatible.

StuffIt Deluxe 3.0
Complete file compression, encryption and archiving
Macintosh Plus or larger; System 6.0.5 or later.

StuffIt Deluxe — the complete compression solution — is an easy-to-use program for compression, encryption and archiving. Files will compress up to 1/20th their original size, with 60 percent the average. It includes StuffIt SpaceSaver, compression software that can transparently double a user's disk space. Users simply add a few letters to a folder name and it's a StuffIt archive. While most use it to save time when sending files across modems and networks, others use StuffIt Deluxe to save disk space.

Super 7 Utilities
Seven performance enhancement utilities
Macintosh Plus or larger; System 7.0 or later.

Super 7 Utilities adds capabilities to the Finder and other applications that users won't be able to live without and won't find anywhere else. Mighty Menus allows users to "tear off" menus from the menu bar and place them anywhere on the display, including WYSIWYG-type menus and hierarchical menus. Window Master automatically stacks or tiles all windows in a neat and organized pattern. Super Comments lets users add personal notes to any file in all "Open," "Save" and "Save As" file dialogs. Alias Assistant eliminated "orphaned" aliases forever and allows user to reconnect existing aliases. Speed Beep Pro allows users to assign multiple sounds to just about any System Event. Helium Pro lets users toggle Balloon Help on or off with a press of a key. Desktop Extras adds a new menu to the Finder for faster filing.

SuperCache
High Performance Optic & CD-ROM Driver Software
Macintosh Plus or larger.

SuperCache is comprehensive driver software. Whether users are using a CD-ROM or rewritable optical driver, SuperCache pushes performance to its peak. CD-ROM hard disk caching moves vital and frequently used information from a CD-ROM drive to a hard drive, giving the computer faster access to it. For optical drives, features such as Dynamic Volume Encryption protect data from unauthorized users, while features like QuickMount and on-the-fly formatting and partitioning make it easier. One comprehensive package does it all. SuperCache is compatible with System 6 or 7, file sharing, AppleShare and just about any configuration users can give it.

Synchronize! 3.1
File synchronization utility
Macintosh Plus or larger; System 6.0.2 or later.

Synchronize! is a file synchronization and backup utility designed for people who work on more than one Mac. It automatically keeps the documents on two or more Macs up to date, by copying the newest version of those documents to the other Mac. Synchronize! will also back up a folder or an entire disk to another, removing any files that don't exist on the primary disk. Synchronize! can automatically connect to a remote file server or a Mac with File Sharing, synchronize or back up files and disconnect, at a preset time or periodically. All passwords can be entered in advance, so the synchronization can be done any time day or night. Synchronize! runs on all Macs, including Quadras, PowerBooks and Power Macs. It works with System 7, supporting Balloon Help, Apple Guide, Apple Script and Drag and Drop. Upgrades are free when downloaded from an online information service.

Tapestry 1.3
Custom pattern installer
Macintosh LC or larger; color QuickDraw; System 6.0.5 or later.

Tapestry is a control panel that lets users change the patterns on their Macintosh desktop. It can install much larger patterns than are available in the General control panel, up to 256 by 256 pixels. It is designed to introduce a splash of color into anyone's daily computer work. Tapestry comes with more than 150 different patterns, such as wood paneling, cobblestones, dinosaurs, modern art and skylines. It includes a randomizing feature that can select a different pattern each time the Macintosh is turned on. New patterns can be created by pasting in pictures or importing images from picture files, resource files or other types of pattern files. There is also a palette editing feature that allows users to customize patterns by changing the colors used in the pattern.

TattleTech
Aids technical support people in gathering critical information about a customer's system
Macintosh Plus or larger; System 6.0.4 or later.

TattleTech software is designed to aid technical support people in gathering critical information about a customer's system. TattleTech provides very complete information about Macintosh hardware and its system related software. The information can be viewed on screen by category, printed or written to a text file, a special bug report format or tab-delimited format. TattleTech is also configurable. The configuration program allows users to determine available categories and default reports and specify software and folders that users want listed. The resulting size of the TattleTech can be as small as 80K compressed. TattleTech can be used in beta testing. It can also be configured as a "faceless" application with various levels of user interaction and progress notification. Information categories include: General Hardware Configuration; Volumes + Drives; Monitors; NuBus Devices; SCSI Devices; ADB Devices; Serial Ports; Start-up Environment (boot blocks, INITs that loaded, other System files [System, Finder, cdevs, etc.]); General System Software Configuration; Active Processes; DAs, Fonts; Drivers; Traps; Open Files; and Custom File Information.

This Mac Is Mine
Customizing resource to soup up a Macintosh computer's sights and sounds; book/disk package
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.3 or later.

This Mac Is Mine, by John Pivovarnick, is a customizing resource that lets users soup up the sights and sounds of their Macintosh. It is a light-hearted guide to changing the look and feel of the Macintosh, and gives users everything they need to get started. The book first covers the customizing options that come with every Macintosh (System 6 and 7), then explains how to install, use and play around with the programs on the disk. It wraps up with a section on additional sources for more software, images and other accessories. The disk includes 12 programs that show users how to record their favorite sounds and voices and install them on the computer with the Sound Manager Package; customize windows, menus and dialog boxes to reflect a user's personal style; take paint, draw and image files from nine different formats and turn them into start-up screens with GIFConverter; and much more.

Toner Tuner 1.0.6
Printing utility that saves on printer toner and ink expenses
Macintosh Plus or larger; System 6.0 or later.

Toner Tuner is a toner saving printing utility. It enables users to control the darkness when printing "draft" copies of documents on PostScript and non-PostScript (laser and ink jet) printers. Printing lighter copies saves printer toner or ink, necessitating the purchase of fewer toner or ink cartridges or ribbons. (In addition to the cost benefits, using fewer toner and ink cartridges is good for the environment.) Toner Tuner is a System Extension that adds a control to the standard Print Dialog of Macintosh applications. The slide-bar control lets users adjust the darkness before printing draft copies.

Traffic Controller Personal 1.01
System 7 utility
Macintosh Plus or larger.

Traffic Controller Personal is a System 7 utility that will manage and allow users to display a graphical representation of the Publish and Subscribe Edition relationships. It will monitor the Editions on a single CPU, showing the data in a visible display. Traffic Controller Personal is also able to save the data for each iteration for backup and retrieval purposes. System 7's Publish and Subscribe abilities allow for transparent, continuous updating of information. Unfortunately, users may need one particular iteration that has already been modified. With Traffic Controller Personal, users can retrieve the information they need and reuse it.

Translate-CGM
Graphics translation application
Macintosh II; A/UX.

Translate-CGM is a comprehensive graphics translation application that provides users with the capability to convert vector-based graphics files from product design environments to Computer Graphics Metafiles (CGMs) for archiving, hardcopy output or view-only display environments. IGES, DXF, HPGL, PostScript and CalComp formats can be directly converted to CALS-compliant CGMs before being imported into many publishing and other popular applications. Once users have a CGM file, whole new vistas are opened for display and hardcopy output, using full-featured CGM display interpreters and printer spooler front ends, such as ATC's CGM-View.

Turbo View 1.06
Graphic utility
Macintosh 512KE or larger; 1 MB of RAM; hard disk drive recommended.

Turbo View is a graphics viewing desk accessory. It can open MacPaint, PICT, Startup Screens, GIF (Graphic Format Interchange) and RLE (Run Length Encoded) pictures. It can then save the graphic in either MacPaint, PICT or Startup Screen format. An eraser and pencil for minor touch-ups and 32 levels of FatBits for close-up work are provided. Turbo View also allows copying and pasting to the Clipboard for convenient placement of graphics into other applications. Because GIF pictures can contain up to 256 colors, they are reproduced in black and white using one of six user-selected dithering methods. Color is not used on Macintoshes that support color. Turbo View supports GIF89a.

Twelve-C
HP-12C financial calculator emulator
Macintosh SE through IIci.

Twelve-C is a complete Hewlett-Packard 12C financial calculator emulator that replaces the standard Apple Calculator. It includes more than 100 preprogrammed functions, as well as the ability to enter a series of keystrokes as a program, store it in memory and execute it with a single command. Banking functions include: present and future loan value, interest rates, compounding frequency, mortgages, balloon payments, periodic savings and more. Business functions include: statistical mean, standard deviation, linear estimates, weighted average, periodic cash flow and other statistical and planning functions. Investment functions include: bond purchases, depreciation, purchase vs. lease calculations, margins, discounts and other stock and bond related functions. Twelve-C is System 7 compatible.

UnderWare
Combines traditional screen-saving capabilities with desktop animation and desktop pattern customization
Macintosh with 68020 processor or larger; 4 MB of RAM; System 7.0 or later.

UnderWare is a wacky and wild desktop animator, interactive screen saver and background customizer that runs animation on the desktop, under the windows and icons. UnderWare brings the fun of the original Macintosh back with desktop animation. Now the area under the windows and icons can entertain users with dinosaurs walking through a prehistoric landscape, footballs bouncing in three-dimensional space, rubber chickens flying in formation — more than 25 modules. UnderWare's animation interacts with the Macintosh environment. Imagine a fire-breathing dragon melting the trash can or folders walking off the screen. The variety is astounding: dinosaurs, butterflies, pixies, dragons, ballerinas, robbers, flying saucers, babies and rubber chickens are just a few of the characters that will play on the screen. UnderWare also customizes the desktop pattern with more than 75 professionally-designed patterns, including marble tiles, cyberspace and many more wonderful designs. Plus, UnderWare runs After Dark modules.

Useful Voice Processor For Macintosh
Turns a Macintosh into a true dictation machine
Macintosh with 68020 processor or higher with sound input device (Macintosh LC or larger); Useful Voice Processor Lite requires Macintosh II or larger; 1 MB of RAM; System 7.0 or later.

Useful Voice Processor turns a Macintosh into a true dictation machine. Using the computer's built-in microphone, UVP records a user's thoughts, ideas, notes, letters and lectures as sound files on disk. Useful Software's proprietary automatic silence elimination automatically eliminates the pauses from a user's speech, reducing the amount of disk space required. Sound can be further compressed using either Apple's standard compression algorithm (MACE) or Useful Software's proprietary compression algorithm. Compression of up to 12:1 is possible. UVP can import and export sound as AIFF/AIFF-C files. Transcription mode allows users to play back the sound while they type, with control of the playback possible from the keyboard. The transcription is stored in a separate document from the sound and may be read by any word processor. UVP supports the required Apple Events and complete Balloon Help.

Useful Voice Processor Lite is the perfect companion to Useful Voice Processor. UVP Lite allows users to transcribe any UVP "tape" document. Compressed sound is automatically decompressed, and eliminated pauses are remembered on playback, with UVP Lite optionally pausing in the same places. Playback can be slowed down or sped up to match a user's typing speed. The transcription is stored in a separate document from the sound and may be read by any word processor. UVP Lite supports the required Apple Events and complete Balloon Help.

VendorSystem
Enables developers to "lock" multiple applications on a single CD-ROM disc
Macintosh with 2.5 MB of free RAM; System 6.0.5 or later; CD-ROM drive.

VendorSystem — Desktop Delivery Technology, is an advanced encryption technology that allows multiple software programs to be "locked" on a single CD-ROM disc. Customers can demo the software contained on the disc to decide what to purchase. To access the software, the customer calls a customer fulfillment center. Upon payment using a credit card or electronic transfer, the user receives a unique access code to "unlock" the selected program(s) for immediate desktop use. The VendorSystem technology has been licensed by the world's leading distributors, resellers and software developers. VendorSystem guarantees 100 percent user registration, lowers costs of goods and increases sales and marketing potential. The VendorSystem is available for Macintosh, DOS, Windows, Unix and OS/2 developers.

Videodisc Accessory Series
Desk accessory that runs laser disc players from a Macintosh
Macintosh Plus or larger; videodisc player with RS-232 interface.

The Videodisc Accessory Series is a desk accessory that allows a user to control a laser disc player while working in any Macintosh applications. Besides still frame, search, slow, scan, fast forward and reverse, the DA features other capabilities, such as providing text overlay where the player supports this and allowing users to set and play sequences repeatedly, even in reverse. The Videodisc Accessory Series includes three desk accessories that are tailored specifically for the following videodisc player sets: Pioneer 2200, 4200, 4100 and 8000; Pioneer 6000 Series; and all Sony industrial players.

■ **VideoJuggler**
Video word processor
Macintosh Classic or larger; System 6.0.5 or later; Pioneer Laserdisc Player model CLD-V2400, CLD-V2600, LD-V2200, LD-V4200, LD-V4400 or LD-V8000.

The VideoJuggler is a new type of "video word processor" that lets users quickly and easily put "markers" for laserdisc video clips right into its text files. Users can then access any marked video clip on demand by simply double clicking to "select" the corresponding marker. The VideoJuggler provides users with a simple, "do-it-yourself" method for controlling access to videodisc clips, using informal notes that are much more interactively adaptable than traditional multimedia control files. Both CAV and CLV videodisc modes are supported. Users can use VideoJuggler to mark and access frames on multimedia discs and real-time clips on their favorite movie discs.

VST ThinPack Utilities
Battery-management software
Macintosh PowerBook (models 100 through 180c); System 7.0 or later.

ThinPack Utilities is battery-management software for the PowerBook. Designed to work as a stand-alone utility or with the VST ThinPack battery, TP Utilities recalibrates Apple's notification alerts to allow the PowerBook to recognize the longer runtimes afforded by the ThinPack. In addition, ThinPack Utilities provides a truly useful graphic feedback mechanism to enable users to see at a glance and in real time the state of charge of their battery. This thermometer-like display uses the full width of the screen to illustrate the current state of battery charge relative to Apple's battery notification alerts. ThinPack Utilities also polls the PowerBook constantly to provide current information on the several parameters of computer operation (e.g., AppleTalk on or off, CPU speed, etc.) that affect energy consumption. Thus users have a constantly updated, complete "status report" on their battery and the (user-controllable) factors that affect the longevity of the battery.

Wallpaper
Utility for displaying large color patterns on the Macintosh desktop
Any color-capable Macintosh; System 6.0.5 or later.

Wallpaper allows users to customize their work environment by displaying a customized desktop pattern on their monitor that can be up to 128 pixels square and up to 256 colors per pattern. Users can create their own patterns in the paint program, copy and paste into Wallpaper from any other program or capture anything on the Macintosh with Wallpaper's grabber tool to instantly create a Wallpaper desktop pattern. Users can set Wallpaper to randomize — changing patterns up to once a minute from among a user's favorite. Wallpaper is fun to use and has an easy and fun interface. More than 520 patterns are provided with the program, and users can create as many of their own as desired.

Wallpaper/Zebra Edition contains the identical application program to Wallpaper, but the close to 500 patterns supplied are black and white for monochrome monitors. There is a wide scope of art supplied for people running Macintoshes that are color-capable but have a black and white monitor.

More Wallpaper contains almost 600 new outstanding patterns for Wallpaper owners. Included are many scans and photos, animals, hand-drawn art, gray scales for the musically inclined, as well as soft, quiet textures, marbles, tiles and woods. There are color-me's for family fun. The desktop menagerie includes dinosaurs, cats, bears, kangaroos, dogs, penguins, parrots, horses, insects and the odd mandrill. Among the fabrics are a Navajo blanket and plaids. Tablecloth and food patterns are also provided.

Wiz Tools
Utilities that enhance System 7
Macintosh Plus or larger; System 7.0 or later.

Wiz Tools includes nine utilities that enhance System 7. ColorSwitcher lets users switch between two pre-set screen displays without going to the Monitors control panel. FinderTools lets users add shortcuts to the Finder menus, switch applications or access the Application menu at any time. Keystroke Recorder permanently records everything a user types in a 24-hour period. Launcher provides fast access to applications, documents, desk accessories, folders, control panels, etc. PowerBook Utilities provides special icons or cursors to inform users when the Caps Lock key is activated, or when the hard disk wakes up. A menu bar icon indicates the level of the battery. SubMenu displays the contents of the Apple menu hierarchically by creating up to five levels of submenus. Twins lets users back up and synchronize data quickly and reliably to any other HFS volume. It will check the differences between two volumes, reconcile their data and copy the most recent file onto the other volume. WatchFolder watches any shared folder and alerts users when it is modified. WorldClock displays the time for different geographical areas worldwide.

Working PrintLogger/Working PrintStamper 1.0.3
Printer-use accounting, billing and security utility
Macintosh Plus or larger; System 6.0.9 or later.

Working PrintLogger keeps a log file of all printer use, including fax modems. The log file contains information about time, date, number of pages, user name, job, client, project name, printer used and the name of the document printed. The log file is text with tabs between columns, so it can be imported into spreadsheets and database applications for accounting purposes. Working PrintStamper prints similar information about the document on the bottom of every page. Working PrintLogger and Working PrintStamper can be used together or separately.

Xtras For System 7
Book/disk package; collection of 13 original utilities
Macintosh Plus or larger; System 7.0 or later.

With the advent of System 7, Macintosh users have been left without many of the utility programs they have come to depend on to save time and enhance productivity. Xtras for System 7 by Sharon Zardetto Aker remedies that situation with a collection of 13 original utilities written exclusively for this book/disk package. Some of the utilities include: Big Apple, a hierarchical Apple menu that provides multiple levels of access to items in the Apple Menu Items folder; Icon Editor, a pop-up icon editor for desktop icons; Publishist, lets users publish and subscribe between two programs when only one of them has the feature built in; and Startup Startup, enables those using both System 6 and System 7 on separate drives to specify which system they want to use when starting up. These and nine other utilities make this package an excellent value for System 7 users.

Clients & Profits ez
Job tracking, costing and billing for advertising agencies and design studios
Macintosh Classic or larger; 1 MB of RAM; hard disk drive; LaserWriter or other printer.

Clients & Profits ez is a job tracking, costing and billing system that also manages an agency's books. It includes everything needed to run small ad agencies, design studios, public relations firms and production companies with up to five employees and $1 million in billings. The software is based on Clients & Profits 4, the original agency management system, and features job estimating and scheduling, accounts payable and checkwriting, job billing and accounts receivable and agency bookkeeping. Clients & Profits ez is a single, integrated program, so there are no costly modules to buy. As the agency grows, Clients & Profits ez can be upgraded to manage agencies with up to $99 million in billings. Estimates, invoices and statements print on letterhead on either a LaserWriter or ImageWriter. Other reports include: job summary; job schedule; job progress; detailed job costs; job billings; job list by client, job number or status; traffic; currently billable (work in progress); job profitability by task, client or job; activity by job or client; profit and loss; cash flow for payable and receivables; vendor and client account agings; time lists and summaries; and client, vendor and resource lists.

Daily Newspaper Publicity Database-On-Disk
Publicity database of 1,600 U.S. daily newspapers
Macintosh Plus or larger; hard disk drive; System 6.0 or later.

The Daily Newspaper Publicity Database-On-Disk is a compiled mailing list of all 1,600 daily U.S. newspapers. Businesses seeking free publicity for their products or services can use this list to mail their press releases effortlessly to each newspaper without spending days researching names and addresses at their local library. For convenience, a run-time version of the FoxBase+/Mac database manager is included, but the records provided can be easily merged into almost any well-known database program a user desires. The list has been used successfully to promote products and services of all kinds.

Macintosh Party Publicity Disk Service
Monthly compilation on diskette of press releases, articles and industry information
Macintosh Plus or larger; hard disk drive; any page-layout program.

MacPublicity Network distributes a monthly disk filled with press releases, articles and industry information for 3rd party vendors seeking exposure for their products. The diskette is mailed free to more than 1,200 Mac user group newsletter editors serving an audience of 300,000 members. Participating vendors provide their own press releases, articles or reviews, which are compiled with other industry information and mailed free to user group editors for printing in their publications. Because most user group newsletter editors are volunteers, they frequently don't have the time to write their own articles or to search for them online. Downloading them from diskette makes their job easier and provides a meaningful outlet for vendor information. Other media-related services are available.

MacSwami
On-computer business card
Any color Macintosh.

MacSwami is an "on-computer business card" for Macintosh dealers to load on every system that they sell. It is entirely customizable to each dealer with rotating 3-D logos on start-up screen, salesperson specific information (photo, name, phone, hours, location, etc.) and customer definable scrolling or "slide show" directory screens pertaining to sales and/or support information — class offerings, service prices, etc. Built-in diagnostic tells customers about their computer configuration, including software version, memory, INITs and CDEVs (great when calling in for support). Top Ten list gives solutions to 10 most commonly asked questions from dealers phone support lines. MacSwami is custom created to order on a subscription basis.

MPMS 7.0
Publishing/advertising management
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

MPMS (Multiple Project Management System) initiates and manages media or collateral production projects. When a project is created and defined, internal deadlines are automatically established for critical project dates. Users can create optimal, yet realistic workflows for different project types. MPMS' Deadline Forecaster flags logjams before they occur, "aware" that an employee or workgroup may be involved in several projects simultaneously. Estimates are done online, from live input and comparison to past performance. All documents in progress are "moved" along with the job from user to user. Internal time and outside costs that must be recovered are constantly compared with projected estimates for cost control as work progresses. Project status reports are up to the minute. A final cost summary is produced, an invoice is printed and automatically posted into A/R. MPMS also provides important management statistics, including project production and performance analysis, such as average job time by type of job, as well as overall employee and department performance figures.
$595 retail; single user
$179 retail; each additional user (minimum two)
Synergy Marketing Communications, Inc.; 11 Joseph Ct., Ste. 213; Syosset, NY 11791; 516-935-9151 (phone/fax)

NameMax
Creates corporate or product names
Macintosh Plus or larger.

NameMax assists users in the creation of names for companies, products, subdivisions, etc. There are two modes for creating potential names. The first is Alphabetic with random letter generation. This allows a user to select the number of letters to be generated for possible names, vowel/consonant placement and the placement of particular letters. In the Word Parts mode, users have access to 100 different databases of syllables, each categorized under descriptors, which can be matched in possible combinations for potential names. Users can even add their own specialized database of words and word parts.

PR Master Pro
Complete package to manage a public relations firm
Macintosh Classic II 4/80 or larger; System 7.1 or later.

PR Master Pro provides a mailing list manager, mail-merge program, time sheet module, tour manager, invoice generator and auto-fax capability. The extensive mailing list manager handles all mailing list needs, including saving search-and-sort criteria. Each contact in the system can belong to an unlimited number of lists and each contact file tracks up to 10 phone/contact numbers, as well as business and home addresses. The time sheet module allows users to track account exec hours and billings by client and by project; the invoice generator will then produce invoices for these (as well as other) charges. Auto-faxing allows users to send communications out via modem overnight and provides a report the following day.
$1,495 retail; single user

PR/Works 4.0
Application for PR practitioners that combines contact management, database and activity tracking into an integrated workday management package
Macintosh Plus or larger; hard disk drive.

These Products Available Through Bottom Line Distribution
1-800-347-1923

PR/Works is software for the management of public relations activities that combines on-screen call and task management, relational database and activity tracking into an automated work environment that supports most facets of the public relations practitioner's normal workday. Features of the system include: unlimited-length notepad areas throughout the database; on-screen editorial calendar item capture and tracking; subscription and editorial calendar processing; mailing list and mail-merge capabilities; import/export access to external media directories; and a call and task management system that is linked to the database for two-way transfer of contact and daily activity information.

SilentPartner Basic 7.0
Financial/business management software for photographers, designers, smaller agencies and virtually any service business; single or multiuser
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

SilentPartner Basics is financial and business management software for photographers, illustrators, designers and smaller agencies. It tracks vendors, payables and receivables, plus more. SilentPartner Basics lets users enter information a single time, and then transports it every place users need it to be. The program will help users market their services; keep their calendar full and their mind clear; develop and track estimates and invoices; and generally manage projects and money with ease. It even has Help buttons everywhere and a mini word processing program for letters. New in 1993 are inventory and custom security.
$1,195 retail; price depends on system size (users)
The Medi Group, Ltd.; 180 Black Rock Rd.; Oaks, PA 19456; 610-666-1955 or 610-666-5911 (fax)

SilentPartner Big Time 7.0
Financial/business management software for the creative service industry; single or multiuser
Macintosh Classic or larger; 6 MB of RAM; hard disk drive.

SilentPartner Big Time provides professional help for creative minds. It handles vendor, payables and receivables tracking, plus more. Big Time lets users traffic and adapt project timelines at the touch of a button. Its accounting sophistication lets users do everything from multiple vendor markups and POs to progress billing and checking profitability on and scheduling of individual tasks. Big Time also lets users ask it anything it knows and then generates completely customized reports. Help buttons are available at every level. New in 1994 are inventory, media management and custom security.

The Medi Group, Ltd.; 180 Black Rock Rd.; Oaks, PA 19456; 610-666-1955 or 610-666-5911 (fax)

Talking Business Card
Custom multimedia presentation
Macintosh II family; 4 MB of RAM; 13-inch color monitor.

The Talking Business Card is a custom multimedia presentation with sound, graphics, animation and even digital video, that fits on a floppy disk for the Macintosh or Intel-based PC. The Talking Business Card is an ideal vehicle for delivering a promotional message, introducing a new product or generating interest. Talking Business Cards allow an audience to experience a user's message and can be distributed at trade shows or via mail or online services. Due to its digital form, high-impact graphics and interactivity, Talking Business Cards enjoy a much greater pass-along value than conventional media. Galileo, Inc. provides turn-key creative and production services, including design, programming, packaging and collateral materials.
$7,500 to $15,000 retail; price depends on how much original material must be created (call for free sample)
Galileo, Inc.; 3350 Peachtree Rd. NE, Ste. 1550; Atlanta, GA 30326; 404-816-9885 or 404-816-5690 (fax)

Vertical Markets/ Architecture

ADS-MGMStation—Architecture
Architectural symbols
Macintosh 512K or larger.

ADS-MGMStation—Architecture is a comprehensive compilation of architectural symbols. The 22 libraries containing more than 700 symbols are extremely versatile. The symbols are designed in plan and elevation form in conformance with ANSI standards and can be accessed by the mouse to any position on a drawing. The symbols can be altered to any scale, angle or dimension, providing complete flexibility for manipulating all components of a drawing. The symbols are precise representations of the most commonly used architectural templates for plumbing, doors, windows, electrical, materials, welding, graphics, etc. Included in the package are libraries with complete bathrooms, kitchens, furniture, symbols, landscape symbols, fireplace and stair systems.
$195 retail
Compu-Arch; 1954 Cotner Ave.; Los Angeles, CA 90025; 310-312-6632 or 310-444-9577 (fax)

ADS-MGMStation—Interiors
Interior design symbols
Macintosh 512K or larger.

ADS-MGMStation—Interiors is a compilation of interior design symbols. There are multiple libraries containing all key symbols, and the program allows customizing of symbols that can be created by a user for his own special applications. The symbols are designed in plan and elevation form and are accessed by the mouse to any position on a drawing. The symbols can be altered to any scale, angle or dimension, providing complete flexibility for manipulating all components of a drawing. The symbols are precise representations of the most commonly used interior graphic templates and are in conformance with ANSI Standards. The more than 15 libraries include basic furniture, office furniture, lighting and lighting plans, fixtures, kitchen, bathrooms, pools, outdoor equipment, wood and tile patterns, appliances, parking and cabinets.

Compu-Arch; 1954 Cotner Ave.; Los Angeles, CA 90025; 310-312-6632 or 310-444-9577 (fax)

Alias Upfront V2.0
Step-by-step, three-dimensional drawing program
Macintosh Color Classic or larger; 4 MB of RAM (8 MB of RAM, math coprocessor and color monitor recommended).

Whether a professional designer who works with perspective or someone who just wants to play in 3-D, Alias Upfront lets users easily draw fully shaded 3-D objects, then explore their ideas as they look from any point of view. Users simply point and click and let Upfront tell them exactly where they are as they draw interactively in 3-D. Shadows and perspective are automatic. Step by step, Upfront lets users create 3-D perspectives with ease. To further visualize ideas, Alias SpiderVision can be used to quickly set up a camera path and view scenes in motion as QuickTime movies. When happy with the results, users can print directly in color or export to other graphic programs, such as Adobe Illustrator or Fractal Design Painter, where text and notes can be added or an image can be further enhanced. Drawing in 3-D is fast, easy, accurate and fun with Alias Upfront. Alias Upfront also imports PICT, 2-D DXF or 3-D DXF files and exports to EPSF, PICT, TIFF, RenderMan, Swivel command, Architrion and 3-D DXF.

Alias Research, Inc.; 110 Richmond St. E; Toronto, Ontario, Canada M5C 1P1; 416-362-9181, 800-447-2542 or 416-362-4696 (fax)

ArchAccount
Billing and job costing for architectural firms
Any Macintosh; ImageWriter or LaserWriter.

ArchAccount provides billing and job costing for small architectural firms. Three billing methods are provided: percentage of construction cost, professional fee and direct personnel expenses. The program maintains and supports a complete project history of time and expenses, from which two reports are generated: a detailed report of each project and a summary report of all projects.
$295 retail; program
$30 retail; demonstration package
The Gardner Partnership, Architects; PO Box 549; Cedar City, UT 84720; 801-586-9494 or 801-586-9499 (fax)

ArchiCAD 4.5
Solid modeling, integrated architectural CAD program
Macintosh with math coprocessor; native mode on PowerPC.

ArchiCAD is a high-end architectural building modeler that optimizes the design process by integrating any plan with a three-dimensional database that provides automatic elevations, sections and rendered perspectives and animations. In addition, the program can generate a bill of materials and cost estimations with a simple menu command. ArchiCAD makes the design process more intuitive by working the way architects and builders do, using walls, slabs and roofs, with libraries for specific objects like windows, doors, furniture, stairs, etc. Through its GDL, a programming language for creating 3D objects and macros, an unlimited number of customized objects are possible. The program includes PlotMaker, 600 object library and one-year technical support and software upgrades
$4,450 retail; site licensing and discounts available
$495 retail; student version
Graphisoft; 400 Oyster Point Blvd., Ste. 429; So. San Francisco, CA 94080; 415-266-8720, 800-344-3468 or 415-871-5481 (fax)

Architectural Blocks For AutoCAD
Block libraries
Macintosh II or larger; AutoCAD Release 10, R11, R12.

Architectural Blocks consists of four two-dimensional block libraries for use with AutoCAD: Interior Components, Interior Furnishings, Exterior Components and Specialties. A three-dimensional library, 3D Blocks, is also available. All are .DWG or .DXF format. Each of the four two-dimensional libraries contains symbols in plan and elevation, selected for AutoCAD users with specific block requirements. The Interior Components library includes 275 blocks covering a range of fixtures, such as bathroom fixtures and accessories, and commercial and residential appliances. The 150 blocks in the Interior Furnishings library include commercial and residential furniture, indoor plants and office equipment. The Exterior Components library contains 200 blocks of trees, figures, vehicles and other outdoor symbols. The Specialties library includes more than 140 specialty symbols, covering retail storage and shelving, health care equipment, civic and public works symbols and handicapped ramps, stalls and residential layout. The 3D library includes more than 280 three-dimensional blocks that cover a full range of commercial and residential applications, including office equipment, furniture and sitework.
$199 retail; 2D Blocks
$199 retail; 3D Blocks

Architrion II, Release 5.8
Professional integrated CAD software for architecture and the building industry
Macintosh with a math coprocessor (PowerPC native version available); 8 MB of RAM (12 MB recommended); hard disk drive; System 7.0 or later.

Architrion is integrated architectural CAD software developed for architects, interior designers, urban planners and builders. Architrion provides an advanced 3-D modeling environment that is both fast and simple to use. Models can be created and modified in section or plan view and visualized from any perspective angle. Tools can be used in combination for intricate and accurate positioning of building elements. The built-in heliodon allows for accurate shadow studies. A complete architectural drafting module takes care of production drawings. Sections, plans and elevations are automatically extracted from the model and used as the basis for working drawings. The 2-D module includes a full set of drafting tools, complete DXF transfer

capabilities, plotter and printer drivers, symbol libraries, etc. Among many other new features, Release 5.72 incorporates a new photorealistic rendering module with multiple light sources, ray tracing, reflections and refractions, texture mapping and a whole new array of rendering tools. It also allows users to record walkthrough sequences as QuickTime movies. Architrion's integrated modules enable users to explore, visualize, document, quantify and communicate their designs simply and efficiently.
$4,495 retail; includes a one-year technical support hotline
BAGH Technologies; 6700 Parc Ave., Ste. 250; Montreal, Quebec, Canada H2V 4H9; 514-273-0522, 800-561-0522 or 514-273-3059 (fax)

Art EPS "Architectural And Landscape Graphics"
Architectural plan symbols
Any Macintosh; Adobe Illustrator, MacDraw or compatible.

Art EPS are PostScript architectural plan symbols in Adobe Illustrator format for designing or illustrating architectural and landscape plans, elevations and views. A complete selection of standard architectural symbols for plumbing, electrical, furniture, fixtures, windows, doors, plan symbols, trees, bushes, foliage and rocks are included. They are also available in PICT format.

Freemyers Design; 575 Nelson Ave.; Oroville, CA 95965; 916-533-9365

AuraTurn 2.0
2 axis turning package
Macintosh SE or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; math coprocessor and large, color monitor recommended; System 6.0 or later.

AuraTurn is a complete 2 axis turning package that offers powerful CNC programming tools for almost any lathe job. Every copy of AuraTurn comes complete with AuraCAD 3.4 and AuraIGES/DXF. AuraCAD and AuraTurn team up to provide complete, professional design and programming capabilities to save production time without having to learn two different software systems for CAD and CAM functions. AuraTurn's programming capabilities include a standard FANUC output for OD/ID contour turning, OD/ID groove cutting, face cavity cutting, drilling, boring and tapping processes. AuraTurn operates with easy selection of geometry by mouse with pull-down menus for all machining processes and features a built-in NC file editor, automatic computation of speeds and feeds, user-definable libraries for all OD and ID cutters, drills, taps and more. AuraTurn can store up to 10 different machine tool communications parameters and send and receive files from the machine control. Post processors for most standard controls are included. Video Assist training cassettes tutor new users in all aspects of CAD and CAM. AuraTurn can also be added to the AuraCAS Station, a fully-integrated 2 1/2 axis milling programming and computer-aided setup system for milling machines that is fast, powerful and easy to use.
$1,995 retail

Clerk Of The Works
Integrated accounting, job costing and project tracking software for architects, engineers and designers; Time and Expense, Billing and Accounts Receivable, General Ledger, Accounts Payable, Payroll
Macintosh SE or larger; 20 MB hard disk drive; ImageWriter or LaserWriter.

Clerk of the Works is an integrated accounting system for design professionals that handles Time & Expense, Billing & Accounts Receivable, Payroll, Accounts Payable and General Ledger. The program conforms to AIA guidelines and is customizable to fit a user's business. Time & Expense maintains records on staff, clients, projects by phase and task, reimbursable and non-reimbursable expenses and outside services. Billing & Accounts Receivable automatically invoices time and expense, fixed fee and percent of construction projects. Sixty-seven (67) reports are provided. Users need only input information once, and it is automatically posted everywhere in the system.

The Construction Administration Checklist
Construction inspection checklists
Macintosh Plus or larger; 800K disk drive; 20 MB hard disk drive; Microsoft Word or WordPerfect.

The Construction Administration Checklist is a comprehensive set of construction inspection checklists. It is also a documentation and management system that assures that what gets built is what is supposed to be built. It is a system that users can customize to fit their needs, and use to save thousands of dollars and endless hours of trouble in the years ahead. The checklist can be used to: check off the work that is complete, incomplete or needs correcting; remind users of every hidden part of work and coordination between trades, including materials grades and standards, proper storage, work preparation, related work, methods of installation, workmanship, repairs and cleanup; write in names, dates and problems, what is to be done and who is to do it; and use it as a ready-made punch list for closing out jobs. At the end of a job, users will have a construction observation log that will provide priceless documentation if and when claims later arise.
$75 retail
$10 retail; sample disk in Microsoft Word only (all checklists on one sample disk)
Guidelines; PO Box 456; Orinda, CA 94563; 510-254-9393

Design And Planning Checklists
Checklists of every phase of building-design decision making
Macintosh Plus or larger; 1 MB of RAM; 20 MB hard disk drive; 800K disk drive; Checklist format (Microsoft Word or WordPerfect).

Predesign And Planning Checklists is a HyperCard checklist on building-design decision making, including site work, structure, exterior construction, interior construction and fixtures and finishes. Predesign And Planning Checklist also provides the following reports: a checklist of contents for each working drawing sheet; construction notes required for plans, elevations and sections; keynotes for each working drawing sheet; a list of construction details that will be required for a job; and an outline of required specification sections. The program is coded and coordinated with CSI Masterformat.
$75 retail; Checklist (Microsoft Word or MacWrite)
$10 retail; sample disk in Microsoft Word only (all checklists on one sample disk)
Guidelines; PO Box 456; Orinda, CA 94563; 510-254-9393

Design Your Own Home: Architecture
Allows users to draw floor plans, elevations and structural details
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ImageWriter or LaserWriter optional.

Design Your Own Home: Architecture allows users to draw floor plans, side view building plans and structural details. Besides including all standard drawing tools and features, the program shows measurements related to real world sizes as a user draws. The stud/beam repeater function calculates lumber and does detail drawing in seconds, allowing users to change stud orientations and lumber sizing as they wish. Other features include: quick scanning all the plans on a user's disk; overlay (allowing layering of details, such as electrical or plumbing schematics, or second floors); rulers, grid snap and grid points; measurements in feet/inches or centimeters; auto-dimension lines; auto-scrolling; and the capability to save new windows with default configuration options for rulers, grid, scale and others. The Macintosh version comes complete with a library of predrawn architectural shapes to scale and dozens of sample building plans that can be used as is or customized.
$99.95 retail
Abracadata, Ltd.; PO Box 2440; Eugene, OR 97402; 503-342-3030, 800-451-4871 (sales) or 503-683-1925 (fax)

Design Your Own Home: Interiors
Decorating and interior furnishing software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.03 or later.

Design Your Own Home: Interiors is decorating and interior furnishing software that includes a variety of drawing tools and patterns. It enables users to plan the decor for rooms in their house from the top view and then let them view the room from four different sides. The program can display line dimensions and angles on top and side views. The program includes hundreds of pre-drawn, to-scale furniture pieces for every room in the house.
$99.95 retail
Abracadata, Ltd.; PO Box 2440; Eugene, OR 97402; 503-342-3030, 800-451-4871 (sales) or 503-683-1925 (fax)

Design Your Own Home: Landscape
Landscape design software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.03 or later.

Design Your Own Home: Landscape is landscape design software that enables users to plan their landscape using a built-in object library that includes hundreds of pre-drawn trees and shrubs. Objects placed in a top view of the property can be seen in four side-view perspectives. Plants can be aged on screen to help users determine proper placement. A variety of drawing tools and patterns are provided to allow users to customize plans.
$99.95 retail
Abracadata, Ltd.; PO Box 2440; Eugene, OR 97402; 503-342-3030, 800-451-4871 (sales) or 503-683-1925 (fax)

DesignWorkshop
Intuitive three-dimensional modeling software
Macintosh II or larger with math coprocessor or Power Macintosh; 8 to 16 MB of RAM; System 7.0 or later.

DesignWorkshop is a design-oriented 3-D modeler. Focused on the needs of architects and related design professionals, DesignWorkshop makes it possible to actually design buildings in live 3-D. Users create intuitively in a unified 3-D environment, unencumbered by complex command sequences. Solid objects and openings are created, moved, resized and reshaped graphically with the 3-D crosshair or numerically with floating-point precision. The innovative modeling interface makes DesignWorkshop an ideal conceptual modeler. Its powerful tools also allow modeling in fine detail for complete 3-D exterior and interior design definition. Rendering capabilities include fast shading and view-independent shadow-casting for design purposes, with the sun position set by latitude, date and time. The native version for Power Macintosh provides a radical 6 to 10 times performance boost for real-time modeling and viewing.
$895 retail; competitive upgrades and academic pricing available
Artifice, Inc.; PO Box 1588; Eugene, OR 97440; 503-345-7421 or 503-346-0782 (fax)

Desktop Architect 2.0
Professional detailing system
Macintosh Plus or larger; SuperPaint 2.0.

Desktop Architect allows users to assemble new drawings from predrawn components. Components are organized in individual documents called Parts Kits. Each Parts Kit is unique to detail type and contains a work space along with a corresponding note for each component. Desktop Architect maximizes the advantage of the Macintosh by providing a database, as well as a vehicle for assembling details. It is versatile enough to conform to any building type, including residential, multifamily, light commercial and commercial renovation. Parts Kits include: wall sections, cross sections, plan view details, structural steel detailing, door details, window details, interior elevations, door elevations, window elevations and roof truss diagrams.
$299 retail; includes comprehensive detail library
Desktop Architect; 27 E. Russell St., Ste. 101; Columbus, OH 43215; 614-469-9906

These Products Available Through Bottom Line Distribution

Expert Home Design
Interior design and planning software
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended for System 7); hard disk drive; System 6.0.5 or later.

Expert Home Design turns everyone into a home interior designer or planner. With a click of the mouse, furniture, windows and even walls can be easily moved or re-sized. Expert Home Design's powerful compliment of drawing tools allows users to be in complete control of the layout. Its precise measurement features can display the dimensions of objects on the screen every time they are drawn or re-sized. Expert Home Design's simple-to-use libraries offer a wide range of furniture clip art that can be easily used by simply dragging an object from the library into its new position on the screen. Expert Home Design scales the new object to a user's specified layout dimensions. Expert Home Design provides users with a 200+ piece customized furniture library (which includes office related objects), to which they can add colors and patterns as they try other arrangements. The program prints in color to Macintosh-compatible color printers.
$49.95 retail
Expert Software, Inc.; 800 Douglas Rd., North Tower, Ste. 750; Coral Gables, FL 33134; 305-567-9990, 800-759-2562 or 305-443-0786 (fax)

Expert Landscape Design
Landscaping
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended for System 7); hard disk drive; System 6.0.5 or later.

Expert Landscape Design enables even the most novice user to be his or her own landscape architect. Adding one of the more than 100+ plants in the extensive library to a layout is as easy as clicking and dragging the object to its new position. Expert Landscape Design does the rest, scaling the object for a user's specified layout dimensions. Then, Expert Landscape's powerful compliment of drawing tools take over, providing users with the power and precision to create the perfect layout. Expert Landscape Design displays the dimensions of objects on screen as users draw or re-size them, including information on an object's height, width and square area.

Expert Software, Inc.; 800 Douglas Rd., North Tower, Ste. 750; Coral Gables, FL 33134; 305-567-9990, 800-759-2562 or 305-443-0786 (fax)

Expert Office Design
Layout and planning tool
Macintosh Plus or larger; 2 MB of RAM (4 MB recommended for System 7); hard disk drive; System 6.0.5 or later.

Expert Office Design is a precision layout and planning tool for people who don't have time to learn complicated architectural design programs. Users can design offices from the reception area to the restrooms; drawing walls, windows and doors with precision. If there is an object in the program's library of business furniture elements that users would like to use, all they need to do is select the piece and drag it to its new position. Expert Office Design does all the work, including scaling the new object to a user's layout dimensions automatically. With Expert Office Design's powerful compliment of drawing tools, users are in total control of their layout. Its precise measurement and scaling controls display the dimensions of the objects on screen as users draw or re-size them for a perfect fit.

Floorplan Plus For Macintosh
Architectural drawing program
Macintosh Plus or larger; 2 MB of RAM.

Floorplan Plus for Macintosh is an easy-to-use architectural drawing program that bridges the gap between a simple paint package and a powerful CAD system. Objects, such as windows, doors, appliances and furniture, are included — or users can create their own library of objects. Users can organize their floorplan into six overlays or levels and draw up to 27 million square feet of space to one-sixteenth of an inch accuracy. Floorplan Plus for Macintosh has a sharp, distinctive look that has many commands, options and tools easily accessible with one click of the mouse. Floorplan Plus 3D for Mac will be available.

GeoCAD
Architectural application to AutoCAD
Macintosh II or larger; 8 MB of RAM; AutoCAD Release 11 and 12.

GeoCAD is an architectural application to AutoCAD. It contains symbol libraries and routines that create complete presentation and working drawings, including plans, details schedules, architectural fonts and much more. GeoCAD has a uniquely friendly graphic interface that builds on architects' skills instead of forcing them to learn new ones.
$800 retail

Geovue
Generates perspectives from elevations and plans created in AutoCAD
Macintosh II or larger; 4 MB of RAM; AutoCAD.

Geovue generates one- and two-point perspectives from simple, two-dimensional elevations and plans created in any version of AutoCAD 2.6 and later. It is ideal for perspective and massing studies and for backgrounds for professional rendering. Perspectives are created entirely inside AutoCAD. Perspectives are two-dimensional and can be edited, saved and plotted like any other AutoCAD drawing. Geovue perspectives are constructed by assembling elevations in relation to the horizon. Each elevation is selected in turn and aligned in plan. The processed plan is then placed and rotated in the Picture Plane and a perspective appears below.

Guidelines Master Detail Library
Standard construction detail components
Macintosh Plus or larger; 20 MB hard disk drive; 800K disk drive; MacDraft, MiniCad, PowerDraw.

Guidelines Master Detail Library includes more than 1,200 standard components, plus variations of parts and connectors. It is a construction kit for making thousands of original details, thousands of detail notes — including the freedom to enlarge, reduce and reshape details and components — and periodic updates and additions. Details are available as a complete set or as separate modules: Detail Module 1, site work; Detail Module 2, roofs, walls, doors and windows; Detail Module 3, interior construction; Detail Module 4, foundations and light framing; and Detail Module 5, architectural plan and elevation symbols.
$120 retail; per module ($95 each with purchase of two or more)
$450 retail; complete set

Guidelines; PO Box 456; Orinda, CA 94563; 510-254-9393

Guidelines Model Specifications
Specification checklists
Macintosh 512K or larger (Macintosh Plus or larger recommended); 20 MB hard disk drive; 800K disk drive; Microsoft Word.

Guidelines Model Specifications' features include: more than 300 pages of checklist specification data, plus references and worksheets; more than 3,000 checklist specification entries; coordination guides to engineering specifications; and no-frills specification entries written as checklists of precise instructions to contractors. Checklist specs are also construction punch lists, which help to assure that the work at a job site is built as specified, and instructions for making master specifications.
$298 retail
$10 retail; sample disk
Guidelines; PO Box 456; Orinda, CA 94563; 510-254-9393

HouseMap
Speeds up "as-built" works
Macintosh II or PowerBook; 4 MB of RAM; 40 MB hard disk drive; System 7.0 or later.

HouseMap, developed particularly for PowerBook users, is aimed at speeding up "as-built" works. Just by entering the taped measures, users can reproduce the rooms' floorplan in a scaled drawing and can verify the correctness of the assigned values directly on the site. HouseMap follows the traditional working methodology; the geometry of each room is fixed by a triangular grid, which is traced with the dimensioned walls and diagonals. In the walls — characterized by height and length — users "cut" the scaled doors and windows. Each fixed room is given a name and stored. Individual rooms are progressively assembled to reproduce the whole aggregate in one drawing. Two connection modes are provided: one by doors and the other by fixed reference points. An outer perimeter is eventually added to delineate walls. The drawing is completed by the addition of texts, dimensions, hotspots, library objects and surface calculations. All quantity calculations related to each room (dimensions/areas of the walls; size of doors/windows; and perimeter, floor surface and volume of the room) and to the whole project are available. HouseMap exports in GDL, DXF, text and PICT formats and outputs to a printer.

Landscape Library
Plan and elevation view of landscape items, as well as family, scientific and common name text labels
Macintosh Plus or larger;2 MB of RAM; hard disk drive; PowerDraw 4.0 or later; PowerCADD 1.0 or later.

The Landscape Library is one of the most complete libraries of landscape symbols and text labels available specifically for landscape architects, architects and landscape construction and design firms today. The 82 graphics libraries contain plan and elevation views of trees and shrubs, as well as rock garden symbols. Graphics and text labels are organized in a manner to assist selection. Common, family and scientific names are listed alphabetically and grouped by category, such as ground covers, hedges, shrubs, trees, vines, seasonal colors, size and much more.

LandWorks
CAD system for landscape design
Macintosh SE or larger.

LandWorks is a powerful CAD system for landscape design professionals. It is based on the PowerDraw program. The program comes complete with PowerDraw, landscape symbols library, irrigation symbols library and detail library. There is both an on-screen tutorial and hardcopy tutorial that walks users through the program from a landscape point of view. The program has links to both PlantMaster and the Landscape Estimator for full design studio work.

MacHeliodon V3.0.1
Architectural sun shading calculator for building designers
Macintosh Plus or larger; 1.6 MB of RAM.

An indispensable tool designed by architects for architects, MacHeliodon will quickly and easily calculate the exact position of the sun at any time of the day, on any day of the year, anywhere in the world. It will also calculate and graphically show the shading effect of an overhang of a user's specifications. MacHeliodon allows architects and building designers to evaluate many overhang designs in a matter of minutes, with much more accuracy than the standard sun path diagrams most designers rely on. MacHeliodon has more than 50 major North American and European cities already installed in its database, and each purchaser's location is added before shipping. Adding new locations is extremely easy. Three time systems are supported: solar time, standard time and daylight savings time. New features in version 3.0.1 include: displays multiple shadows at two hour intervals; gnomon feature displays shadow cast in plan at one hour intervals; and sun chart displays sun position in the sky at one hour intervals.

MacInteriors
Three-dimensional interior design tool
Macintosh Plus or larger; hard disk drive.

MacInteriors is a three-dimensional interior design/space planning tool for room layouts that allows elevations, plans and perspectives to be viewed and printed. Furniture and other objects can be created using the drawing palette. This includes tools for drawing rectangles, cubes, polygons and prisms. Room outlines are drawn using simple wall drawing tools. Doors and windows may be drawn to a user's specifications. Other features include: full color support, pricing and layering capabilities and a library of more than 100 home and office objects. Users can be view and print in 3-D from any height or angle.

MacPerspective 4.0
Three-dimensional line drawings
Macintosh 512K or larger; hard disk drive.

MacPerspective is a program that allows architects, draftspeople, artists and engineers to construct accurate wire-frame perspective drawings of houses, buildings or other objects from dimensioned drawings. Features include: input dimensions in feet and inches or decimal; zoom in and out; click points to draw lines to them; automatic completion of rectangles; set up a secondary coordinate system; move/duplicate/delete objects in 3-D; cut/copy/paste objects in 3-D for transfer to other MacPerspective drawings; print drawings in any desired size on an ImageWriter or LaserWriter (up to 100 inches); orthographic and axonometric views; draw circular and elliptical arcs in 3-D; draw polygons in 3-D; erase hidden line segments; and write Adobe Illustrator files.

Mum's The Word Plus
Landscape design system
Macintosh Plus or larger; PowerPC.

Mum's the Word Plus is an integrated landscape design system that combines a plant database, object-oriented graphics and an expandable symbol library. Mum's Plus includes information on more than 625 plants. Users may add plants or change plant information. They can select plants based on flower color, season of bloom, height, uses, hardiness zone, soil, exposure, drought tolerance and more. Plant symbols are displayed along with horticultural information. Plants can be dragged from the database to the design or linked to areas in the design. Mum's Plus includes more than 100 landscape symbols, as well as a tool palette, patterns, color, copy and paste, text editing and change of scale. Plant symbols in a design are automatically labeled and a planting list is generated. Symbols are scaled according to height and spread information in the database. Database selection criteria can be used to select plant symbols in the design.

Parametric Geodesic Math Generator
Generates dome data
Macintosh 512KE or larger; System 6.0.2 or later.

Parametric Geodesic Math Generator is a geometry utility that assists in the design of geodesic dome manufacturing (octahedron, icosahedron) by offering the following features: user-friendly operation and no previous dome design experience necessary. Coordinate data and chord factors are generated using parametric techniques. Frequency is limited only by memory.

Planit
Computerized kitchen, bath, bedroom and furniture design program
Macintosh Plus or larger.

Planit is a computerized kitchen, bath, bedroom and furniture design program that produces plans, elevations, perspectives and pricing. Graphics are customized to portray any manufacturer's catalog, exactly matching cabinet designs, framed or frameless door styles and door colors. Standard graphics include three-dimensional mitered moldings, rounded cabinets, bathroom fixtures, bedroom furniture, entertainment centers, lamps, fireplaces, couches, plants, etc. Planit's colors accurately match those of a user's kitchen. Custom cabinetry or other objects can be drawn directly onto the screen, much as if sketching with a pencil. Autodesign, pop-down menus, modal dialog boxes and drawing with the mouse all make Planit easy to learn and use. Planit has more than 200 major manufacturer catalogs entered into the system as data files with correct pricing and graphics. At a press of a button, it will print a detailed price quotation, manufacturer's order, price comparisons, installation instructions, customer's invoice or any user-designed report. Planit will design a kitchen automatically and produce architectural-quality plans and elevations, dimensioned and drawn to the scale of a user's choice. Precise perspective and birdseye rendering can be created from any point of view. Planit also features a "MultiView" window that shows any four views in a single window. As an option, Planit can link directly to the Wood-Write cut list program to produce part lists for the cabinets used in the design.
$5,295 retail

PlantList
Plant material information system
Macintosh Plus or larger; Microsoft Excel 2.2 or later.

PlantList is an easy-to-use plant material information system that simplifies the creation of job specific Planting Schedules and automatically maintains a custom plant material design resource file. PlantList simplifies Planting Schedule generation by automatically filling in the correctly spelled Latin (botanic) plant name when users type in a common name. Schedules may be laser printed for paper copies or sticky-backs. Each time users enter a new plant material listing to a Planting Schedule, it is automatically posted to an Adds List, with the date and name of the job where it was specified. The Adds List, after review and editing, automatically updates a Master Index. The Master Index may be sorted by classification categories of a user's selection, and extensive notes added to each listing. Its value as a design resource information system grows as it is used and personalized.

PlantMaster
Plant information system
Macintosh SE or larger; hard disk drive.

PlantMaster is a plant information system that allows users to look for plants either by characteristics in a cross-referenced search or by plant name. The plants are referenced to color photography in plant books that work with the software. There are eight regionalized versions of the software to serve any area of the United States. The program allows users to create a planting schedule that can be printed in either landscape or portrait mode. The program has maintenance scheduling capability, pricing capability and a large variety of reports, ranging from flower bloom reports to water requirement reports.

Professional Series Drafting Symbols
Architectural drafting symbols in MiniCad, PICT, DXF file formats
Any Macintosh; MiniCad, Blueprint or any drafting application that reads PICT or DXF file formats.

Professional Series Drafting Symbols is a collection of the most commonly used architectural drafting symbols created by architects for architects and drafting professionals. Four modules are available. Module 1, Architectural, includes kitchen appliances, bathroom/toilet fixtures, windows, doors, utility room fixtures, HVAC symbols, electrical/lighting fixtures, site/landscape planning, dining/conference room furniture, living room furniture, bedroom furniture, game room equipment, office/commercial fixtures and presentation symbols; Cabinetwork, including kitchen cabinets, bath cabinets and bookcase cabinetwork; Doors/Windows, including window elevations and door elevations; and Style Sheets, including a sample project, complete with floor plans, elevations, standard details and schedules, pre-set with layers and symbols in place for "quick-start" drawings. Module A includes more than 250 hybrid (3-D) door and window symbols for MiniCad users. Module B includes more than 200 hybrid (3-D) kitchen, bath and library cabinetwork. Module C includes 200 furniture symbols (3-D hybrid) for MiniCad users.

Project Management Task Modules
More than 1,000 administrative tasks for project management
Macintosh Plus or larger; 1 MB of RAM; 20 MB hard disk drive; 800K disk drive; Checklist format (Microsoft Word or WordPerfect).

Project Management Task Modules is a hyperstack checklist of more than 1,000 administrative tasks normally required in managing projects. The program includes client relations, feasibility studies, predesign, EIR and code searches, design development, working drawing production, bidding, shop drawing checking, construction contract administration and postconstruction administration. All HyperCard tasks are coordinated with AIA contract documents and procedures.
$75 retail; Checklist (Microsoft Word or MacWrite)
$10 retail; sample disk in Microsoft Word only (all checklists on one sample disk)

SunDial 3.0
Solar calculator
Macintosh 512K or larger.

SunDial is a solar calculator that displays the position of the sun for any Earth location and any time. This fast, easy-to-use program is ideal for photographers, architects, planners and anyone who needs to know where the sun will appear in the sky at any given time and place. Several graphic display options are provided: Plan View is similar to the familiar static sun charts; Oblique View is a 3-D display that shows the sun in a "celestial sphere" around the local horizon. All views show the sun and the shadow cast by either a sundial gnomon or a movable wall that can be oriented in any direction. The sun's Alt-Az coordinates are given and its RA-Dec coordinates are available on demand.

SuperScape Landscape Management System
Business management system for landscape companies
Macintosh LC or larger; 4 MB of RAM; 40 MB hard disk drive; ImageWriter II; backup system is recommended.

The SuperScape Management System is a complete, integrated business management system for landscape companies. The program manages multiple customers, locations, contracts, sales invoices, accounts receivable, services, scheduling, work orders, estimating, accounts payable, cash management, employee time cards and information, contract analysis: bids vs. actual and team accounting. Invoices are automatically generated when contracts or work orders are input. Unpaid invoices are tracked by Accounts Receivable available with the cash management module, which also manages accounts payable. The estimating system permits quick and easy preparation of bids. From here, estimates can be used to finalize a contract and produce a schedule of work. Work orders are automatically generated from the contract's schedule of services. Contract analysis compares income generated against cost of labor and materials. Labor costs come from time cards and material cost are drawn from vendor invoices and work orders. Contracts can also be analyzed by actual cost compared to costs estimated at time of bidding. Team accounting allows for the financial comparison of different teams or crews.
$895 to $1,895 retail; priced per module

Working Drawing Planning And Management
Checklist for planning and coordinating working drawings
Macintosh Plus or larger; 800K disk drive; 20 MB hard disk drive; Microsoft Word and WordPerfect.

Working Drawing Planning and Management is a complete checklist for planning and coordinating a user's working drawings. All elements are listed by drawing, from sitework through every phase of architectural construction. The checklists are also a project assignment guide for all drafting staff. Once filled in for a project, the checklists direct staff whether the supervisor is in the office or not. The checklists assure that all elements that are supposed to be in the drawings are done, both completely and accurately. The checklists are specification and construction detail coordinators, too. As users check off working drawing components, they automatically create a checklist of items to be specified and a checklist of all details that must be in the drawings. CSI coordination numbers are used throughout.
$75 retail; Checklist (Microsoft Word or MacWrite)
$10 retail; sample disk in Microsoft Word only (all checklists on one sample disk)

Vertical Markets/Banking, Finance

The Banker's Compliance Model
Two-year monthly and five-year annual commercial bank simulation model for bank compliance/planning
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

The Banker's Compliance Model allows bankers to do complete short-term and longer-term financial simulation and forecasting of their bank's financial statements, including Statement of Earnings and Retained Earnings, Balance Sheet, Statement of Changes in Financial Position, Cash Flow Statement, Financial Ratio Analysis and Valuation Analysis of the Bank (i.e., what is it worth from seven or eight different financial perspectives). The chart of accounts in The Banker's Compliance Model are on a detailed basis as follows: commercial loans, commercial loan fees, SBA servicing fees, real estate loans, real estate loan fees, leases, consumer loans, consumer fees, extended checking, investments, due from banks time deposits and FED funds sold, as related to various sources of income; Super NOW, money market savings, Freedom accounts, regular savings, small CDs, IRAs, large CDs and public funds, as related to interest expense items; etc. The banker simply enters basic data and assumptions and the models do the rest, while meeting commonly accepted accounting principles. This system is ready to use and has a minimal learning curve (no formal training is required). Users simply follow the input screen to enter their data and assumptions and The Banker's Compliance Model does the rest, supplying all the logic, equations and formats. The models are easily customizable.
$5,000 suggested retail (special: $2,995); includes full technical support
ILAR Systems, Inc.; 334 Baywood Dr.; Newport Beach, CA 92660; 714-759-8987, 714-640-2985, 800-777-4920, 714-720-1530 (fax) or 714-640-7233 (fax)

Compare-A-Loan
Performs loan amortization, loan comparison and refinancing analysis
Macintosh Plus or larger.

Compare-A-Loan allows users to compare several aspects of up to five different types of loans on a single report. It is designed to assist users in making financial decisions in regard to loan applications. A Refinancing Analysis report helps users determine the best refinancing alternative. Most types of loans may be handled using the following features: fixed or variable interest rates; odd day interest; 360 or 365 day interest; fixed or variable payments; extra principal payments; skipped payments; fixed principal payments; negative amortization; balloons; points and fees; seven payment intervals; and Canadian mortgages. Compare-A-Loan compares annual principal, annual interest, cumulative principal, cumulative interest and principal balance for up to five loans at once. It generates complete or partial customized amortization schedules for any of the loans entered. APR disclosure statements may also be printed. Several reports may be displayed on the screen at the same time. All reports may be sent to word processing and spreadsheet programs for inclusion in other documents.
$79.95 retail
Softflair, Inc.; 2500 W. County Rd. 42; Minneapolis, MN 55337; 800-553-8338 or 612-894-9716 (fax)

Compare-A-Loan Pro
Performs loan amortization, loan analysis, loan comparison and refinancing analysis
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later.

Compare-A-Loan Pro performs loan amortization, loan analysis, loan comparison and refinancing analysis. Most types of loans may be handled using the following features: fixed or variable interest rates; odd day interest; 360 or 365 day interest; fixed or variable payments; extra principal payments; skipped payments; fixed principal payments; negative amortization; balloons; points and fees; seven payment intervals; Canadian mortgages; rule of 78s, US rule and actuarial interest computations; nominal, effective and periodic rates; extra payment series; exporting of reports to text files; and several miscellaneous interest rate options. It generates complete or partial customized amortization schedules and APR disclosure statements. Compare-A-Loan Pro also solves for the unknown loan variable, even with variable payment amounts and/or variable interest rates. All reports may be sent to word processing and spreadsheet programs for inclusion in other projects. Compare-A-Loan Pro also has graphing capabilities and can produce six different graphs.
$129 retail
Softflair, Inc.; 2500 W. County Rd. 42; Minneapolis, MN 55337; 800-553-8338 or 612-894-9716 (fax)

Credit Profiler!
Credit reports
Any Macintosh; modem.

Credit Profiler! pulls credit reports from TRW or CBI/Equifax. While a user enters a subject's information, Credit Profiler! formats it. It then dials the credit bureau, signs on, pulls the credit report and displays it for viewing, printing and/or saving. Credit Profiler! replaces antiquated teletype terminals with the Macintosh interface, while providing additional features, such as plain-English prompting and formatting, the capability to correct inputs, context-sensitive spell checking and the capability to save, review and print reports. Other features include: automatic recovery/resend, multiple inquiry modes for each bureau and direct modem access (for dumb terminal emulation).
$195 retail
QED Technologies; PO Box 216; Merrimack, NH 03054; 603-882-0810

Financial Genius
Calculates present and future value, net present value and internal rate of return
Macintosh Plus or larger.

Financial Genius calculates present and future value, net present value and internal rate of return with mixed or constant cash flows and fixed or variable rates. It performs extensive what-if analysis, as it solves for the unknown variable, including payment amounts for normal and deferred annuities. There are options for both beginning or end of period and positive or negative cash flows. Financial Genius also generates detailed present value, future value, net present value and annuity statements, so a user can verify the calculations or present to a client. It also has extensive loan amortization capabilities. Detailed amortization schedules and APR disclosure statements may be generated. All reports may be customized by a user and sent to the Clipboard to be pasted into other Macintosh programs.
$129 retail

KayElleware — Lending Software (FNMA)
Produces a complete packet of loan forms
Macintosh with 68020 processor or larger; 12-inch color or monochrome monitor recommended; FileMaker Pro 2.0.

KayElleware is a mortgage program designed especially for mortgage loan solicitors or lenders to assist in preparing the necessary mortgage loan forms needed for FNMA underwriting. A lender simply enters all the necessary financial and personal information on an applicant onto the Data Entry screen. Once the data is logged, the interviewer pushes a few on-screen buttons and a complete four-page FNMA 1003 is generated on a LaserWriter or DeskWriter

printer. The production quality is exactly that of the original application form. All the calculations of client income, debits, assets, details of transaction and much more are done automatically as to FNMA specifications. The program will also produce the Verification forms, client Financial Statement, R.E.O. schedule, FNMA 1008 Transmittal, Good Faith Estimate and Reg Z. Besides the FNMA 1003 Application, the Financial Statement, Reg Z, FNMA 1008 Transmittal and R.E.O. schedule will also calculate the necessary debt to income ratios, net worth, assets, liabilities, etc., as per FNMA specifications. The records can also be modified later by a user to generate mailing labels, loan volume reports, etc. With this program, a lender can save hours of taking applications by hand. Any future changes made to the application are automatically updated and ready for reprinting. KayElleware is multiuser on a network and can be used on PowerBooks or Notebooks for portability. It also runs on MS Windows.

Loan-Master
Home loan quotation system
Macintosh Plus or larger, including PowerBook; FileMaker Pro.

Loan-Master is a quick home loan quotation system for the active loan officer. A screen full of empty boxes, which when filled in, perform all kinds of calculations, including printouts and letters to borrowers. Information is immediately transferable to another module for creating 1003s, 1008s, verifications and processor documentation. Users enter information and get instant answers to ratios, payments, taxes, escrow, title fees, savings and costs, with loan parameters being preprogrammed. By pressing an on-screen button, users can generate a professional letter, pre-qualification or refinancing work sheet on company stationery, suitable for mailing. Now loan officers can track thousands of borrowers with multiple quotes, turning some of them into loans. Users can upload to Processor-Master for loan processing, 1003s, verifications and submission to funding tracking. The program can be used in either Macintosh or IBM Windows environments.

LoanMaster 3.0
Mortgage servicing software
Macintosh with 68030 or larger processor; 2 MB of RAM; 20 MB hard disk drive.

LoanMaster is a mortgage loan management and servicing system. It services loans that are fully or partially amortized, as well as interest only. It creates coupons and automatically calculates and displays interest as payment is applied. Late fees are automatically assessed and delinquent payments tracked. The system enables fractionalization of loan or loans among participating investors, prints checks to investors on a user's check stock or will cut laser checks. A service fee may be taken at user's option. Year-end 1098 and 1099 reporting is included. All Borrower and investor data can be exported to word processors, spreadsheets and/or other accounting programs with choice of standard formats. More than 20 standard reports are included. ACI runtime software for 4D is required, and customization is available.
$2,995 retail

Proflex Software Co.; 1186 S. Diamond Bar Blvd., Ste. 516; Diamond Bar, CA 91765; 909-396-9710 or 909-396-7650 (fax)

Mortgage Loans — Is It Time To Refinance?
Determines whether users should refinance mortgage loans
Any Macintosh; Microsoft Excel or ClarisWorks.

Mortgage Loans — Is It Time to Refinance? determines whether users should refinance mortgage loans. It applies to both residential loans for homeowners, as well as business loans secured by commercial or industrial properties. As interest rates fluctuate, opportunities inevitably arise for borrowers to save substantial sums of money by refinancing. The program analyzes the complex question of whether or not it will be profitable to refinance by determining the actual net present value (NPV) benefit or cost of the proposed refinancing.

MortgageShop
Mortgage processing database
Macintosh Plus or larger; 4 MB of RAM; 20 MB or larger hard disk drive; FileMaker Pro.

MortgageShop is a comprehensive mortgage processing database that runs on both industry-standard PCs with Windows and on Apple Macintosh computers. It was designed using FileMaker Pro and is fully compatible with both PC and Macintosh environments. It handles conventional, FHA and VA loans and prints all necessary forms and disclosures. The data entry screens simulate actual forms and allow processors to immediately begin entering information without special training or practice. MortgageShop is fully networkable and was designed using an open architecture that allows the database to be customized to suit a user's needs without special programming knowledge.

Smart Investor Dictionary
Dictionary of financial, investment and real estate terms
Macintosh Plus or larger; System 6.0 or later.

The Smart Investor Dictionary is a multimedia, HyperText, cross-referenced collection of terms used in the world of finance, investment and real estate industries. With more than 2,200 hyper-linked definitions, the Smart Investor Dictionary provides a highly efficient and rapid reference to the lexicon of the world of finance, investment and real estate. Terms are clearly defined and cross-referenced to avoid the syndrome of investment jargon being defined with more investment jargon. All terms and definitions are "Hot-Linked" with buttons to related terms in the dictionary, and can be accessed with the click of a mouse. Searching by text reference allows for sophisticated definition retrieval for the more advanced professional.

Vertical Markets/CAD/CAM

AAC-Float
Hydrostatic flotation of yachts
Macintosh Plus or larger.

AAC-Float is the basic module of the AAC-MAR computer programs that accepts the canoe shape specified by a designer and carries out rapid flotation in flat water, uprighted and heeled, with fixed or free pitch attitude. This program has been formulated to provide a designer with a user-friendly interface, rapid and precise analysis and well-organized, highly informative report summaries. Its Macintosh output is comparable to other IBM-compatible flotation programs. However, AAC-Float includes new submerged aspect ratio canoe parameters and basic information for IACC rating a hull. AAC-Float is available without need to purchase the more expensive AAC Macintosh programs. The simple graphics of AAC-Float 1 permits a rapid check of bulk-head input. The graphics of AAC-Float 2 includes canoe side and top view, floated bulkheads and canoe's cross-sectional area distribution curve.
$150 retail; AAC-Float 1
$250 retail; AAC-Float 2

AAC-MAR
Hull analysis with submerged volumetrics for design synthesis
Macintosh Plus or larger.

AAC-MAR expands the in-depth analysis and advanced design features of AAC-Vision, with special submerged canoe volumetrics (AAC-SUB). This routine analyzes the submerged portion of the uprighted and heeled canoe by subdividing it into three submerged sub-volumes parallel to the water's surface, and provides data to determine the influence of each sub-volume on righting moments (z-y volumetrics with local CBs) and on wave and friction drag (z-x volumetrics with local CB, draft and prismatics). The graphics package of AAC-MAR includes the graphics of AAC-Vision 2, expanded with AAC-SUB's volumetrics. Therefore, AAC-MAR's graphics covers hydrostatics, curves of selected hydrodynamic parameters, volumetrics of three canoe sub-volumes and representations of heavily pitched canoe conditions. In the hands of an experienced designer, AAC-MAR permits a comprehensive and sophisticated design synthesis for new hulls.
$950 retail
Advanced Aeromechanisms Corp.; 7777 Fay Ave., Ste. 219; La Jolla, CA 92037; 619-459-2119 or 619-459-0879 (fax)

AAC-Vision
Flotation and analysis of advanced hulls
Macintosh Plus or larger.

AAC-Vision was originally developed for configuration evaluation of advanced IACC canoes in flat water. Expanding from AAC-Float, it provides an in-depth analysis of hydrostatic and hydrodynamic parameters as a function of heel angles, as needed for preliminary design of advanced hulls, including newly developed aspect ratio canoe terms. Results are available in report form for rapid comparative evaluation, or in considerable detail for sophisticated design work. AAC-Vision can also examine with ease heavily pitched conditions, simulating wave encounters upright and heeled. AAC-Vision 1 has an extensive graphics package that includes floated planviews, side views and bulkheads, each with waterplanes, CB and CG. Cross-sectional area curves include the heeled cases. The graphics of AAC-Vision 2 are expanded to include curves of selected design parameters and coefficients, and can easily generate views corresponding to heavily pitched conditions.

Advanced Drafting Tools 1 And 2
Externals for PowerDraw
Macintosh Classic or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later; PowerDraw 4.0 or later; PowerCADD 1.0 or later.

Advanced Drafting Tools 1 and 2 are a set of Externals for PowerDraw. These Externals contain specialized menu and tool items that add features to PowerDraw. Tools included in Volume 1 are a Trim/Extend tool, Faired Curve Spline tool, Spline Polygon, Projection Line and Insulation tool. Some of the added menu commands are Cut Curve with Line, Convert to Bézier, Divide, Duplicate, Rotate and Mirror by Line. The Insulation tool is a special interactive tool that allows users to draw the standard architectural symbol for insulation. Many of the tools were developed to produce aircraft engineering drawings and exploded isometric assembly illustrations.

In Volume 2, 13 baseline tools emulate the manual drafting machine, only easier, to allow users to work at odd angles. Another set of tools allows users to copy and paste with one click or copy the attributes of one object to another. Twelve specialized Isometric tools allow users to draw various objects in an isometric plane. There is also a Balloon Text tool. Some of the added menu commands are Blend and Join. The LaserPrint External is provided to aid in PostScript printing. This specialized tool provides a multitude of capabilities, such as printing just selected objects or print what is contained in the window, or print a D-size drawing on an 8.5-size sheet.

Arch-T
Architecture
Macintosh II; 40 MB of hard disk space (16 MB of RAM recommended); AutoCAD R10 or R12 with AUI support; mouse or digitizer.

Arch-T focuses AutoCAD on architecture. With its vast symbol library of more than 2,100 plan and elevation blocks, the program frees users from routine, yet time-consuming, drawing chores. Furniture, fixtures, tag symbols, doors, windows and sitework are all comprehensively represented with a variety of high-quality symbols. Powerful routines help users create stairs and parking lots quickly. More than 75 hatch patterns and wall pouches add textures and details that normally demand hours of painstaking work. A flexible user-definable layering scheme and smallest/largest virtual zooms without drawing regeneration. Users can even generate parallel lines or "glue" two lines together.

Architectural Images Library
PowerDraw symbols, including plan and evaluation views of people, vehicles, office and residential furniture and landscape elements.
Macintosh Classic or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later; PowerDraw 5.0 or later; PowerCADD 1.0 or later.

The Architectural Images Library is a compilation of line art symbols for PowerDraw that allows users to add realism to their architectural CAD drawings. Users can customize the images by adding fill patterns and colors or simply use silhouettes. Images include: men, women and children, both at work and play, detailed and silhouettes; front, top and side views of cars and trucks; side and plan views of office and residential furniture; landscape elements in plan and elevation views, including rocks, tree and plant trunks, branches, foliage; and basic landscape symbols. All images have reference snap points and are ready to assemble.

Ashlar Score!
Two-dimensional design and drafting
Macintosh SE/30, II or Quadra family; 4 MB of RAM; hard disk drive; math coprocessor.

Ashlar Score! is a two-dimensional design and drafting package for professional and non-professional package and container designers. It includes unique technology called the drafting assistant (patented). The drafting assistant automatically locates endpoints, midpoints, tangencies, center points, intersections and any other logical geometric constraint. This capability makes precision drafting as simple as free-hand sketching, yet accurate to 16 decimal places. Ashlar Score! also includes integrated parametrics to create "dimension driven drawings," letting users sketch without thinking about exact dimensions until they are ready to dimension and reshape the drawing. Ashlar Score! comes with features normally only available on more expensive CAD packages: associative detail view, associative dimensions, separate Y-Axis scaling, assembly instruction generation, automatic/manual bridging, linear and polar array duplication and more. DDES II, DXF, IGES, EPS, PICT and HPGL translators are built in. Built-in drivers for sample cutters, lasers, HP, HI and CalComp plotters are also provided.

Aura Mill 4.0 (Super CAM)
Three-axis milling package
Macintosh with 68030 or larger processor (68040 recommended); Math processor; 5 MB of RAM.

AuraMill is a simplified three-axis milling package without surfaces, but it is capable of cutting complex 3-D shapes from either a 2-D AuraCAD drawing or a DXF file, which may be 2-D or 3-D. Because it is able to make a 3-D part out of a simple blueprint-style 2-D drawing, it is fundamentally easier to use than other 3-D mill CAM software. It is exponentially more powerful than its predecessor, AuraMill version 3, and features a built-in true 3-D user interface that gives a tiltable, rotatable wire frame image of the design to be machined and full 3-D simulation of the cut. Islands inside the shape may be at any Z value above the main contour or at several levels, even outside the main perimeter. Extensive information on the process is available through pop-up information blocks and Balloon Help guides users through any process. An expanded table of materials is included for automatic computation of speeds and feed. Through Aura's Power Post, Super CAM will output accurate and edit-free code to any machine tool that uses G-code through the machine tool's RS-232 port.

AuraCAD V3.4
Two-dimensional mechanical CAD program
Macintosh SE or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; math coprocessor and large, color monitor recommended; System 6.0 or later.

AuraCAD is a powerful and easy-to-use two-dimensional mechanical CAD program. It is primarily intended for mechanical design work, exporting files to Aura's various CNC Machining Modules (CAM), but is also at home in electrical and architectural design. (There are additional symbols libraries available for each of these uses.) AuraCAD contains complete drawing tools for manipulation of points, lines, splines, arcs, fillets, circles and ellipses. It is capable of 16 digit floating point accuracy in X/Y, grid or polar coordinate systems and provides a variety of view and zoom functions. It supports multiple layering, symbols, dimensioning, text in drawing and offers complete macro capabilities for repetitive design work. Embedded printer and plotter drivers provide professional-quality output to most popular dot matrix and laser printers and plotters. It supports scanners and digitizing tablets for accurate input of templates and blueprints. AuraCAD ships with two versions: math coprocessor and non-math coprocessor and includes IGES and DXF conversion module. Both versions support black and white or color capability. AuraCAD is a part of the AuraCAS system for computer-aided set-up of CNC milling machines, which is available as a stand-alone fixture design system or a complete CAD/CAS/CAM system. All of Aura CAD/CAM's CAM modules for milling, turning and wire EDM applications include a fully operating copy of AuraCAD. The stand-alone AuraCAD package also includes two Video Assist training cassettes to tutor new users.

AuraCAS
Jig and fixture design package
Macintosh SE or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; math coprocessor and large, color monitor recommended; System 6.0 or later.

AuraCAS is a stand-alone jig and fixture design package for computer-aided setup of CNC milling machines. The patent pending AuraCAS system changes the age-old method of machine setup from a time-consuming process of designing, mounting, alignment and referencing of fixtures into a quick, accurate and organized system of fixture design that reduces milling machine setup time an average of 75 percent. AuraCAS is also sold bundled with AuraMill as the AuraCAS Station, providing complete 2 1/2 axis CAD/CAS/CAM capability. AuraCAS combines an extensive library of tooling components, Power Fixtures, with AuraCAD for professional design capabilities and AuraIGES/DXF to provide complete import/export capabilities. Part designs may be created from scratch in AuraCAD or imported from such programs as AutoCAD to be completed for machine tool setup. Fixture and part designs produced with AuraCAS may be exported to almost any CAM software, including The Gibbs System, and DOS-based packages, such as SmartCAM and MasterCAM. The package also contains software manuals and two Video Assist training cassettes to tutor users in all aspects of computer-aided setup.

AuraMill 3.2
2 1/2 axis milling package
Macintosh SE or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; math coprocessor and large, color monitor recommended; System 6.0 or later.

AuraMill is a complete 2 1/2 axis milling package that offers powerful CNC programming tools for almost any milling job. AuraMill is offered as part of the AuraCAS Station, a complete, professional and fully-integrated CAD/CAS/CAM system that is fast, powerful and easy to use. AuraMill's programming capabilities include a standard FANUC output for contour milling, pocket milling, drilling, boring and tapping processes. AuraMill also features pull-down menus, easy selection of geometry by mouse, a built-in NC file editor, automatic computation of speeds and feeds, user-definable libraries for end mills, fly cutters, drills, taps and more. AuraMill can set up to 10 different communications parameters and send and receive files from the machine control. Post processors for standard controls are included. Four Video Assist training cassettes tutor new users in all aspects of CAD, CAS and CAM. Power Post, a new post processing system, ensures edit-free NC files. Power Post also offers the ability to create and customize post processors for almost any control that uses C-language.

AuraWire 3.5
2 and 4 axis wire EDM package
Macintosh SE or larger (Macintosh II recommended); 2 MB of RAM (4 MB recommended); hard disk drive; math coprocessor and large, color monitor recommended; System 6.0 or later.

AuraWire is a complete 2 and 4 axis wire EDM package that offers powerful CNC programming tools for almost any wire EDM machine tool. AuraWire is offered as a part of a complete, professional and fully-integrated CAD/CAS/CAM system. It comes complete with AuraCAD 3.4, AuraIGES/DXF and AuraCAS. AuraWire's programming capabilities include a standard FANUC output for regular 2 axis cutting, taper cutting, 4 axis cutting and coreless processes. AuraWire also features pull-down menus, easy selection of geometry by mouse, a built-in NC file editor, automatic computation of speeds and feeds, user-definable synch points for 4-axis work and more. AuraWire can set up to 10 different communications parameters and send and receive files from the machine control. Power Post processors for most standard controls are included. Four Video Assist training cassettes tutor new users on CAD, CAS and CAM.

AutoCAD Release 12
Universal design and drafting program with three-dimensional modeling and surfacing
Macintosh II; 4 MB of RAM.

AutoCAD is a universal design and drafting program for desktop computers and workstations. Its open architecture, embedded high-level programming language and provision for writing customized drivers for input/output devices make it uniquely flexible and versatile as a graphics standard for nearly every discipline. AutoCAD equips design professionals with a host of features, including full three-dimensional design capability. Other features include: a user-defined coordinate system that allows users to specify a construction plane in three-dimensional space; Coordinate System Icon that provides visual confirmation of the current working construction plane; Plan Command that allows the specification of the current UCS (User Coordinate System) as a plan view; a dynamic viewpoint option that allows users to rotate objects in three-dimensional space on screen (interactively and in real time); allows interactive zooming on

selected objects in real time; allows interactive panning of selected objects in real time; allows users to cut sections through three-dimensional models instructively; perspective projections can be generated at any time; users can perform hidden line removal on a selection set; and a viewpoint capability that allows up to four different views of a drawing on screen at one time.

B^2 Logic 2.2, B^2 Spice 1.1 And B^2 Logic 3.0
Circuit design and simulation tools
Macintosh Plus or larger; 1 MB of RAM and System 4.2 or later for Logic 2.2; 2 MB of RAM and System 6.0 or later for Spice or Logic 3.0 (2.5 MB of RAM for System 7.0 or later).

B^2 Logic and B^2 Spice are affordable, user-friendly circuit design and simulation tools. B^2 Logic provides more than 100 components for digital circuit designs. A user views simulation results by probing signals in the schematic and in a timing diagram. B^2 Spice provides most Spice components and supports Transient, AC and DC analyses. Simulation results may be graphed or tabulated. B^2 Logic 3.0 boasts EDIF File Format Output, more than 50 new devices, enhanced PLD Simulation capabilities and much more.

Blueprint 5
Two-dimensional CAD package
Macintosh Plus or larger; 2 MB of RAM.

Blueprint is a full-featured, two-dimensional drafting system. It allows users to snap to precise points. Features include dotted and dashed sectioning lines, tolerancing, chamfering, "smart" walls with trim and auto-join, cavity walls and a "cut" tool for easily putting windows and doors into walls. Other enhancements include the polyline tool that combines beziers, lines and even arcs into one closed surface, automatically fitting a curve through a series of points, and balloon help. Standard features include a built-in DXF translator, advanced auto-dimensioning, including ordinate, baseline, radial and diametrical dimensioning, a full kit of graphical drawing tools, double lines, editable fill patterns, multiple keyboard, palette and menu options for drafting, array duplication and multiple layers. Other features include classes, symbol creation and hierarchical symbol storage, color, fillets, splines, mirroring, text and object rotation by degree, minute and second and EPS. The program comes with a detailed tutorial. Blueprint ships with a Power Macintosh and a 68-K Macintosh version in each box.

CADMover 4.0
Vector graphics translator
Macintosh Plus or larger.

CADMover enables users to get their 2-D and 3-D graphics where they need to be: across departments, computer platforms or programs. Users can synergy via 3DGF, Adobe Illustrator, Architron II, CGM, ClarisCAD, DDES2/IT8.6, Dimensions, Dreams, DXF (both text and binary), ENVISAGE 3D, Gerber Plotter, HPGL, Focus, Zoom, IGES, MacDraft, MacDraw II, MiniCAD+ Text, PICT, Presenter Professional, Sculpt 3D, STL (stereolithography), Super 3D Text and Wavefront (.OBJ). CADMover's precision transformation logic maintans a high degree of accuracy for all calculations. Translation options include multiple layers and levels, multiple drawings within a file, scaling between most formats, unlimited file size with use of hard disk and full color. CADMover 4.0 has pan and zoom for accuracy checks, new editing dialogs and six new EPSF readers.

CSS Customizable Screen Symbol Library
More than 600 AutoCAD symbols
Macintosh II family.

CSS Customizable Screen Symbol Library comes complete with more than 1,000 symbols. It provides increased productivity by allowing customization of screen menus to suit a user's needs. Customizable also means that individual symbols are modified, functions are changeable and new symbols are created based on previously-created patterns. Ease of use is facilitated by employing sub-menus under a main topic heading. The Digitizer Overlay features an 11 by 11-inch active working surface, the 1,000 plus symbols from the Screen Symbol Library, dynamic insertion of many standard shapes and user-program shapes, easy overlay and screen selection of Setvar variables, including 3-D, full ASCII text set and 3-D drafting and polyline features.

DesignCAD 2D/3D
Two- and three-dimensional geometric design and drafting
Macintosh Plus or larger; 2 MB of RAM; 800K disk drive; hard disk drive and math coprocessor recommended; System 6.0.5 or later.

DesignCAD is a computer-aided design and drafting package that provides complete two- and three-dimensional design power for engineering and architecture. It provides the speed and accuracy necessary to manipulate complex two- and three-dimensional designs in real time, and provides "Point Orientation," which allows greater design freedom and control over a user's designs. Features include: full automatic and associative dimensioning; 256 design layers tied to associative geometric editing; complete symbol libraries include 500 pre-drawn Architectural, Cabinet, Electronics, Electrical and piping with automatic scaling export features; floating-point precision with math coprocessor support; mirror; element grouping; support for rectangular and polar coordinate systems; unlimited zoom; multiple extrusions; bi-cubic surface geometry; fillets and chamfers; color text options; unlimited scaling options; geometric primitive options; related and/or auto update viewing with up to five independent view options; user-controlled precision levels; and more. DesignCAD can communicate with all Macintosh-compatible plotter drivers and includes a two-way PICT and PICT2 file translator, and the capability to import and export IGES, DXF, HP-GL, XY or XYZ coordinates. It is MacRenderMan and Showplace compatible.

Desktop Architect; 27 E. Russell St., Ste. 101; Columbus, OH 43215; 614-469-9906

Desktop Packaging Plus
Structural design program for packaging
Macintosh with FPU; 4 MB of RAM.

Desktop Packaging Plus (DPP) is a fully functional, double-floating point precision two-dimensional CAD program that brings a user's packaging concepts from idea to comp to mechanical to final tooling. Tear-off menus and built-in interactive help provide quick start up. The program outputs to plotters, automated sample makers, phototypesetters, laser diemakers or PostScript printers. DPP has a built-in library of pre-drawn styles of packaging and packaging components, all of which are easily modified to meet a user's custom requirements. DPP supports bi-directional translation capability with the following file formats: DXP, EPS, IGES, PICT, PICT2, DDES2 (international file format for the packaging and laser die-making industry), Adobe Illustrator and Aldus FreeHand. It can also export package designs to Swivel 3D and Super 3D to see renderings of a design.

DW-2000
Integrated circuit, hybrid and printed circuit design
Macintosh II family; SunSparc Station; HP 9000 (Series 700); Windows NT; 4 MB of RAM; hard disk drive.

DW-2000 is a highly ergonomic design tool for the realization of custom VLSI circuits and hybrids in a wide range of technologies. Its features include those of mainframe systems, as well as interactive, two-point arc digitizing modes; add/sub poly commands; and fence cut/copy/delete commands. The online Design Rule Check (DRC) command allows interactive and incremental verification of structures according to user-defined technologies. The program offers full GDSII stream compatibility, MEBES input/output, JEOL-01 and JEOL-51 output, Gerber input/output and Cambridge EBMF output. Graphics Programming Environment (GPE) is included.

DynaPerspective 2.33
Three-dimensional modeling and design presentation
Any color-capable Macintosh with FPU; 2 to 8 MB of RAM; hard disk drive; high-resolution color or gray-scale monitor; 8-bit video card.

DynaPerspective is a three-dimensional modeling and design presentation program that can stand alone or enhance other CAD systems with its three-dimensional innovations and unique features. Highly flexible geometric primitives allow rapid creation of designs, assigning such attributes as color, transparency, line type, border display, etc., which can be edited at any stage of the construction. A user can instantly change the color and perspective of the rendered object(s) without recalculation. Library parts, included with the program, can be used and further edited and customized. Users can create their own parts library as well. Automatic or step-by-step walk-through presentations are easily created. DXF, RIB, PICT, PICS and QuickTime formats are supported. A 40-minute demonstration/training video is included.

EASIMAP V4.6
Three-dimensional symbol library of manufacturers' computing equipment
Macintosh II; 4 MB of RAM.

EASIMAP (Equipment And Systems Installation Management And Planning) is a multilayered (service area, door swing, cable holes, etc.), multicolored, three-dimensional symbol library of manufacturers' computing equipment. Available are: Amdahl, Bull/Honeywell, CDC, Dataswitch, DEC, HP, IBM, Memorex, Misc, NAS, Prime, STK, Unisys, Wang and Xerox. Others are available upon request. The EASIMAP libraries contain thousands of manufacturers' equipment symbols and environmental information. Using the pull-down menu selection system, it replaces the old plastic template method of designing a

These Products Available Through Bottom Line Distribution
1-800-347-1923

computer facility. The EASIMAP database provides a user with various customized reports on each piece of equipment: weights, BTUs to air and water, KVA 60 Hz and 400 Hz, plug, connector and receptacle type, sorted serial number, unit address, PDU and CB locations, leasing and maintenance information.

Envision
Computer-aided design rendering
Macintosh II, Centris or Quadra family.

Envision provides computer-aided design rendering for industrial design, automotive, aerospace and engineering applications, as well as interior design. It applies three-dimensional surface details to existing two-dimensional images and can import files from other CAD, image processing or paint programs through various file formats or import scanned images. With knowledge-based modeling technology specializing in soft surface modeling, Envision models and renders any image and applies surface details, textures or finishes on any background image with contours, perspectives, highlights and shading of a photographic image. It replaces having to build complex and tedious wireframe models. Envision provides lighting subsystems, highly advanced texture mapping and high-resolution real-time rendering.

EPSI
PostScript interpreter software
Macintosh Plus or larger.

EPSI is a software driver that takes Encapsulated PostScript, HPGL or DXF files and converts them for processing via various pen plotters or vinyl cutters. Images can be resized, repositioned or sent as multiple copies. If the desired image size is larger than the output device, EPSI automatically segments the image into panels. Output can be made by individual panel section. EPSI is compatible with equipment manufactured by Aristo, Roland, IOLINE, Zeta, Vytek, Gerber, Hewlett-Packard, Zuend, Leica and others.

Explode! 2.0
Illustration package for technical illustration users
Macintosh Plus or larger; System 7.0 or later.

Explode is a software illustration package for technical illustration users. The program has been specifically tailored for the production of isometric and exploded view illustrations used in the Technical Publications industry. It includes many unique and powerful features unavailable in any other illustration or CAD package, including: locking isometric tools, specialized isometric design tools, Advanced Parametric Parts & Objects, Global Line Control and Airo Design & Manufacturing's unique Numbered Callouts tool.
$495 retail
Airo Design & Manufacturing; PO Box 427; Port Washington, WI 53074; 414-284-7169

EZ-EPS
CNC engraving software
Macintosh Plus or larger.

EZ-EPS converts lettering, logos and art work saved as PostScript (EPS) files into geometry consisting of lines and arcs. EZ-EPS can also be used as a stand-alone program to create geometry for letters in TrueType fonts installed in Macintosh System 7.0. Features provided include wrapping text to arc, rotation, scaling or stretching of text and text justification. Geometry created as explained above can be saved as DXF for CAD/CAM systems or HPGL for directly sending to Sign/Film cutting equipment, such as Cutting Pro for Graphtec, Roland, etc. EZ-EPS is a seamless connection between a CAD/CAM system and art programs, such as Adobe Illustrator, Aldus FreeHand, Canvas, LetraStudio, Arts & Letters Graphics Editor, etc. This unique system will convert EPS files into continuous lines and arcs within the tolerances users specify.

The Gibbs System
Computer-aided design and manufacturing
Macintosh Plus or larger; hard disk drive.

The Gibbs System is a comprehensive CAD/CAM package that includes all the programs necessary to take a user from the initial design through the actual generation and downloading of a numerical control program for controlling NC/CNC machines. The Gibbs System incorporates a fully interactive, graphic three-dimensional CAD system that defines part shape and geometry with a full three-axis, graphic CAM system that defines tooling operations. Contour cutting, pocketing, pocketing with bosses, drilling and autocycles are included. Post processors are available for a variety of machine/control combinations. CNC devices supported include milling, turning, four-axis wire EDM, plasma and laser. Because of the versatile Macintosh platform, the system easily integrates with many other types of computer environments, including DOS, Unix, VMS and mainframe computers. The Gibbs System has three-axis capabilities, including the definition and machining of complex surfaces. It also includes the importation and machining of complex sculpted surfaces.

GWN-DTM (Mac)
Civil engineering application
Macintosh II family; 4 MB of RAM (8 MB recommended).

GWN-DTM is a series of integrated software modules that provide powerful interactive mapping and design capabilities for the engineering, surveying and mapping disciplines. Its open architecture allows users to manipulate input and output data in ASCII. The base module provides the facilities to manipulate a theoretically unlimited number of spatial data points and generate and edit complex triangulated terrain models for contour generation, profile and cross sectioning. Additional features include: template design (road design); surface-to-surface/cross-section volume calculation; slope area and drainage area analysis; pad projection to surface/elevation; automated profiling and cross-sectioning with fully user-definable parameters; manipulation/creation of design profiles; cross-sections and profiles display in 2D or 3D; interactive horizontal and vertical curve design; and volumetrics using grid or contour data. All existing features in MicroStation 4.0, including graphic display and plotting output are provided.

HyperSpace
Three-dimensional modeling
Macintosh Classic or larger; 3D digitizer.

HyperSpace is a fast and easy-to-use stylus-based digitizing hardware/software package for creating computer models of complex three-dimensional objects. HyperSpace is useful in a wide variety of applications, such as 3D rendering, animations, CAD/CAM, architecture, research, engineering and graphic design. The software contains built-in translators for exporting HyperSpace 3D files into DXF, Wavefront, Symbolics, Super 3D, Swivel 3D, Vertigo and HyperSpace-ASCII formats. Additional translators are also available.

KAST
Ketiv/AutoCAD standard template
Macintosh II; 1 MB of hard disk space; AutoCAD R10 with AUI support; mouse or digitizer.

KAST, the Ketiv/AutoCAD Standard Template, brings together hundreds of useful and time-saving routines in one user-friendly productivity package. It has two flexible text editors, creates parallel lines with automatic cleanup, lets users define their own layering scheme, allows virtual zooms without time-wasting drawing regeneration, cleans up X, T and Y parallel line intersections automatically and lets users move or copy entities from one layer to another. Included in the package, among hundreds of other utilities, is an interactive RPN calculator so users can pick radii and the lengths of arcs, circles and lines, and see it realized on screen.

LandCADD Complete
Computer-aided drafting and design tool for land planning and design professionals, providing comprehensive land planning, civil and GIS solutions for the environment
Macintosh SE/30, LC III, II, Quadra or Centris 650; math coprocessor; monitor that supports 640 by 480 pixel resolution; AutoCAD Release 12; System 7.1 or later.

LandCADD Release 12 for the Macintosh includes all key LandCADD Release 12 features, allowing designers to customize their databases and implement new graphic options in their designs. Release 12 is seamlessly integrated with AutoCAD Release 12 for the Macintosh. Complete estimating capabilities are included within every module of Release 12 for the Macintosh, allowing users to stay within budget guidelines by using the SQL links to access cost data directly from AutoCAD. This Macintosh release also provides true links to any plant database with a format supported by AutoCAD SQL extensions, including dBase3, Oracle and FileMaker. The Plant Specifier module allows users to access any plant database, including the one that is provided by LandCADD with more than 1,000 plants. Within the Macintosh Site Planning and Landscape Design module, users can label plants without leader lines, label groups of plants or specify mixes within the planting area, even without locating each plant. A tree harvesting routine complements one of Release 12's most popular features, the "grove" command, which allows a grove of trees to be created with one command. As one of the only digital terrain modeling (DTM) packages for the Macintosh, LandCADD's Quadrangle module allows users to edit the TIN and recalculate the contours and/or the grid. A digital terrain model can be generated directly from points, polylines and 10 different formats of point files, and multiple point viewsheds with times seen maps providing improved environmental studies. The cross-sectioning tools allow for vertical and horizontal labeling of sections, specification of slopes adjacent to pads and roads, TIN editing capabilities and numerous grid creation options.

MacConcept 3.7
Three-dimensional visualization and conceptual design program
Any Macintosh; 4 MB of RAM; math coprocessor recommended.

MacConcept provides multidimensional spatial design features, including real-time dynamic rotation and perspective; multiple design levels; numerical line selection; animation; floating point accuracy; and direct data output to Claris CAD (2D design), PICT, DXF, PostScript (EPSF), Adobe Illustrator, Aldus FreeHand or text files. Bidirectional translation of IGES, DXF, 3DGF and other file formats via CADMover with dedicated translators available for FORD and GM data formats.
$1,495 retail; basic program (volume and special discounts and site licenses are available)
$39 retail; fully functional shareware version (requires any Macintosh and 1 MB of RAM)

MacDraft 4.0
Computer-aided design
Macintosh Plus or larger; 1.5 MB of RAM (2 MB recommended); hard disk drive; System 6.0.5 or later.

MacDraft provides a full-scaled, multilayered drafting environment with a complete set of easy-to-use drawing tools, including linear, radial and angular dimensions, with tolerances and Standards. There are special tools to extend and trim lines, create perpendicular, tangent and parallel lines, fillets, chamfers, concentric circles and arcs. Objects can be merged together or subtracted from each other, mirrored and automatically duplicated in a linear or circular array. For increased precision, MacDraft provides keyboard editing and placement of objects. MacDraft's integrated database lets users assign information to objects, perform Find/Replace operations and create custom reports that will update when the drawing is changed. MacDraft automatically creates reports in Microsoft Excel that can be linked to a user's MacDraft drawing.

Machinery Designer's Library 1 And 2
Symbols libraries
Macintosh Classic or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later; PowerDraw 4.0 or later; PowerCADD 1.0 or later.

Machinery Designer's Library 1 and 2 are professionally-designed symbols libraries for PowerDraw. Library 1 contains more than 1,500 ANSI screws and fasteners. This is a comprehensive library containing bolts (hex head), cap and set screws (button/flat head hex/TORX, socket head/TORX, hex socket shoulder, hex socket set), machine screws, nuts, washers and combinations, screw ends and threaded holes. Each symbol is available in many views and sizes.

Library 2 contains more than 1,200 bearing symbols. Nominal dimensions are given in commercial or ANSI standards. This is a comprehensive library containing precision miniature bearings, dowel pins, drill bushings, o-ring/grooves, retaining rings and taper pin holes/taper pin heads. Each symbol is available in many views and sizes.

MacMechanic Vol. 1
CAD library of mechanical machinery components
Macintosh II; 5 MB of RAM; hard disk drive; MiniCad+, Blueprint, Claris CAD, MacDraw II or MacDraw Pro (specify).

MacMechanic is an advanced CAD library of mechanical machinery components designed to assist mechanical engineers, machine designers, graphic artists and illustrators wanting easy access to hard-to-draw, but common mechanical components. Major features include composite drawings of diametral pitch spur gears from 10 to 90 teeth. By resizing the drawings, virtually any other diametral pitch size can be easily and accurately constructed. Additional gear sets can be made by duplicating a Primitive element consisting of one tooth profile. The unique Primitive concept is extended to include timing gears and belts and roller chains and sprockets. Another feature is a large collection of fully-indexed library elements, including accurately drawn two-dimensional views of ball bearings, retaining rings, machine screw threads and heads, shoulder screws, etc. MacMechanic contains more than 600 element views. All components are individually drawn in two views. Individual pieces of components can be accessed to determine size information.

MacSpeakerz 3.0
Loudspeaker design software
Macintosh Plus or larger; 1 MB of RAM.

MacSpeakerz makes it easier than ever to design high performance loudspeakers for any application. MacSpeakerz can analyze six different box types, as well as Isobarik variations on each of these. Specifically, MacSpeakerz can now analyze 3rd Order Closed and 4th, 5th and 6th Order Bandpass Box types in addition to the 2nd Order Closed and 4th Order Vented Speakers covered by earlier versions of the program. The new version has been enhanced to suggest enclosure volumes and tunings for each box type. For existing closed box systems, MacSpeakerz can show users how they can extend the bass response by simply adding the correct value series capacitor to convert the system to a 3rd Order closed box. A Bandpass Box Calculator has been added in addition to the Rectangular and Trapezoidal Box Calculators. The box calculators have been modified to add locks to each of the box dimension fields, allowing users to lock in some dimensions while allowing others to float. The accompanying user's manual has been revised for v3.0 and includes a step-by-step Tutorial for those new to speaker design. The manual also includes chapters on Crossover Design, Driver Parameter Measurement and more.

MacSurf
Three-dimensional surface modeler
Macintosh Plus or larger, including PowerPC; plotter.

MacSurf is a three-dimensional surface modeling system for use in the fields of industrial, aircraft, automotive or marine design. Fifty surfaces allow a designer to create a wide range of shapes with great accuracy. With the built-in hydrostatic calculations, new designs may be analyzed. MacHydro is a free to heel and trim hydrostatics and damaged stability program, including strength calculations, designed specifically for MacSurf. Design files are analyzed directly, alleviating the need for time-consuming digitizing of drawings, or hand typing of offsets. FullPlot is a plotter utility that directs precise output of MacSurf designs to Apple printers and to a range of industry standard plotters, allowing full-size lofting of MacSurf designs. MacRate is an IOR and Twelve-Meter rating calculation program that allows a user to generate a rating certificate that may be viewed and then edited on screen. Prefit provides an alternative means of input by way of keyboard entry of existing offset data. The data is typed in from an offset table and formatted on screen. HydroLink is an offset file link to third party software, including a variety of hydrostatics CFD and FEM programs. MultiMesh is a surface paneller for preparation of input to FEM or CFD codes. Digit provides for digitized input to MacSurf. MacACC calculates IACC ratings. SPAN is a sailing performance prediction program with an integrated LPP.

MicroStation Mac 5.0
Interactive CAD software
Macintosh 68020, 68030 or 68040 processor with FPU; Power Macintosh under Emulation; 16 MB of RAM recommended; System 7.0 or later.

MicroStation Mac is two- and three-dimensional CAD software that offers a complete stand-alone or networked interactive CAD system for the generation, manipulation and output of graphics data. It offers all the advantages of an open system by supporting industry standards for networking, relational databases and file formats. It provides the same functionality as MicroStation on other platforms, including the easy-to-use graphical interface. More than 500 viewing, drawing and manipulation functions are supported, including powerful surfacing commands (NURBs), built-in photorealistic rendering, online documentation, associative dimensioning, dimension-driven elements and much more.

Intergraph Corp.; Huntsville, AL 35894-0001; 800-345-4856 or 205-730-9491 (fax)

MicroStation Review Mac 5.0
Project review power from the desktop
Macintosh 68020, 68030 or 68040 processor with FPU; Power Macintosh under Emulation; 16 MB of RAM recommended; System 7.0 or later.

MicroStation Review gives managers, drawing checkers and others access to CAD drawings at a lower cost than a MicroStation license. MicroStation Review has a simple user interface, making it easy to learn and use. MicroStation Review users can: view two- and three-dimensional design files and attached reference files, including Raster data; view DWG, DXF, IGES, CGM and VersaCAD files; redline designs, including adding notes, symbol placement and specifying areas for change; review non-graphic database attributes; run MDL applications; photorealistic rendering (all of MicroStation's viewing functionality is supported); and plot to all MicroStation-supported devices, from dot matrix printers to electrostatic plotters.

MiniCad 5
Two- and three-dimensional CAD program with intelligent interface, relational database, programming language and DXF translator; includes three free modules: architectural, mechanical and advanced design
Macintosh Plus or larger; 2 MB of RAM.

MiniCad is a high-end, professional-level computer-aided design and analysis program that includes two- and three-dimensions in the same window. A database/spreadsheet, also included in the same window, allows a user to track and automatically calculate the cost of supplies and scheduling, perform flow analysis, analyze power needs and more. A programming language allows users to write their own routines and to create a custom program to suit individual preferences. Two-dimensional features include tolerancing, "smart" walls, cavity walls, a "cut" tool to automatically insert doors and windows into walls, dotted and dashed sectioning lines and chamfering. Three-dimensional features include three-dimensional walk-through and flyover tools, the ability to display objects in multiple views simultaneously, cavalier and cabinet projections and automatic section generation. In addition to a high-accuracy coordinate system, balloon help, auto-dimensioning, auto-join, trim, filleting, layering, completely accurate zoom, multiple line types and arrowheads, and rotation by degrees, minutes and seconds, the MiniCad 2D includes complex duplication with arrays, cubic and Bezier splines, new symbol editing capabilities, the ability to move objects by precise intervals and object-by-object color. MiniCad offers a unified drawing database. In the same document, users can print or plot a drawing of a city block at 1-inch = 50-feet, a floor plan of a city within that city block at 1/8-inch = 1-foot, a tenant floor plan within that building at 1/4-inch = 1-foot and a plan detail of a piece of cabinetry at 1/2-inch = 1-foot. A DXF translator and Claris CAD to MiniCad translator are included. Customizable menus and palettes and Renderman support is included. A Developer's Kit is available.

Ovation CAD/CAM 7.0
Two-dimensional CAD package for package design; allows for designing by parametric design or free-form line by line; imports and exports EPSF, DXF and DDES2 design files
Macintosh Plus or larger; 8 MB of RAM.
Ovation CAD/CAM is an interactive, two-dimensional CAD package originally designed for the converting (packaging) industry. The system includes automatic container designing, advanced geometry features, line styles, rotation, duplication, automatic arc blending and tangent circle generation. Ovation can output to a variety of printing, plotting, routing and laser cutting machines. The system will support a number of plotters ranging from standard (Hewlett-Packard) to high-resolution (+/- 0.0004-inches) large plotters (up to 66 by 100 inches). Its software can also be interfaced to a full range of NC/CNC controllers. Ovation fully supports outputting its design to graphic programs, such as PageMaker, Adobe Illustrator and Ready,Set,Go!. Ovation also imports Adobe Illustrator and Aldus FreeHand EPS files that can then be output to the plotter/sample cutters for paper or vinyl cutting.
$12,500 retail; software only (single workstation)
$7,000 to $100,000 retail; high-speed plotter/sample cutters

Ovation Convert 7.0
CAD/CAM utility
Macintosh Plus or larger; 8 MB of RAM.
Ovation Convert is a software package designed to import and export a variety of different file formats from different CAD/CAM software systems. It then converts those design files into different graphic file formats, such as PICT and EPSF for output to Macintosh-based graphic designing programs. The program can also import DXF, DDES2 and EPSF files and convert them into CAD design files that can be plotted and/or cut on a variety of different plotters and plotter/sample cutter machines.

Parametric Complex Curve Generator
Generates two- and three-dimensional curve data
Macintosh 512KE or larger; System 6.0.2 or later.
Parametric Complex Curve Generator is a geometry utility that automates the design of complex curves (epicycloid, hypocycloid, nephroid, cardioid, astroid, deltoid, spirals, Lizajous) by offering the following features: user-friendly operation, no previous geometry experience necessary, user-designed formats of saved data points, graphic display of curve data, variable display scale and curve parameters saved to the Clipboard. X/Y coordinates are generated using parametric techniques producing the smoothest possible curve, maximum area under the curve and data independent of axis restraints. It interfaces to all CAD programs.
$69 retail
Critical Path Design Sciences; PO Box 43; Oceanside, CA 92049; 619-439-4564

Parametric Conic Section Generator
Generates conic section data
Macintosh 512KE or larger; System 6.0.2 or later.
Parametric Conic Section Generator is a geometry utility that automates the design of conic sections (circle, ellipse, parabola, hyperbola) by offering the following features: user friendly operation, no previous geometry experience necessary, user-designed formats of saved data points, graphic display of curve data, variable display scale and curve parameters saved to the Clipboard. X/Y coordinates are generated using parametric techniques, producing the smoothest possible curve, maximum area under the curve and data independent of cone axis. It interfaces to all CAD programs.
$69 retail
Critical Path Design Sciences; PO Box 43; Oceanside, CA 92049; 619-439-4564

Parametric Involute Gear Generator
Generates gear data
Macintosh 512KE or larger; System 6.0.2 or later.
Parametric Involute Gear Generator is a geometry utility that automates the design of involute gear manufacturing (tooth profiling, rack and pinion, spur, internal, external, helical, tooth stress) by offering the following features: user-friendly operation, no previous gear design experience necessary and parameters are saved to the Clipboard. Coordinate data are generated using parametric techniques, producing the smoothest possible profile. It interfaces to all CAD programs.
$225 retail
Critical Path Design Sciences; PO Box 43; Oceanside, CA 92049; 619-439-4564

PlotMaker
CAD layout and plotting program
Macintosh Plus or larger; native on PowerPC.
PlotMaker is a program for arranging and plotting CAD files from almost any source in one final layout. With PlotMaker, CAD users can combine any number of files from ArchiCAD or TopCAD, or files in the common DXF, HPGL and PICT formats in one layout and scale, arrange, edit and manipulate them as needed. CAD files can be opened as editable drawings, and PlotMaker provides tools for drawing freehand lines, line segments and arcs, creating text and adding hot spots or control points, either on an imported drawing or on the layout itself. Once a drawing is placed on a layout, it can be scaled, rotated and moved to any position. PlotMaker supports all the popular pen and electrostatic plotters and laser printers, and can even create EPS files and can plot any Macintosh font.
Available with ArchiCAD
Graphisoft; 400 Oyster Point Blvd., Ste. 429; So. San Francisco, CA 94080; 415-266-8720, 800-344-3468 or 415-871-5481 (fax)

■ **PowerCADD 1.0**
Power Macintosh drawing and plotting
Power Macintosh 6100 or larger.
Accelerated for the RISC-based Power Macintosh, PowerCADD opens, saves and redraws with blistering speeds, even on the largest of drawing files. PowerCADD's high-end features and functions are identical to those of PowerDraw. PowerCADD features built-in plotting and a Pascal Macro Programming language with compiler, as well as an External programming environment to allow individual and third-party development of trade-specific "plug-ins." Many Externals are included with PowerCADD that allow users to customize the software for their needs. Other features include object and grid snapping; full tool geometry, including Bezier curves; parametric door/window insertion with automatic wall trimmming; drilled/tapped hole insertion; unlimited layers; associated dimensioning; color by layer; multiple scales per drawing; scale by layer; trim/extend; isometric shearing; Clip, Combine, Attach; user-definable command keys; and more.

PowerDraw 5.0
High-end, advanced two-dimensional CAD design and drafting system
Macintosh Classic or larger; 2 MB of RAM.
PowerDraw is a full-featured CAD package known for its intuitive interface. The software includes high-end features, such as built-in plotting and a Pascal macro programming language (with compiler), as well as an External programming environment for internal and third-party development of "plug-ins." This External modularity allows users to customize PowerDraw to accommodate their needs without wasting memory or learning time with unneeded tools. Other production-oriented features include: 500 user-definable keyboard commands, unlimited layers, multiple scales on one layer, scale by layer, color by layer, full color and bit-image support, parametric symbol insertion, comprehensive dimensioning tools, interactive snapping for precision drawing, isometric and perspective drawing tools and interactive keyboard editing. An exhaustive tool palette with basic geometric drawing tools is included. Trade specific tools include architectural door/window insertion and wall clean-up tools. Mechanical long break, tapped hole and hex bolt tools are also standard with the package. DXF, Adobe EPSF, as well as other file format import/export capabilities are available separately as Plug-in modules. Ease of use, speed and customizability are key to PowerDraw.

PowerDraw Translator
Two-way file conversion between PowerDraw, PICT, Illustrator 88 (EPSF) and DXF
Macintosh Classic or larger; hard disk drive; drawing software.
PowerDraw Translator converts drawings between PowerDraw, Illustrator88/EPS, PICT, PICT II and DXF file formats into fully editable drawings. It also gives users the capability to read previous versions of PowerDraw, Clipboard/Scrapbook, MacDraw, Claris CAD, Library and HPGL file formats. Features include: document previewing; multiple windows open at one time; document editing through cut, copy and paste; and layer, scale and drawing size manipulation. Multiple translation options include saving a DXF file as a whole drawing, only visible layers or only selected objects; and options to save files as an Illustrator 88(EPS) drawing to fit a certain size or scale percentage. Other features include: retained text integrity, layers, grouping, color and batch conversions for the stand-alone version. PowerDraw Translator is System 7 compatible. External versions are available for PowerDraw 4.0 or later users and PowerCADD 1.0.
$275 retail; stand-alone version
$249 retail; external version

SewSoft Bodice V2.1
Prints custom-fitted clothing patterns for blouses and shirts
Macintosh 512K or larger; ImageWriter or LaserWriter.
SewSoft Bodice is designed to bring speed and simplicity to the business of making custom-fitted shirts and blouses for sewing professionals and garment makers. The program uses ten personal body measurements to tailor clothing. These measurements specify a basic bodice, sloper or master pattern, which is printed onto six or more pages of standard printer paper. These pages are joined to form a full-size, precise pattern from which garments can be cut and sewn. The measurements can be modified to produce a new sloper whenever there is a significant weight loss or gain. SewSoft Bodice accommodates any adult body size or shape for blouses, tops or shirts. It also facilitates the adjustment of commercial patterns to individual shapes and can be used to modify styles and copy the design of a ready-made garment. The sleeve is included. SewSoft Bodice is System 7 compatible. A Windows version is also available.
$79.95 retail
$15 retail; demo disk with measurement instructions
Andros SoftWear; 3419 E. 21st St., Ste. 5; Vancouver, WA 98661; 206-750-1021

SewSoft Pants V1.13
Prints custom-fitted pants patterns from individual body measurements
Macintosh 512K or larger; ImageWriter or LaserWriter.
SewSoft Pants is the latest companion to Andros SoftWear's Bodice and Skirts programs. The 10 measurements needed for Skirts are supplemented by six more measurements for Pants for three body types. Use of calipers is explained for measuring cross-sections of the body for accurate fitting. The manual, which is a standard 8.5 by 11-inch format, describes how to operate all aspects of the program, and gives useful design, fitting and sewing information. By increasing the individual sizes according to standard steps, users can get a series of graded patterns from each of the SewSoft programs. SewSoft Pants is System 7 compatible. A Windows version is also available.
$79.95 retail
Andros SoftWear; 3419 E. 21st St., Ste. 5; Vancouver, WA 98661; 206-750-1021

SewSoft Skirts V1.37
Prints skirt patterns: straight, circular or panel; for men or women
Macintosh 512K or larger; ImageWriter or LaserWriter.

SewSoft Skirts is a companion to SewSoft Bodice and Pants. Three different styles of skirts are provided: straight, circular and panel. The Straight Skirt program will calculate and plot side-seam curves, two darts each for front and back (if needed) and length. Unique Andros skirt styles are also suitable for men. As illustrated in the manual, 10 measurements are required and may be saved to disk under the person's name. Output is to either the LaserWriter or ImageWriter, with clearly marked page numbers and crosshairs to overlap separate pages. SewSoft programs are compatible with plotter output if an extra driver program is purchased. SewSoft Skirts is System 7 compatible. A Windows version is also available.
$79.95 retail; educational packs and site licenses available
Andros SoftWear; 3419 E. 21st St., Ste. 5; Vancouver, WA 98661; 206-750-1021

SignPro
Sign making software
Macintosh with FPU; System 7.0 recommended.

SignPro is a full-featured sign design, presentation and production CAD/CAM program. It includes a built-in font converter, vectorization (for using scanned files) and digitizing, using either a mouse or a digitizing tablet. Signs can be readily designed on the screen and can be output to size using various routers, engravers or vinyl cutting equipment.

Snap! 3.18
Two-dimensional CAD system
Macintosh Plus or larger; 2 MB of RAM.

Snap! is a full-featured, two-dimensional CAD system. The one billion unit design plane, along with user-definable units of measure, provide precision data input using key-ins or the mouse. The program supports symbol libraries with user-definable, fully nested symbols. On screen text input provides annotation of drawings and the special Snap! fonts allow placement of text at any angle. A wide variety of element, fence and active group transformations are included. An autodimensioning feature supports a variety of dimension modes and display settings. The program has built-in support for Houston Instrument and HP plotters and a custom PostScript generator for high quality output to LaserWriters. PICT files, copy to the Clipboard, and PostScript and plotter spool files allow transfer of Snap! drawings to other applications. Custom symbol libraries are available for architectural and engineering disciplines. Other major features of Snap! include cross-hatching, user-definable icon menus, reference file overlays, virtual screens for instant redraws, PICT file input and support for HPGL and DMPL compatible plotters.

The Snap! Translator, a direct translator to and from the Intergraph IGDS format, is available as a separate application. All translation of files is accomplished on a Macintosh, and file transfer can be accomplished using any protocol capable of binary file transfer. An optional feature allows the scaling of drawings during the translation process.

Snap! 3.28
CAD system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive recommended.

Snap! 3.2 provides all the CAD functionality of previous versions of Snap!, in addition to features required for facilities management, bills of material and other applications requiring a mix of graphic entities and a non-graphic database. Snap! allows attachment of attribute data entry and display forms to any symbol, group or primitive object in a CAD drawing. Attribute data in Snap! is associated with CAD entities through the use of data forms (special Macintosh Dialog resources). These resources can easily be customized to any application with a resource editor, and can contain as many text entry fields as desired. Data can be entered directly into the forms while viewing a CAD file or imported from any database or spreadsheet program capable of tab-delimited output or exported from Snap! to database programs. Snap! uses a key-field in each data record to maintain the proper connection with records in the external database. An attribute display dialog within Snap! allows toggling of forms and individual fields within each form for display and plotting. Data fields can also be positioned on a CAD drawing like text elements.

A related product, the Snap! Document Processor is used to automate plotting of up to 5,000 drawings and is compatible with either Snap! 3.1 or 3.2 files. The Document Processor is designed to be used with HPGL-compatible plotters; either automatic roll feed or page feed printer/plotters (such as JDL series). Groups of drawings can be assigned a template file, controlling display levels to be plotted. The template file also determines display characteristics of the attribute data for drawings created with Snap! 3.2. By selecting a data file, the Document Processor can be used to automatically merge attribute data into each drawing before plotting.

Touch-3D
3-D/2-D unfolding program
Macintosh Plus or larger; 1 MB of RAM.

Touch-3D imports models created in other programs, unfolds them and exports them back again. Users can edit the result in their favorite drawing program and print the unfolded flat model on any 2-D printer, cut it out and fold it into a physical 3-D model. Touch-3D unfolds models consisting of three or four-sided closed polygons. New elements can not be added but any vertex in the model can be moved. Touch-3D imports and exports 2-D/3-D DXF files, 2-D/3-D MiniCad+ text files, EPSF files and Adobe Illustrator files. Touch-3D can be used for industrial design mock-ups, package design, architectural scale models, tin work, etc.

TouchCad
Three-dimensional surface modeler
Macintosh Plus or larger; 1 MB of RAM.

TouchCad is a three-dimensional surface modeler that can be used to convert screen images into solid scale models and produce accurate production drawings and assembly instructions. TouchCad uses free-form defined, four-sided three-dimensional polygons to draw models. TouchCad exports DXF files, two- or three-dimensional, seen from any view, rotated or unfolded. It calculates surface areas and center of gravity in full 3-D. In addition to the front, top and side views, TouchCad also has an unfold view. This means that the program automatically calculates the flat unfolded shape of the model, which can be plotted on a HPGL-compatible pen plotter. Users just plot the model, cut it out and fold it.
$795 U.S. retail
Lundström Design; Ekhagsvägen 7; 104 05 Stockholm, Sweden; (0)8-15 46 63 or (0)8-15 82 85 (fax)

Vector That
Generates vector data from raster images
Macintosh Plus or larger.

Vector That is software that will generate vector data from raster images. It operates on a variety of image file formats (PICT, TIFF, etc.) to interactively create vector data based on user selections. It is divided into six modules: Image File Reader; Image Marking (Edge Detection) Engine; Marking Management; Vectorization Engine: Image and Vector Display; and Vector File Writer. The two or more important modules are the image marking engine and the vectorization engine. By keeping these generic in nature, and encapsulating the specific methods of their operation in "plug-in" tools, Vector That provides not only functionality needed for the first release, but also ensures that future versions can be easily enhanced.

Vellum 2D V2.50
Two-dimensional design and drafting
Macintosh SE/30, II or Quadra family; 5 MB of RAM; hard disk drive; math coprocessor.

Vellum is a two-dimensional design and drafting package for professional and non-professional mechanical engineers, designers and architects. It includes unique technology called the drafting assistant (patented). The drafting assistant automatically locates endpoints, midpoints, tangencies, center points, intersections and any other logical geometric constraint. This capability makes precision drafting as simple as free-hand sketching, yet accurate to 16 decimal places. Vellum also includes integrated parametrics to create "dimension driven drawings," letting users sketch without thinking about exact dimensions until they are ready to dimension and reshape the drawing. Vellum comes with features normally only available on more expensive CAD packages: associative detail view, associative dimensions, NURB Spline curves, linear and polar array duplication, mechanism animation and more. DXF, IGES, EPS, PICT and HPGL translators are built in. Built-in drivers for HP, HI and CalComp plotters are also provided, plus Plottergeist plotter drivers.

VersaCAD Drafter
Two-dimensional drafting program
Macintosh II or IIx; 2 MB of RAM; Macintosh Plus or SE; 1 MB of RAM; math coprocessor recommended.

VersaCAD Drafter is designed for mechanical and architectural designers needing professional, two-dimensional drafting capabilities. The system features all of the two-dimensional drafting tools from the VersaCAD/Macintosh Edition system. VersaCAD Drafter provides users with a variety of drawing objects and attributes, floating-point accuracy to 16-decimal digits and unlimited visual symbol libraries. Full editing, grouping and dimensioning capabilities are included, as well as pan and zoom, grid and snap, cut and paste, up to 250 drawing levels and 10 units of measurement. For geometric construction, the program offers extend and trim, parallels and perpendiculars, fillets, tangents, ellipses, freehand sketching and Bezier curves. Object information such as length, radius and perimeter can be displayed at any time, along with cross-sectional calculations. It also features cross-hatching of regular and irregular boundaries. VersaCAD Drafter is compatible with VersaCAD/

Virtual Gibbs
Computer-aided design and manufacturing
Macintosh LC or larger; math coprocessor.

Virtual Gibbs integrates technologies that achieve three-dimensional, real-time cut part rendering and an interface of graphic realism. Users are able to see the tool actually removing the material from a solid piece of metal, creating a realistic and useful picture of what the part will look like. Virtual Gibbs introduces another technology breakthrough with "multiple process programming." This feature dramatically reduces the time it takes to program a part by automating much of the programming process. A Computer-Aided-Training (CAT) system is integrated into the system and provides a range of capabilities, from simple on-screen reference explanations to free-form prompting. Virtual Gibbs is available on both Macintosh and IBM-style personal computers.

Vertical Markets/ Construction

Accounting 4 Construction Version 5.0.2
Integrated construction accounting system
Macintosh 512KE or larger; hard disk drive recommended; ImageWriter.

Accounting 4 Construction is an integrated construction accounting system that follows the guidelines established by the Construction Specification Institute. The job is broken down first into divisions, then into cost items and finally into cost item types. Job cost is central to Accounting 4 Construction. Any accounts receivable, accounts payable, cash receipt, cash disbursement or payroll can be charged to job cost. The system is flexible enough to handle either cash basis or accrual accounting. Basic accounting features include: general ledger, accounts payable, cash disbursements, cash receipts, payroll and job cost. Numerous reports can be generated including financial statements payroll reports, state and local tax reports, W2s, 1099s, workman's comp reports, labor reports, job cost detail reports and job cost summary reports. Additional features of the package include: check writing, estimates, audit trails, project cost tracking, profit worksheets, automatic general ledger updates and automatic job cost updates.

BidMagic
Estimating program
Macintosh Plus or larger; hard disk drive; System 6.0.5 or later.

BidMagic creates price estimates for residential or light commercial construction projects. It works for new construction, additions, gut/rehab work or remodeling projects. BidMagic creates preliminary "rough" estimates, or high-accuracy finished bids, depending on how much time users spend. To make a BidMagic estimate, users first enter specific dimensions for the project, using special "cards" for general, foundation, roof, structural, exterior, trim and miscellaneous dimensions. BidMagic will use these measurements to "suggest" quantities for the materials and labor that will be used on the project. Users can use the suggestions, or enter their own quantities, using "pop-up" lists of construction items under each cost category. BidMagic creates a variety of printed outputs, including "room by room" reports for remodeling projects. It also exports directly to MacNail Estimating for even greater bidding accuracy.

Budget & Construction
Allows users to project budgets, appraisals, programming and control
Macintosh Plus or larger; 4 MB of RAM; 800K disk drive or hard disk drive; System 7.0 or later.

Budget & Construction, a module of the Manapro Professional Software Series, is designed to budget and control construction projects. This multilingual application allows unlimited number of items, categories for grouping items with variable coding, auxiliary codes with up to 15 characters, automatic updating of costs, year-to-date information online, user-definable reports, printed formats and calculation of the unit price analysis. It can handle up to four groups of sub-items. Sub-items and unit price analysis can be imported from spreadsheets and word processors. This tool controls a user's budget schedules, resource allocations, appraisals and expenditures efficiently and accurately. It can create a schedule for each budget, and define the amount of budget necessary and period of time allowed to complete and execute the project.

Complete Construction Cost Estimator
Estimates the cost of construction
Macintosh 512K or larger; Microsoft Excel or Works.

The Complete Construction Cost Estimator estimates the cost of house and apartment construction using a square-foot calculation, along with a 600-item unit cost estimate supplement. The program follows the chronological sequence of construction from permits through completion. A user enters actual dimensions from blueprints, along with square-foot prices, and estimates are calculated. More than 22 areas are considered (concrete, drywall, roofing, etc.). The unit cost estimator supplements the areas that cannot be accommodated by a square-footage evaluation and/or allows the refinement of initial square-foot estimates.

Construction Costing 7.0
Modules that support the decision-making requirements of general contractors
Macintosh Classic or larger; hard disk drive; printer.

Construction Costing is a complete family of integrated application modules designed to support the decision-making requirements of any general contractor company. The system provides consistent information to all people in an organization through its common database and online display and report inquiry capability. The system has been designed with critical attention given to human engineering considerations and industry standards using the latest technology available. The user interface makes the system easy to learn and use for first-time and experienced computer users and provides online help features and multiple window architecture for data entry and display. The standard Construction Costing software offers eight modules, including a Quotation module to produce bids that can be transferred to Job Costing. Estimated costs are tracked and compared to the actual costs of a job for labor, material, equipment and sub-contractors. Invoicing can be generated in full or by release and is integrated to Accounts Receivable. The system features a full set of accounting modules that follow industry accounting standards and provide proper audit trails. Workman's compensation and union benefits cost are applied as cost to jobs and reported for individual employees. Modules include: Quotations, Estimated Costing, Actual Costing, Invoicing, Accounts Payable, Accounts Receivable, Payroll and General Ledger.

ConstructionMac! 3.0
Construction and remodeling
Macintosh Classic II or larger (16 MHz CPU or larger) or Power Macintosh; 5 MB of RAM; hard disk drive; color monitor recommended; System 7.0 or later.

ConstructionMac! estimates residential/commercial construction in U.S. and metric standards. Users enter their dimensions and point-and-click their way to the estimate. It includes Revelar's interface to the Scalex 1000 digital plan scaler — users simply plug this pen-like device into the Mac, roll it along the blueprints and materials & labor are dynamically calculated as they roll along. It includes 10 estimators (Excavation, Concrete, Carpentry, Electrical, Drywall, etc.) for stick estimating, plus an assembly database to estimate by assemblies or SF allowances. Everything is summed to a Project Summary where profit, overhead, tax, etc., can be added. A schedule calculates start and completion dates for each task. Also included is the National Construction Estimator Database of 20,000 items with prices. A page layout designer lets users customize their printed reports. Features include: Board Feet converter, MSF/Area converter, Wallpaper calculator and User's manual. Unlimited toll-free technical support is free for registered users.

The Contractor Solution! 2.0
Construction management
Macintosh with 68030 processor running at 25 MHz or Quadra; Power Mac; 4 MB of RAM.

The Contractor Solution! is a fully integrated construction management package available in single and multiuser formats. The program features estimating with multiple bidding methods, automatic bid quote letters, automated bid request letters, materials sub-assemblies, bill of materials and bid duplication. There is job costing with reports comparing actual costs to budgeted costs. Sub-contract writing and management, purchasing, multiple billing formats, employee relations, equipment tracking, inventory management, payables, receivables and full accounting functions are all provided. It is compatible with CheckMark Payroll for processing payroll checks.

Contractor's Dream
Estimating program
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later.

Contractor's Dream is an estimating program for contractors and sub-contractors. Features include: database uses an easy-to-read description that is 27 characters long; labor and material costs with what-if modeling; actually gives users four types of bids at the end; wall and roof assembly for quick calculations; accumulates bids, saves jobs and percent waste included; works in feet, inches, fractions of an inch and pitch; updates bids or database by percentages; built-in text editor to perform final edits on bids; and more. Contractor's Dream will estimate almost anything and allow users to put in anything else. Estimations include roofing, decking, plywood, paneling, dry wall, brick, block, tile, ceramics, paint, siding, joists, studs, concrete, rebar, insulation, blown insulation, excavations, semi-end dump loads, fencing and more. The program comes with a manual, a 30-minute tutorial cassette and free 800 telephone support.

Electricians PowerBid Estimator And T&M Billing
Electrical estimating, invoicing, accounts receivable, electrical materials and labor database, customer database, proposal/contract
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 3.0 or later.

PowerBid Estimator and T&M Billing is a powerful tool for fast, accurate residential and commercial electrical estimating and billing. It consists of three fully integrated sections: Estimating, Electrical Materials Database and Time & Material Billing. The Estimator creates estimates 50 to 75 percent faster than by hand. This is accomplished using intelligent, built-in assemblies that add in conduit, wire, boxes, breakers and fittings. Job charges are extended into an adjustable Bid Summary. A selling price is generated, which is retrieved by a professional Proposal/Contract. PowerBid allows users to easily adjust all job charges. Any material and labor may be added. The Electrical Materials Database comes complete with commonly used electrical materials, wholesale/retail pricing and labor units. It is easy to update and expand. Search and split-screen functions make for quick location of parts. Materials can be added to estimates directly in the materials database. The Time & Material Billing section features Invoicing, Accounts Receivable and Customer Database. The computer-generated invoice saves time by retrieving material and customer information from the database. All charges are automatically totaled. The result is a professional looking invoice completed in a fraction of the time. To insure payment, an Accounts Receivable report allows tracking of Receivables. Clients can be organized with the Customer Address Book.

ESP — Accounting System
Handles all bookkeeping needs
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ESP — Sales & Office Management.

ESP — Accounting System is designed to handle all bookkeeping needs, with one special difference. ESP accounting is designed so that the charting decisions are determined during system setup. From that point on, very little bookkeeping experience is needed for daily operations. There is an abundance of detailed ledgers, an audit system that leaves nothing to the imagination. The user-direct report system offers three separate default formats for an unlimited number of reports. The finance module keeps track of all active and inactive bank accounts, as well as transactions. An Invoice Payable may be assigned to one account with a secondary association and job costing may be as detailed as required. Printing checks is accomplished with a click. Accounts Receivable can automatically create invoices from jobs, inventory or on the fly. Requires ESP — Sales and Office Management. ESP — Accounting System integrates with Time Management, Sales and Office Management, Estimating & Proposal Creation System, Inventory and Payroll modules. On-site installation and training are available.
$750 retail; plus one time $250 per users license fee
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Estimating & Proposal Creation System
Creates proposals
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ESP — Sales & Office Management.

ESP — Estimating & Proposal Creation System is designed to create proposals, organizing information to fit specific requirements. Information may be stored with all explanations and cost factors in a global library, making it available for future proposals. Cost factors may be tied to Inventory, employee or outside contractors for automatic price updating. Users may connect time directly to individual cost factors of an estimate/proposal or on a time and material job, create the cost factor. A proposal may be changed to contract automatically, contracts to invoices and invoices to account posting, without additional effort. Print work orders are organized by groups, and subgroups include task explanations, do percentage modifications, scheduling and actual to estimated job cost comparisons. It includes complete material lists with options to include vendors, costs and charges. Users can create a billing schedule with up to six progress billings. Print options allow for the use of form documents, custom or a combination of both. Requires ESP — Sales and Office Management. The program integrates with ESP — Time Management, Sales and Office Management, Accounting, Inventory and Payroll modules. On-site installation and training are available.
$325 retail; plus one time $250 per user license fee
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Executive Sensory Perception
Fully-integrated business management system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

ESP — Executive Sensory Perception is a fully-integrated business management system available in single or multiuser versions. This system is designed to meet a user's diverse accounting, customer service, sales, inventory and time management needs. The Basic ESP includes a single-user license, Time Management, Sales & Office Management, Estimating & Proposal Creation System, Accounting and Inventory & Purchase Order System. (ESP Payroll System may be purchased separately.) On-site installation and training services are available, as well as customizing to specific needs.
$1,750 retail; plus one-time license fee per additional user
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Inventory & Purchase Order System
Controls the movement and timing of inventory
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ESP — Sales & Office Management.

ESP — Inventory & Purchase Order System controls the movement and timing of inventory. It is designed to organize supplies into groups and subgroups and to maintain information, such as cost, charge, unit size, stock, supplier and on-order status. Features a low inventory status system and maintains additional information, including graphics, on inventory; such as other goods or service required with the use of an item. With optional fonts users can print bar code labels. The subsystem allows users to organize inventories of non-resale items, such as assets and price only lists. Users can create and post purchase orders or retain for additional and future posting. It features the ability to review and print the purchase history of any given item. Requires Sales and Office Management. The program integrates with ESP — Time Management, Sales and Office Management and Estimating & Proposal Creation System modules. On-site installation and training are available.
$325 retail; plus one time $250 per user license fee
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Payroll & Time Card System
Manages time and payroll
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ESP — Sales & Office Management.

ESP — Payroll & Time Card system is to accurately calculate employee payroll and withholdings. Entries may be as detailed as is required. Select the proper workers compensation code for each entry or let the default stand. Users enter from one per pay period to any number required per day. A report and tracking system allows for detailed information on the time aspect on any job, period or employee including true hourly costs. Track payments due on workers compensation. Prints 8109 reports, 941, 940 and W2's. Combined with ESP — Estimating and Proposal Creation System, users may connect time directly to individual cost factor of an estimate/ proposal or create the cost factor on a time and material job. State specific modules are sold separately. Requires ESP — Sales and Office Management. Integrates with ESP — Time Management, Sales and Office Management, Accounting and Estimating and Proposal Creation system modules. On site training and installation available.
$1,500 retail; plus one time $250 per user license fee
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Sales & Office Management
Organizes information
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

ESP — Sales & Office Management's key feature is its ability to organize information in such a way as to make it readily available to many people and projects. It provides the means to handle vast amounts of information in a relaxed manner. Users can organize their clients, vendors, contractors and employees. Each main record may have any number of associated records. Users can organize information into groups and subgroups. All communications may be recorded — know what letter was written and when. Users can keep time and date stamped notes on conversations, and enter automatic follow-up reminders for anytime now or in the future. The program will even dial the phone and log the call, as well as tell users the time zone. Simple appointment insertion into an appointment book, labels and mass mailings are all automatic. This module includes ESP — Time Management. The system integrates with ESP — Estimating & Proposal Creation, Accounting, Inventory & Purchase Order and Payroll modules. On-site installation and training are available.
$325 retail; plus one-time $250 per user license fee
CORGROUP; PO Box 1265; Madison, CT 06443; 203-458-9363

ESP — Time Management
Manages time and general secretarial functions
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

ESP — Time Management handles all personal and company time management and general secretarial functions. It includes a day binder for convenient transfer of information and an address book to easily organize names, addresses and phone numbers and to maintain general information specific to an individual. The system allows any number of appointment books to keep track of appointments, with options to roll the appointment daily, weekly, monthly or yearly, plus automatic reminders, expense records and printing of daily, weekly or monthly day binder sheets, as well as yearly date calendars. The system creates memos and letters with address and salutation automatically added. A Message Center is provided to automatically remind users of important calls, meetings, follow ups, etc. Users can store any number of graphics/logos to include on envelopes, letters, invoices, etc. A mailing label system, time zone system, automatic dialing and call logging is also provided. The system integrates with ESP — Sales & Office Management, Estimating & Proposal Creation, Accounting, Inventory and Payroll modules. On-site installation and training are available.
$150 retail; plus one time $250 per user license fee

Estimating 4 Construction
Construction take-off and estimating system
Macintosh Plus or larger.

Estimating 4 Construction (E4C) is a complete construction take-off and estimating system. E4C allows users to "teach" the computer how they want to estimate. Users first break an estimate into work items (e.g., brick wall), then develop a series of questions related to the work item (e.g., What size brick?) and assign possible answers. By selecting a specific answer, users will determine the cost items needed for a job. Users then allow the program to calculate quantities needed, or may enter the quantity. In either case, users may edit the quantities at any time. The result is an estimating system that most resembles a company's method of estimating, while exploiting the benefits of the Macintosh. E4C also allows users to perform a number of analyses that will provide an unprecedented number of checks and balances for both them and their client.

Hyper•Estimator 1.1
Approximates additions, new construction or rehabilitation costs; links to MacNail
Macintosh Plus, LC or larger; hard disk drive; HyperCard.

Hyper•Estimator is intended for architects, builders or homeowners who are planning residential construction projects. The program finds the approximate cost of additions, new construction or total rehabilitation work. It also links with MacNail to create finished bids for construction professionals.
$95 retail
$145 retail; packaged with Hyper•Remodeler

InterTrack 2.0
Sales, service and support
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

InterTrack, formerly known as MacHVAC, is a multiuser scheduling, dispatching, accounting and management system developed for any contractor. Users can maintain "live" customer order, on-site maintenance, repair and installation work history. It integrates data on employees, inventory, vehicles, maintenance, customers and vendors with multiple sites and multiple systems. Service contract preparation, automatic scheduling of preventive maintenance, as well as incoming calls and crew assignments, are done in one step. A bulletin board routes critical messages to field personnel when they check in or out of a job, providing an audit trail of responsibility. Purchasing can be radio authorized and resulting inventory can be automatically traced to PO, truck, job and user. Other features include integrated mail merge, productivity analyses, cost and value of inventories.

MacMeasure
Construction take-off software
Macintosh SE or larger; Microsoft Excel 2.2 or 3.0.

MacMeasure is a tool for construction estimators that integrates the measuring speed and accuracy of a CalComp ADB digitizer board with a user's existing Excel spreadsheet. With the assistance of a digitizer, MacMeasure gives the construction estimator the capability to measure quantities from blueprints in seconds. Then, with a click of the mouse, MacMeasure transfers these quantities into existing Excel spreadsheets. No cutting or pasting is necessary. Its graphic duplication of the measurement is one feature that makes MacMeasure unique. Each item is associated with a picture. This picture is a visual record used by estimators to remind them what has and what hasn't been measured. MacMeasure supports Imperial and metric scales, and is capable of creating a custom scale for blueprints that have been photocopied or reduced.

MacNail Accounting 3.4
Job costing/payroll/accounts payable
Macintosh Plus, LC or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 1.5 or later.

MacNail Accounting is designed for small and medium-sized businesses that are run from a checkbook or several checkbooks. It is checkbook-based, single-entry and builder-specific. MacNail includes two types of checkbook ledgers to handle money transactions. It includes separate labor, material and subcontractor logbooks to handle expenses, and sets up cost control worksheets for each project so users can see an "estimated vs. actual" progress report based on costs to date. Labor information from the labor logbook can be used to generate payroll. The payroll system will figure all withholding and employer deductions automatically. It will print 1099s and W-2s, as well as track itemized payroll payments for each employee and for the company as a whole. MacNail provides check printing for its accounts payable system, as well as for payroll. There is also built-in profit and loss tracking that lets users see their income and expenses for each project and for each month.

Estimating, Scheduling and Customizing add-ons are available, as well as package prices
Turtle Creek Software; 201 Babcock Hall; Ithaca, NY 14850; 607-272-1008

MacNail Customizing 3.0
Calculates material unit costs
Macintosh Plus, LC or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 2.2 or later.

MacNail Customizing calculates material unit costs using "assemblies." It automatically adjusts estimator costs based on experience (as calculated by the Job Costing portion of MacNail Accounting). The program creates new customized estimators for use with MacNail Estimating. It allows users to add and delete cost categories from existing MacNail estimators.
$145 retail
Estimating, Accounting and Scheduling add-ons are available, as well as package prices

MacNail Estimating 3.4
Construction estimating for residential or light commercial projects
Macintosh Plus, LC or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 1.5 or later.

MacNail is a complete, integrated construction management package that lets users prepare accurate bids, keep books, monitor job costs, do payroll, schedule jobs and order materials. MacNail Estimating pre-calculates quantities for most construction items, based on fairly simple construction dimensions. It comes complete with a 1,000 item database of residential/light commercial unit prices. It lets users see any part of the bid at any time, and lets users enter any information at any time. If an item is changed, all prices are adjusted automatically. MacNail Estimating includes several specialized estimators for different sizes of projects — using either CSI divisions or 30 MacNail divisions. MacNail lets users change any part of the "innards" of the estimate, making it easy to handle custom work or non-standard details. Users can create their own custom estimators to suit their specific style of construction. MacNail Estimating also links to BidMagic and to the MacNail Cost Control/Accounting, Scheduling and Customizing modules.
$295 retail
Accounting, Scheduling/Material Take-Off and Customizing add-ons are available, as well as package prices
Turtle Creek Software; 201 Babcock Hall; Ithaca, NY 14850; 607-272-1008

MacNail Scheduling 3.2
Project schedules, material takeoffs and reminders
Macintosh Plus, LC or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 1.5 or later.

MacNail Scheduling turns any MacNail estimate into a detailed "time line" schedule. The starting date for each task in the schedule, as well as the completion date for the project, is calculated for users based on the project details in a MacNail estimate. MacNail lets users enter delays and variable crew sizes on different parts of the projects. A lead times command tells users when to call in for special order materials. It's easy to get a material take-off list or a tool list for any part of the project. Special Reminder Lists for each project and Punch Lists for subcontractors help users manage project quality control. MacNail has a link to MacProject II that lets users get a full critical path schedule.

■ **MacNail Spec Writer 3.0**
Creates contruction contracts
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; Microsoft Excel 3.0 or later.

MacNail Spec Writer creates contracts, subcontracts and spec sheets. It includes "boilerplate" legal language covering a wide range of construction situations. Users can add, delete or change any text. Users can also add a detailed description of the project, using information from a MacNail estimate, a MacNail schedule or a BidMagic bid. Contracts can be opened, formatted and printed with any word processor or with the Excel spreadsheet.

Turtle Creek Software; 201 Babcock Hall; Ithaca, NY 14850; 607-272-1008

■ **Revelar's Scalex-Interface**
Digital plan scaler
Macintosh Classic II or larger (16 MHz CPU or larger); 4 MB of RAM; System 6.0.7 or later; hard disk drive; color monitor recommended.

Scalex-Interface lets users use the Scalex 1000 digital plan scaler with all their Macintosh applications. The Scalex 1000 is an electronic pen-line device with a wheel at the tip that users roll along their blueprints. Infrared lights detect wheel rotation and calculate scaled length. Accuracy is +/- .25 percent. Users plug the Scalex into their Macintosh, set the scale and roll it along their blueprints. The length is dynamically updated on the screen. After selecting the destination application (spreadsheet, database, etc.), users enter the value. Features include: on/off switch; linear, square or cubic measurements; port selection (printer/modem); set or receive length, count or constant values; wheel rotation sense; scale factor type (ratio, inch, etc.); 52 pre-set scales; and units of measurements (US and

Metric). It also includes unlimited toll-free technical support.

TransAction!
Construction loan disbursing software
Macintosh LC III or larger; 8 MB of RAM; 40 MB hard disk drive; 14-inch monitor.
TransAction! is a complete software solution for construction loan disbursing. TransAction! has been designed to eliminate as much risk as possible from the construction disbursing process and to streamline much of the necessary paperwork and legal requirements. For banks, builders, title companies or title agents, TransAction! provides a whole new level of control and peace of mind. TransAction!: generates all of the proper documentation for construction loan management, including construction loan agreements, contractor worksheets, affidavits, security agreements and inspection reports; handles contractor, subcontractor and vendor payments; facilitates the collection of lien waivers; tracks the Construction Loan and all line item budgets; generates extensive reports on all disbursing activity; and provides remote access so that up-to-date information is instantly available to the bank, title company and builder.
$12,495 starting price retail; includes hardware and software (multiuser system include client and client/server software)
Information Reporting Technologies, Inc.; 931 Pheasant Woods Dr., Ste. 200; Manchester (St. Louis), MO 63021; 314-394-1414 or 314-230-0929 (fax)

WoodWrite CAD
Computer-aided design for architectural woodwork
Macintosh LC or larger; 6 MB of RAM; hard disk drive.
WoodWrite CAD is a powerful two-dimensional CAD package for custom woodworkers. Features include: fully menu driven, with tear-off menus; unlimited undo and redo of all drawing creation steps; intelligent snap automatically locates drawing points for a user; full range of constraints, including parallel, perpendicular, tangent, offset, orthogonal, angle angular, length, adjacent, between; automatic creation of plan views from elevations; automatic creation of perspectives from one plan and two elevations; automatic creation of elevations from floor plans; automatic blow-up of detail; dynamic linking of details with their blow-ups (change one and the other changes); multiple scales on same page; smart symbols that can be scaled, rotated, flipped and resized as they are entered; automatic linking of like symbols; automatic substitution of one symbol for occurrences of another; smart symbol data and graphic information can be exported to any computer system; database export capability; cabinet Smart Symbols library that allows automatic creation of full bills of materials directly from the CAD drawing; bill of materials generation for custom items; display list support for instant redraw; file interchange with AutoCAD, IGES, PostScript, 3D programs and PICT; integrated macro generation capability; integrated plotter drivers; tile prints fax-ready hard copies from D- or E-size drawings; double floating point accuracy; export this accuracy to CNC, point to point boring machines and computer-driven saws; and more.
$3,750 retail
WoodWrite Systems; 612 Elmira Rd.; Ithaca, NY 14850; 607-272-1444 or 607-272-3980 (fax)

WoodWrite Cut List And Panel Optimizer
Cutting lists and panel optimization for architectural woodwork
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; Microsoft Excel 3.0.
With the WoodWrite Case Work Cut List, a person in the office can generate accurate cut bills. The Panel Optimizer can then read these cut bills and optimize cuts for the panel saw. Users save money by producing less waste. Case Work Cut List features include: standard casework; custom casework; user defines settings; itemizes hardware; automatically linked to Panel Optimizer; user defines building style; and instantaneous change over to new styles. Panel Optimizer features include: allows users to adjust pieces after optimization; generates labels for each piece; tracks inventory of unused sheets; optimizes by rip or cross cut; and user defines kerf and trim size.
$3,250 retail; Cut List
$1,700 retail; Panel Optimizer
WoodWrite Systems; 612 Elmira Rd.; Ithaca, NY 14850; 607-272-1444 or 607-272-3980 (fax)

WoodWrite Estimating
Fast, accurate estimating for architectural woodwork
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; Microsoft Excel 3.0.
The WoodWrite Complete Estimating Package helps users to do fast, accurate, consistent estimates. They are entered in standard forms, so they can be checked by others in the company. The package includes: List Manager & Door List (estimating and item management), CabEst (casework estimator), TrimEst (standing and running trim estimator), TopEst (countertop, shelving and panels estimator), Sash & Door Est (sash, door and frame estimator), SpecialEst (special items estimator), AWI Costbook Tables and Job Margins (margin and scheduling projections).
$7,650 to $8,450 retail; all templates
WoodWrite Systems; 612 Elmira Rd.; Ithaca, NY 14850; 607-272-1444 or 607-272-3980 (fax)

WoodWrite Project Management & Job Cost
Project management for architectural woodwork
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.
WoodWrite Project Management & Job Cost database can track the information users need and provide a full range of reports. Through automatic relationships, material and labor usage are posted directly from the purchase orders and time card entry systems. Purchasing can be done for a job on an item by item basis or material can be assigned into inventory. Inventory can be reassigned to a job at any time. Change orders, work orders and ship tickets are all tracked by the system. There are many standard reports, as well as the capability to create user-defined adhoc reports and graphs. The program is multiuser.
$6,500 retail
WoodWrite Systems; 612 Elmira Rd.; Ithaca, NY 14850; 607-272-1444 or 607-272-3980 (fax)

WoodWrite Takes Off!
Provides automatic take offs from blueprints or scan film
Macintosh LC or larger; 6 MB of RAM; hard disk drive.
WoodWrite Takes Off! provides automatic point-and-click take offs from any scale blueprints or scan film, and of any legibility. It provides a database manager for the listed information, and the program automatically links to WoodWrite Systems Estimating and WoodWrite Systems CutList. Users can export data to any database, spreadsheet or cutting list program. It interfaces with all industry standard CAD systems to create scaled floor plans and key plans.
$4,750 retail
WoodWrite Systems; 612 Elmira Rd.; Ithaca, NY 14850; 607-272-1444 or 607-272-3980 (fax)

Vertical Markets/Education

■ AdminEase
College, post graduate or secondary school administration made easy
Macintosh Plus or larger; System 6.0.2 or later; hard disk drive.

AdminEase automates the routine administrative functions of a school. The Applicants section tracks the completion of all steps required for acceptance, including reception of financial aid prerequisites. Programs (major) are defined by the user and classes assigned to them. Students are tracked and reported on by their program status, their registration status and by their financial status. Extensive reports include: applicant status; class/instructor scheduling; demographics; grading/transcript generation; student/faculty data; trimester and cumulative GPAs; and class drops/withdrawals. The Financial section allows automatic charging by the course or by the program enrolled/taken. It handles progressive tuition payments, refunds and credits; monthly statements, aging and late charges; and miscellaneous fee tracking and adjustments. AdminEase can be customized. It is Helix based.

Apple Media Kit
Multimedia authoring/digital publishing tool
Macintosh with 680x0 processor; System 7.0 or later.
The Apple Media Kit is a multimedia authoring/digital publishing tool. Products developed with the Apple Media Kit use QuickTime to playback on both computers using Microsoft Windows and Macintosh computers. The Apple Media Kit includes two tools, the Apple Media Tool and the Apple Media Tool Programming Environment. Both tools are designed to work together for cross-platform multimedia development. The Apple Media Tool allows users to assemble media elements and add interactive features without writing any code; uses object-based authoring, for rapid creation of prototypes using rough-draft media elements; preserves interactive connections when finished media elements are substituted for rough-draft media elements; optimizes hard disk-based and CD-ROM-based projects; and allows users to author on Macintosh and simultaneously deliver projects on Macintosh and Windows systems. The Apple Media Tool Programming Environment includes both a new programming language and a new application framework; combines the power of an object-oriented programming language with the ease of use of a scripting language; makes project code portable between Macintosh and Intel-standard computers running Microsoft Windows; and gives access to both Macintosh and Microsoft Windows toolboxes through a C language interface.

Authorware Professional For Macintosh 2.0
Interactive multimedia authoring software for training and education
Macintosh Plus or larger (Macintosh II family with 4 to 8 MB of RAM recommended); hard disk drive; System 6.0.2 or later.

Authorware Professional is multimedia authoring software for training and education. Visual programming allows non-technical users to build applications without scripting. Eleven design icons provide full authoring functionality and a powerful development platform. The software provides a full range of sound, animation and video in applications. It imports 3D models from Swivel 3D, animation from Macromedia Director or Three-D, sounds from MacRecorder, as well as all standard Macintosh file formats. A run-time module lets users publish and distribute applications.

Bobbing GradeBook
Allows educators to record, edit, average, plot and report grades
Macintosh 512K or larger.

Bobbing GradeBook allows educators to record, edit, average, plot and report grades. The screen display looks like a paper grade book, including dog-eared pages and spiral binding. To turn the page, click on the dog-ear. To edit a student name or grade, point to its cell and type. Bobbing GradeBook performs all calculations in the background, even as new grades are being entered, so averages are always up to date. A single click instantly shows a trend line or histogram; double-click for reports or statistics. Full undo is supported.

ClassBase
Classroom information management system for teachers and administrators
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

ClassBase is a K-12 classroom/school/district information management system designed for all educational environments. ClassBase covers student information, behavior notes, attendance, grades, lesson plans and more. Users can track multiple classes and/or subjects in a logical and flexible manner. Series I, a single-user program, allows teachers to track all classroom information from home, at school or both. Series II, a multiuser system, is designed to function in a networked classroom environment. Using central file serving technology, ClassBase II tracks and collects all student information in an online and real-time manner. Teachers collect vital student information at its source and the information is immediately accessible by all levels of the school and district's administration. ClassBase II is a cross-platform system that can utilize multiple non-Apple server hardware. ClassBase II's Custom Report Generator allows users to create custom report environments (data relationships and filters) and layouts. Once created, the custom reports can be printed at any time with up-to-the-minute information. On-site training is included in most Series II purchases and customizations are available.

Course Builder V4
Visual authoring language to create stand-alone teaching, testing and training applications
Macintosh Plus or larger; 2 MB of RAM (required for authoring); hard disk drive required.

Course Builder is an authoring system for creating interactive training programs and public information systems. Using a visual programming interface, Course Builder removes the programming barriers to generating multimedia presentations, electronic textbooks, simulations and interactive training courses. Built-in features, such as graphics editing, animation and digital sound support, make the presentation of information easy and powerful. Dialog boxes, mouse clicks, user variables and simulated controls are used to receive and interpret input. Course Builder automatically tracks user performance and will allow the course to branch according to past answers or in sophisticated automatic and random ways. Course Builder options include a video module, which adds the capability to synchronize interactive video using on-screen button controls; and QuickTime compatibility through the QuickTime Module. Courseware created with Course Builder is stand alone and can be distributed without royalties, licensing or run-time disks required. Course Builder is System 7 compatible, supporting TrueType and 32-bit addressing.

Da Poma GB
Grade-book manager
Macintosh 512K or larger; external disk drive or hard disk drive; any printer selected by chooser.

Da Poma GB is a grade book management program that allows a teacher or professor to record and calculate class grades. All editions allow student scores to be weighted by category or proportionally; up to three low scores can be dropped for each student; any number of scores to be excused; the final grades can be weighted by grading period; and grade break points can be adjusted to fit the grading need or three optional standard break points can be used. The program also contains a report that displays raw scores in a form similar to spiral-bound grade books. Other reports include individual student grade, individual raw score and class grade lists. The transfer of reports to other programs via text documents is also provided. The elementary edition handles up to 75 students per class, and the university edition handles up to 375 students per class. Da Poma GB is 32-bit clean for System 7 and 680X0 emulation on Power Macintosh.

Dasher
Foreign language authoring system
Macintosh 512K or larger; System 6.0.7 or later.

Dasher is a foreign language authoring environment for the Macintosh. Lessons created with Dasher help students build language skills in vocabulary, structure and listening comprehension. Multimedia elements of graphics, sound and videodisc control can easily be integrated into these lessons. Dasher's visual mark-up guides students to correct answers. Other innovative features are Dasher's ability to record student performance and provide a transcript of the student's progress through a lesson. Dasher currently supports Spanish, French, German, Italian, Portuguese, Latin and English. Site licensing is available, as are videodiscs that can be used in authoring lessons. Free demos are available.

Data Logger
Allows users to use a Macintosh and either the Universal Lab Interface or the Serial Box Interface with a number of different sensors and probes
Macintosh Plus or larger; System 6.0 or later.

Data Loggers allows users to use a Macintosh and either the Universal Lab Interface or the Serial Box Interface with a number of different sensors and probes, including pH electrodes, thermocouples, magnetic field sensors, light sensors and pressure sensors. Data collected are displayed graphically on the screen and can be manipulated, saved on disk or transferred to other Macintosh programs. Two probes may be used at once. Universal Lab Interface or Serial Box Interface, sensors and probes are sold separately.

■ **The Digital Chisel**
Educational multimedia authoring software
Macintosh LC or larger; 4 MB of RAM; System 6.0.7 or later.

The Digital Chisel is educational multimedia authoring software. Users do not need to be programmers to create interactive multimedia presentations, storybooks, lessons, reports or portfolios using libraries of graphics, QuickTime movies, sound, animation and text. Users can create full-color graphics with the built-in paint and draw tools, record and play back sounds, "shoot" and record color animations and make power-buttons that can control projects. Users can also create speaking text, hypertext (for pop-up information), path animations and control multiple laserdisc or CD-ROM players — all without scripting. Users can use the built-in templates to instantly create essay, multiple choice, fill-in, true/false, matching and picture point-and-click questions for interactive lessons that provide timely, accurate feedback. A special feature allows for action on a wrong answer so users can author truly adaptive lessons that respond differently to each user. A built-in database allows for easy, yet complete record keeping. All pertinent information is recorded for each user — name, ID, total time on task, number of questions answered, raw score, how many were answered right and wrong, the response to each question and the full text of all essays. A completed Digital Chisel project can stand alone or become an integral part of the other curriculum-based programs coming soon from Pierian Spring Software.

DisciplinePro
Analyzes and reports data trends in numerous formats
Macintosh Plus or larger; FileMaker Pro.

This easy and affordable option uses FileMaker Pro, the friendly database program. Even a novice user can view, retrieve or enter data in a variety of different ways. The easy mouse-driven interface and FileMaker Pro will make a user's first experience with DisciplinePro a productive one. DisciplinePro's features empower a principal to analyze and report data trends in numerous formats. DisciplinePro is particularly useful during parent or student conferences and administrative meetings. Included in its multiple types of preformatted reports are: individual student summary; daily suspensions; teacher summary; disposition summary; detention attendance management; and teacher incident count.

■ **Easy Grade Pro**
Grading program; grades 1 to college level
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later; color monitor recommended.

Easy Grade Pro is a powerfull grading program that offers an abundance of easy-to-use grading, attendance, seating, analysis and reporting tools. Easy Grade Pro integrates all classes in a single file. This single file lets users save time and build reports on more than one class, yet still allows users to manage classes individually. A single gradebook can record up to 54 unique classes with more than 13,000 students and 3,000 assignments. Features include: extensive summaries that show performance in nine ways; 14 reports with print preview that may be customized; grade scale, categories, weighing, calendar, comments, rounding, font, colors, display and more are easily customized; class and score note features allow users to record observations, as well as scores; networkable; and password protection.

Easy Grade Pro 2.0
Gradebook management
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive; System 6.0.5 or later.

Easy Grade Pro offers an abundance of powerful grading, attendance, seating, analysis and reporting tools in a format that is extremely fast, easy to use and fun. Everything a teacher does for a school year is put into one gradebook file that can contain dozens of classes and thousands of students and assignments. Each class offers a complete set of grading, attendance and other options. The customizable floating tool palettes offer dozens of tools. Scores and attendance can be entered quickly by clicking on the tool palette. Extensive summaries and reports can combine data from several classes and subjects. Reports include progress, gradesheets, rosters, missing work, summaries, mailing labels, seating charts and more. Other features include: security, color, networking, print preview, porting, balloon help, full editing, full undo and more. It is not copy protected.

Easy I.E.P.
Takes the time and stress out of writing Individual Education Plans
Macintosh Plus or larger; hard disk drive.

Easy I.E.P. is designed to take the time and stress out of writing IEPs. Users can record their entire meeting and, in many cases, will type very little. Users choose from lists of comments they create to fit their needs by clicking on the comments they want to use. Users enter the goals and objectives they use all the time in a master file and never have to type them again. Master goals and objectives can be modified or new ones added to fit the individual student as an IEP is being written. A complete history of all IEPs are saved and available at all times. All mandated criteria for IEPs are a part of each IEP, its goals and objectives. Individual student information, such as address, phone number, school schedule, parents name, etc., are also kept.

ECI Daycare Manager
Day-care center management
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

Daycare Manager helps automate those tiresome tasks associated with the operation of a small day-care center without requiring extensive computer knowledge. Family and child demographic information, including pertinent health information, is maintained. Also included is the ability to track child attendance, meals served, authorized pick-up individuals and staffing. Daycare Manager will also perform periodic, consolidated billing by family based on a variety of user-selectable billing methods. Many standard reports are included. Customization services are also available.
$495 retail; single user (multiuser version will be available)
ECI The Computer Authority; 3909 Center Point Rd. NE; Cedar Rapids, IA 52402; 515-753-6676 or 800-733-6675

Educational Budget Management System
School-based planning and budgeting program
Macintosh 512KE or larger; external disk drive or hard disk drive; ImageWriter or LaserWriter.

The Educational Budget Management System allows school administrators to develop program budgets. Fund, Location, Function, Program and Object reports can be generated to screen or to a printer. Location budgets can be summarized and compared with one another using Summary and Comparison reports. Major objects and subtotals can also be generated. Features include support for three levels of management; the ability to create and modify program plans in spreadsheet format; program plans can be merged together to form larger budgets; automatic fringe benefit calculations; alternate program plan configurations may be entered, ranked and analyzed; annual budget rollover option to create next year's budget data files; total budget size up to $2 billion; ability to play what-if scenarios with budgets; user-defined Chart of Accounts; and more.

Event Counter
Collects data from a Radiation Monitor
Macintosh Plus or larger; System 6.0 or later.

Event Counter collects data from a Radiation Monitor (Geiger counter). The data is graphed in real time as the data is being collected. Both counts/interval and distribution graphs can be produced. Half lives and the randomness of radioactivity can be studied. Once the data is collected, it can be saved or transferred to another application. The Radiation Monitor connects to the Universal Lab Interface, which interprets the data and relays it to the Macintosh via the modem port. Universal Lab Interface and Radiation Monitor are sold separately.

ExamWriter
Exam generator
Macintosh 512K or larger.

ExamWriter is a worksheet or exam generator designed to assist teachers in all subject areas. From convenient teacher-designed question banks, questions are easily selected to create exams, quizzes or assignments. Other features include: full Macintosh interface compatibility; quickly create multiple choice, true/false or written answer question types; mix and match the question types and import from text files; full control over written answer question layout and blank or lined spacing; cut and paste graphics from the Clipboard; key word or phrase searching in a bank; global change options; create dynamic math and science questions using up to five different teacher-defined variables in each question; simple question selection; multiple exam printouts with scrambling of distractors and questions options; exam and question preview; and a complete answer key provided with each exam, quiz or assignment created.

Expanded Book Toolkit
Lets users create electronic books
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7.0 or later); hard disk drive; HyperCard 2.1 or later; System 6.0.7 or later.

With the Expanded Book Toolkit, users can create electronic books with the same features found in Voyager's Expanded Books. Users can publish electronic editions of any existing work or create entirely new works. Expanded Books are easily constructed from almost any word processing or page-layout program. Easy and interactive options help users create annotations, indexes, tables of contents and cross references. The finished book will have numerous text highlighting and page marking capabilities, along with wide margins and a "notebook" for reader comments. The powerful built-in search feature lets readers of a book look for "first," "last," "next," "previous" and "all-in-context" occurrences of any word. An Expanded Book can also incorporate text links, special pop-up and reference menus and links to other software. Audio clips, photographs, QuickTime movies, spreadsheets and more — almost anything that's on a Macintosh can be in a book. And computerized "typesetting" makes a volume look smooth, professional and "book like."

First Class Gradebook
Grade management program
Macintosh Plus or larger; 1 MB of RAM (2 MB with System 7); hard disk drive; System 6.0.2 or later.

First Class Gradebook is an easy-to-use grade management program with the power and flexibility that teachers require. Unlimited data storage capacity means no more worries about class sizes or numbers of assignments. Teacher-defined grade scales gives teachers flexibility when working with their own specific grading needs. Multiplatform compatibility allows teachers to user their gradebook data on Macintosh and MS-Windows computers, without any additional translation software. First Class Gradebook provides all the gradebook support capabilities that teachers need in one highly flexible and easily expandable program.

Fund Tracker
Fund-raising management system
Macintosh Plus or larger (Macintosh LC III or larger recommended); System 6.0.3 or later.

Fund Tracker is a full-featured fund raising application. Fund Tracker Management Systems have been designed specifically for colleges and universities in coordination with development professionals. Based on the powerful Omnis 7 relational database structure, pertinent information is linked together, giving users instant access to donor biographical information and giving history. Fund Tracker can accommodate virtually an unlimited number of donors. Users will be able to maintain pledge information, including payment frequency for standard and non-standard schedules, track outstanding pledges and print pledge reminders. The built-in tickler file will alert users at start-up of any reminders they have scheduled for the day. Fund Tracker easily interfaces with word processing applications for personalized mailings and is capable of printing labels. In addition, Fund Tracker tracks Campaigns and Campaign progress while allowing the information to easily be exported to Microsoft Excel for graphing and statistical review. Campaign prospect lists can be generated for phone-a-thons or direct mail. There are numerous reports built into Fund Tracker to generate daily, monthly and annual giving information.

Grady Profile Portfolio Assessment
Portfolio assessment tool
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later; HyperCard 2.0; Apple or Farallon microphone and Thunderware LightningScan 400 scanner recommended.

This innovative software package addresses two new classroom trends: more portfolio-based student assessment and more use of multimedia technology. Grady Profile will record reading, writing and math samples, record test scores, student, family, and health information, and more. With Grady Profile users can: collect, organize and store actual student work; share student's work with counselors, administrators, parents and students to assess individual students' changing skill levels; scan actual samples of students' work and record corresponding assessments; incorporate QuickTime videos; use a special section for student self-assessment; and individualize the profile through the use of five custom sections or renaming sections to meet specific needs. Users can integrate evaluation into their curriculum and turn assessment into a proactive agent for learning with Grady Profile.

Graphical Analysis (Macintosh Version)
Plots well-labeled graphs of experimental data
Macintosh Plus or larger; System 6.0 or later.

Graphical Analysis is designed for use in high school and college science classes. It plots well-labeled graphs of experimental data entered by students, following accepted scientific graphing conventions. After data is entered, modified versions of the graph (e.g., with the x-axis data squared before plotting) may be quickly drawn to help in the search for the relationship between the variables. Semi-log and log-log graphs can be made. The linear regression "best fit" line can be included on the graph. Data files collected using Vernier Software's data acquisition programs for the Apple II or IBM can be imported (after the use of Apple File Exchange) and then graphed.

HyperLingua
Basic skills; ESL HyperCard authoring program
Macintosh Plus or larger; 1 MB of RAM; external disk drive (hard disk drive for teacher's stacks); HyperCard 1.2 or later.

HyperLingua is an interactive program composed of a set of linked HyperCard stacks, aimed at adult literacy, ESL and basic skills markets. It allows teachers to create on-screen or printed language drills in a variety of formats — multiple choice, matching and sentence jumbles. The exercises help develop facilities at sentence-level usage and provide practice and reinforcement of recently studied materials across the curriculum. HyperLingua's icons graphically portray operations to aid low-reading-level users. For further support, users may access online notes, hints and tutorials at any time. HyperLingua has a utility stack for detailed record keeping and operation instructions.

IconAuthor's Presentation System For The Macintosh
Enables multimedia applications created with IconAuthor to run on a Macintosh
Macintosh LC II or larger; 4 MB of RAM; 80 MB hard disk drive; color monitor; System 7.0 or later.

IconAuthor's Presentation System for the Macintosh enables multimedia applications created with IconAuthor in either the Microsoft Windows or OSF/Motif environment to run on a Macintosh. IconAuthor's Presentation System provides users who are developing commercial titles the ability to develop for multiple platforms simultaneously. It affords those supporting end users in a heterogeneous computing environment the ability to deliver on any installed platform. IconAuthor allows professional multimedia developers to create advanced, interactive applications combining text, graphics, animation, audio and full-motion digital and analog video. Its icon-based, visual programming environment allows non-programmers to create applications and titles for computer-based training and learning, performance support systems, simulations, self-service terminals and interactive product presentations.

Instructor's ToolBox 1.3
Educational tools
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; HyperCard 2.0 or later; System 6.0.7 or later.

Instructor's ToolBox, which consists of the Performance Measurement and Presentation Management modules, are educator tools for exam generation and classroom presentation. By simple pointing and clicking, Performance Measurement allows users to choose what questions they want and installs them into an exam. Features include: eight question types, ease of mixing graphics and text, easily editable, add user-generated questions and graphics, modify any existing questions and graphics and is simple to use. Performance Measurement includes a custom printing feature that allows users to print exams from within HyperCard. The Presentation Management module is designed for use during lectures and presentations, and as a source of graphics for exams. Users can also add their own graphics or modify any existing ones in the modules. Features include: templates for customizing lecture stacks, graphics for exam without resizing or scaling, current time display either on or off, remember last graphic shown and simple to use.

J&S Software Educational Programs, Inc.; 14 Maple St.; Port Washington, NY 11050; 516-767-0393, 800-767-8696 or 516-767-3804 (fax)

LanguageWriter
Allows instructors to combine the written and spoken word
Macintosh Plus or larger; System 6.0.7 or later.

LanguageWriter is a multimedia program that combines the written and spoken word. Users can hear, as well as see the principle parts of text that is supplied by the instructor and can respond with sound or text. LanguageWriter has been designed to offer a variety of teaching and learning styles in language classes using a combination of sound and text. Pedagogically the program provides teachers with a generic, flexible software tool for preparing content materials of their choice in both media. In LanguageWriter, instructors can record their own sound files, relate pieces of the sound to written text and save the results in a lesson format. The ability of the teacher to include recorded conversational materials along with the written version of texts makes LanguageWriter useful for students of foreign languages and English as a second language, as well as for bilingual and dialect-disadvantaged learners.

Learner Profile
Observational assessment tool; grades K to 8
Macintosh Plus or larger; 4 MB of RAM (5 MB recommended); hard disk drive; System 7.0 or later (System 7.1 recommended).

Now teachers and their students can chart their progress easily and effectively. With this unique assessment tool, teachers can plan, organize and review observations about students' progress and the products they produce. Learner Profile combines the Macintosh computer, the Apple Newton and bar-code reader to make observational assessment a practical tool for the classroom. Using observations to assess progress is an on-going challenge that occurs at every level. Recording and retrieving those observations in a reliable manner is often difficult. Learner Profile answers the challenge by recording and filing observations in an organized database. By using a portable bar-code reader, teachers can instantly record what they see happening in their classroom. Information is automatically loaded into a computer database under each student's name. Later, the information can be printed, analyzed and conveniently utilized to aid in assessment. When it is time for parent conferences, teachers will have records to back up their comments. When the principal wants to know how someone is doing, teachers will have the information at their fingertips. Most importantly, teachers can plan tomorrow's activities by reviewing the accomplishments of today. And at year's end, teachers will have accurate records and thorough reports to pass on with the learner.

The Learning Processor For Macintosh
Allows users to create interactive, multimedia training courses
Macintosh LC or larger; 4 MB of RAM (8 MB recommended for development); video capture board and software required for video development; System 7.0 or later.

The Learning Processor is an interactive, multimedia development and delivery system for computer-based training (CAI authoring tool). The software allows anyone to quickly and easily create learning and training on most subjects. No authoring or programming is required. Developing curriculum is as simple as typing in the material to be learned. Users can also include sound, graphics, animation and full-motion video. Video clips can be used in the training and learning process. The Learning Processor creates its own presentation screens, automatically develops questions (multiple choice, fill in the blank and inductive reasoning), tracks right and wrong responses and automatically adjusts the curriculum to each student's immediate learning needs. The Learning Processor automatically records scores that can be printed or exported to a spreadsheet. It even prints hard-copy exams.

Live Writer
Real-time monitoring and editing
Networked Macintoshes.

Live Writer allows instructors, as server administrators, to monitor student papers in progress, rather than grade as products. It gives instructors the capability to log on to a student's computer for live interactive editing by means of a message window. Instructors can "freeze" a work in progress and write comments that appear simultaneously on a student's screen. Students can reply, establishing a "real-time" instructional dialog. Teachers actually edit the student text if necessary.

LXR•Test 5.0
Complete testing system, including test generation, scoring and analysis
Macintosh Plus or larger.

LXR•Test is an integrated family of testing software that includes comprehensive question banking and test generation capabilities with optional automatic test scoring and item analysis features. All types of questions may be entered with full text stylizing, graphics placement and QuickTime movies. Questions are primarily classified by an objective and may be additionally classified by type, difficulty, topic or other. Tests may be rapidly constructed by specifying the number of questions to be randomly chosen from those that meet a user's selection criteria. Tests may be reprinted with detailed solutions and references following each questions. LXR•Test is available in three "editions": Personal, Professional and Scoring. Any edition may be ordered under single or multiuser (site) licensing terms. All editions support full character styling (tabular alignment, super/subscripting, etc.), precision graphics placement (even over text), unlimited bank size, multiple headers/footers, page break controls, variable item weighting, computed administration times, student response forms, instant question rearrangement, both alternative and question scrambling, question import/export and more. Additional features are available, depending on which edition is ordered: multicolumn page layout, student mastery requirements definition and reporting, linking of question groups, automatic scoring, item analysis and more. Optional "add-on" modules provide for interactive testing and spell checking.

Mac I.E.P. Generator
Generates special education students' Individualized Education Plans
Macintosh Plus or larger; Microsoft Word 4.0 or 5.0.

Mac I.E.P. Generator is a customized Word 4.0 glossary that generates special education students' Individualized Education Plans. It contains more than 1,000 educational goals and objectives in the following areas: reading, mathematics, writing, social/emotional, vocational, speech, language, gross motor, fine motor and adaptive behavior. Each annual goal and objective is coded in the glossary for quick access. There is an unlimited capacity to create additional goals and objectives and to add them to the glossary. Mac I.E.P. Generator includes several different templates for the Basic Plan, which speeds up the process of generating the Individualized Education Plan.

Mac School V3.2
Student information system for school administration
Macintosh SE/30 or II family (dependent on school size and number of nodes on the network).

Mac School is a single or multiuser school and district administration system for public and private schools. Modules are available individually or as an integrated solution: Student Demographics, Scheduling, Attendance, Marks, Report Cards and Transcripts, Library Cataloging and Circulation, Health and Immunization, Guidance, Fund Accounting and District Module. Data is entered only once and is then available to all Mac School Modules. All data is protected by a multilevel password system. Optical scanners can read in students' attendance, grades and course requests. An import/export utility allows data to be transferred to/from other mini, mainframe or micro platforms. Immediate and easy access to all of a student's demographic, scheduling, report card and attendance data is provided by the Query module. Flexible reporting is an important feature of the Mac School system. In addition to the wide variety of built-in reports, the report generator allows users to control form and content of school-designed reports, including report cards, student transcripts, disciplinary reports, honor rolls, attendance summaries, library reports, letters and mailing labels. All reports can be sent to the screen or printer.

The Mac School Teacher Workstation on the teacher's desk creates truly school-wide administration. It integrates and automates teachers' administrative tasks, including grade calculations and reporting, anecdotal observations of student progress, curriculum planning, seating plans, attendance and much more.

CSL Profiles In Hand uses revolutionary Apple Newton MessagePad technology to extend the teacher desktop. Using a pen-based computer, teachers record observations of student progress immediately, wherever they are working with students: the classroom, the library, the playing field and on field trips.

The District Module compiles individual schools' data at the district level, allowing comprehensive analysis and flexible reporting.
$3,600 retail; single user
$4,700 retail; multiuser (modules can be purchased separately; district site licenses available)
$3,000 to $15,000 retail; District Student Management (price depends on number of schools in district tied to the system)
Chancery Software, Ltd.; 4170 Still Creek Dr., Ste. 450; Burnaby, BC, Canada V5C 6C6; 604-294-1233, 800-999-9931 (orders) or 604-294-2225 (fax)

MacCare
Administrative system for child care centers and preschools
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; printer.

MacCare is a complete administrative system for the management of child care centers and preschools. The system is designed to be used by directors and administrators with no previous computer experience. The system's Base Module provides complete information management, including child and family data, such as immunizations, emergency contacts, authorized pick ups, scheduling and custody information. The system offers more than 70 standard reports to meet the wide range of information needs of centers. Accounts Receivable functionality includes auto-posting of contracted tuitions, printing of statements and receipts, a maintenance of ledger cards with complete payment and charge history.

MacLang 4.5
Multilanguage authoring environment
Macintosh Plus or larger; System 4.2; Finder 6.0.

MacLang is a computer-assisted language learning authoring program. It is a versatile environment that allows language teachers to prepare interactive lessons specifically tailored to their courses and the needs of their students. MacLang supports the development of language tutorials for English alone, or in combination with French, Spanish, Italian, German, Greek, Russian (Soviet or phonetic keyboards), Turkish, Romanian, Portuguese and Japanese. Each lesson may have up to five formats, including vocabulary drills, fill-in-the-blank exercises, multiple-choice questions, paragraphs (each may have questions supporting up to 19 blanks), and jumbles (scrambled sentences in which students rearrange up to 15 words to create a logical sentence). MacLang contains a videodisc interface. It allows multiformat exercises, branching and the possibility of creating story trees.
$129 retail; single user
$349 retail; per academic laboratory
RDA Mind Builders; 35 Crooked Hill Rd., Ste. 200; Commack, NY 11725; 516-499-0053, 800-654-8715 or 516-499-0389 (fax)

MacLang V4.5
Flexible authoring system
Macintosh 512K or larger; 800K disk drive.

MacLang is a flexible authoring system that allows teachers to easily create computer lessons. It can be used with English, French, Spanish, Italian, German, Greek, Russian, Portuguese and Japanese; the different exercise formats include vocabulary equivalency drills, fill in the blanks, multiple choice questions, reading comprehension, scrambled sentences and cloze (exercises). Courseware prepared with MacLang offers immediate feedback, error correction, individual learning experience and positive reinforcement. The 800K edition includes conditional branching exercises, character set for Pinyin Chinese and the capability to interface with a videodisc player.

MacLunchroom V6.12
School hot lunch record-keeping program
Macintosh Plus or larger; 2 MB of RAM recommended; 20 MB hard disk drive; ImageWriter.

MacLunchroom is designed to fully automate a school's hot lunchroom program. The system prints bar codes for each student and uses these bar codes as lunch cards. The program can automatically assign ID numbers for each student, or they can be manually assigned. The bar code contains only the ID number, therefore free/reduced lunch information is kept confidential. Parent letters are printed whenever a parent's balance reaches an amount designated by a user. These letters contain the home room number of a student for easier delivery. Numerous reports are available to provide all information required for federal and state reporting, as well as the reverification selection procedure to re-qualify free/reduced parents. New features in version 6.0 include: unlimited number of lunch types, milk types and breakfast types; allows use of social security number for student ID; auto payment in line where applicable; and numerous additional reports for breakdown of free/reduced lunches by room, grade, etc. The program is System 7 compatible.
$795 retail; single school

MacMarks
Marks management program
Macintosh Plus or larger.

MacMarks is a free-standing marks management program that provides teachers with a tool to record marks, calculate grades and provide customized individual and classroom reports. For schools with optical character readers, MacMark has the unique capability to interface with the Discus Data CR-510, Chatsworth OMR-1000 and OMR-2000 to produce machine scored grades with on-screen editing and an item analysis for multiple choice tests. Features include: single or multiple window operation; full control over assignment and window weightings; raw scores or percents; file import function, so that class lists need only by typed once; a teacher comment selection file that can be easily customized; and teacher-controlled options and reporting flexibility to produce excellent individual student report cards, class summary reports, detailed class reports, blank marksheets and activity titles.

MacMotion
Allows students to study motion and force
Macintosh Plus or larger; System 6.0 or later.

MacMotion allows students to study motion and force with Macintosh computers. It allows up to four graphs to be plotted in real time as the sensors are being read: distance, velocity, acceleration and force. Numerical results can also be displayed, saved or transferred to another application. MacMotion can draw a best-fit line on any of the graphs. The Ultrasonic Motion Detector and Force Probe connect to the Universal Lab Interface, which interprets the data and relays it to the Macintosh via the modem port. Universal Lab Interface, Motion Detector and Force Probe are sold separately.
$25 retail; includes site license
Vernier Software; 2920 SW 89th Ave.; Portland, OR 97225; 503-297-5317 or 503-297-1760 (fax)

MacSys Qaujisaut System
School board site management system
Server requires Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive. Client requires Macintosh Plus or larger.

The MacSys Qaujisaut system is a 4th Dimension-based client/server site management and financial reporting tool that features extreme ease of use. This system is specifically tailored for the needs of schools (clients) and Board offices (server). The Qaujisaut system is intended to operate in tandem with established accounting systems, enhancing their use, producing supplemental reports and providing operating features not available with conventional systems. Qaujisaut greatly simplifies all administration and school accounting procedures. The Qaujisaut system consists of seven integrated modules. These are the Fund Maintenance, Purchase Order, Time Sheet, Leave Form, Local Funds, Asset and Setup modules. One key feature of the system is that system-level controls can be defined centrally to help regulate site operations. Data transfer between the schools and the Board office (server) can be initiated manually or on a predefined schedule. The system has multilingual capabilities. Customization is available as required.
$28,500 U.S. retail; 10-site system
MacSys Inc.; 362 Terry Fox Dr., Ste. 200; Kanata, Ontario, Canada K2K 2P5; 613-591-9200 or 613-591-8089 (fax)

MacTemp
Enables the Macintosh to measure temperatures
Macintosh Plus or larger; System 6.0 or later.

MacTemp enables the Macintosh to measure temperatures. Graphs of temperature vs. time are made as the experiment proceeds. The data collected can be displayed numerically, saved or transferred to another application. Two temperature probes can be used. The readings may be taken over short periods of time or spread out over many days. The temperature probes connect to the Universal Lab Interface, which interprets the data and relays it to the Macintosh via the modem port. Universal Lab Interface and temperature probes are sold separately.
$25 retail; includes site license

MacWISC-R
Assists in analyzing the Wechsler Intelligence Scale for Children-Revised
Macintosh Plus or larger; Microsoft Excel 1.5 or later.

MacWISC-R assists school psychologists in analyzing and generating hypotheses about a student's performance on the Wechsler Intelligence Scale for Children-Revised. The program automatically computes the underlying constructs and the student's age and analyzes the subtests. Once the scaled scores are entered, the program will automatically look up the student's Verbal IQ score, Performance IQ score and Full Scale IQ score, as well as provide the psychologist with percentile ranks and classifications for the individual subtest and Scale scores. The program also allows users to automatically graph the student's scores using custom pull-down menus. A custom help system is included.

MakeTest
Test-generation program
Macintosh Plus or larger; 1 MB of RAM; two 800K disk drives or hard disk drive; System 6.0:2 or later.

MakeTest is a test-generation program that conforms to and takes full advantage of standard Macintosh user interface features. Users can enter multiple-choice, true-false, fill-in and free-form questions; add, delete and edit questions; choose font, size, bold, italic, underlining, subscript or superscript formatting; specify the number of lines to be left blank after the question is printed; rank each question's difficulty level; create and assign a topic to each question; write and store notes about each question; paste in graphics and equations from the Clipboard; use a browser to select previously entered questions for viewing or editing; and more.
$149 retail; education discounts and site licenses available
Mountain Lake Software, Inc.; 298 4th Ave., #401; San Francisco, CA 94118; 415-752-6515, 800-669-6574 or 415-752-6506 (fax)

MediaText
Create multimedia documents; grades 7 to 12
Macintosh SE or larger; 2 MB of RAM (4 MB if using QuickTime or System 7.0).

MediaText is a revolutionary tool that lets teachers and students easily create multimedia documents. This enhanced word processor allows users to link to a variety of other media: video clips, QuickTime movies, graphics, sound clips, animation and more. MediaText is simple and intuitive — nothing in it takes more than a few steps to achieve — but it produces amazingly sophisticated results.
$99 retail; site license available
Sunburst/Wings for Learning; 101 Castleton St.; Pleasantville, NY 10570; 914-747-3310, 800-321-7511 or 914-747-4109 (fax)

MicroGrade 3.0
Grade keeping program
Macintosh Plus or larger; printer recommended.

MicroGrade is a full-featured grade keeping program that is flexible enough to accommodate teacher's individual grading systems regardless of subject or grade level. Features include: add, change or edit assignments, rosters and/or grading standards any time; average grades from multiple grading periods for final grade; grade by weighted percent or total points; define personalize grade cut-offs and grading scales; enter raw scores or letter grades; record make-up, extra credit and changed scores; drop low scores; mark assignments late, incomplete or excused; and curve assignments and use rounding. Reports include: customized progress reports, final and assignment grades, rosters, missing assignments, worksheets and statistics. Each class can contain a maximum of 400 students with 120 individual assignments. It includes a new attendance module.

MicroTest III
Test generator
Macintosh Plus or larger; printer recommended.

With MicroTest III, educators and trainers can develop question banks and create printed exams. Question banks are clearly organized and support multiple choice, matching, true/false and "free form" questions. Users can enter questions directly or import them from text files. Questions can be added, edited or deleted at any time. Unlimited question length includes graphics, multiple fonts, styles, etc. The database can contain up to 35,000 questions per bank. Creating exams is as easy as selecting questions and entering instructions. Questions can be selected as they are viewed on screen or Auto Selection will randomly select questions based on a user's criteria, including question type, key word and difficulty level. MicroTest will not split questions between pages and prints answer keys for each test version. Tests can be exported to ASCII.

MMS (Modular Management System For Schools)
School administration system
Macintosh Plus or larger.

The Modular Management System for Schools (MMS) is a school administration software system designed to handle all student record keeping and course scheduling needs. The MMS is a totally integrated modular system built around a central Student Master File. Additional modules handle Student Scheduling, Grade, Attendance and Discipline reporting, as well as Tuition/Fee Accounting. The MMS:Student Master File System must be present before any of the other modules can be used.

The MMS:Student Master File System allows users to record student biographical information and sort/display this information in an unlimited number of ways. The MMS:Attendance Reporting System allows users to record daily and/or period/class attendance information and print an extensive set of reports, including daily attendance bulletins, registers and statistical reports in a format acceptable by the State Department of Education. The MMS:Student Scheduling System allows users to generate a working course master schedule using the Master Schedule Builder and optimally schedule students using the highly efficient Omega Loader. A complete set of final reports is also available, including class lists and student, teacher and room schedules. The MMS:Grade Reporting System allows users to record letter/numeric grades, comments and credit data, and print an extensive set of reports, including report cards, transcripts, honor roll and class rank lists. The MMS:Tuition/Fee Accounting System allows users to record student fees/payments, and generate statements and aged account reports. The MMS:Discipline Reporting System maintains a record of each student's behavior for the entire school year.

Multiple Choice
Test generation software
Macintosh Plus or larger; HyperCard 2.0 or later.

Multiple Choice is HyperCard-based software that permits the creation of stand-alone examinations. These exams may be used by students as self-tests or as actual exams, as each exam stores the grade obtained by each student. Each test may be designed using any combination of three standardized question formats: true/false, multiple choice or K-type. Tests may also

include any desired degree of feedback, including explanations regarding each question.

PEAK — Personal Educational Authoring Kit
Teacher-centered multimedia authoring tool
Macintosh II or larger; 4 MB of RAM; HyperCard 2.1 or greater; 8-bit color graphics card; 12- or 13-inch color monitor; hard disk drive.

PEAK (Personal Educational Authoring Kit), a teacher-centered multimedia authoring tool, is designed to create customized, interactive lessons and presentations. PEAK is literally a field trip, microscope and filmstrip all rolled into one. A user becomes the "tour guide," encouraging students to learn and explore. This HyperCard-based authoring system supports high-resolution color images, text, narration and sound effects. PEAK software also takes advantage of the latest multimedia tools, including full-motion video and animation. Training for PEAK software is offered as part of the site license. Based on a unique "train the trainer" concept, training is designed to encourage the sharing of courseware.
$1,495 retail; includes eight hours of training

Digital Imaging Associates, Inc.; An Affiliate of Major Educational Resources Corp.; 10153 York Rd., Ste. 107; Hunt Valley, MD 21030; 410-628-9200, 800-989-5353 or 410-628-0915 (fax)

PlayMaker II
Drawing tool for coaches to create play books
Macintosh Plus or larger; System 4.1 or later.

PlayMaker II is a specialized drawing tool used by football, basketball, hockey and soccer coaches to create play books. It includes unique features that enable a coach to draw plays faster than with generalized drawing programs. These features include several predefined symbols for players and multi-segment line tools where any line segment can be an arc. Lines can be plain or dashed and end with an arrowhead or blocking symbol. Football or soccer fields and basketball or hockey courts are drawn to scale automatically. Instructions for players can be added to a drawing with the usual Macintosh fonts, sizes and styles. A coach can create formations to speed drawing of similar plays. QuickTime movies can be attached to a play book page. PlayMaker II can also flip and reverse plays about the center to quickly create left and right versions of a play. A diskette-based demonstration movie of PlayMaker II is available on request.

B.W. Software; PO Box 15163; Ann Arbor, MI 48106; 313-769-8587

PowerGrade
Gradebook solution
Macintosh Plus or larger; 1 MB of RAM.

PowerGrade offers easy recording and very flexible reporting of scores. Features include: full on-screen previewing of all reports, completely user-definable gradescale, ability to record letter grades as well as numerical scores, drop scores function, use of grading periods for reporting, user-definable comments in reports that can use "wildcards" to personalize reports, full attendance keeping capability and much more. Scores can be recorded using a gradebook spreadsheet or by student record. Final grades for students and assignment averages are always automatically kept up to date. Any class information — student names, scores, assignments, categories, weighting, preferences, etc. — can be easily modified at any time throughout the school year. PowerGrade handles classes up to 1,000 students and 128 assignments. It is System 7 compatible and is backed by a 30-day unconditional money-back guarantee.

QuizMaker
Authoring software
Macintosh II or larger; 2 MB of RAM; System 6.0 or later.

QuizMaker authoring software transforms flash cards, multiple choice exams and fill-in-the-blank exams into Macintosh applications. No programming or scripting is necessary and it is easy for both students and instructors to use. User quizzes created using QuizMaker provide recognition for "new high scores," explanations for answers not understood, searches of quiz questions, random or sequential questions and emphasis on questions missed most frequently. QuizMaker authors can configure quizzes with each of these features turned on or off. Each quiz is self-marking and can be distributed without worrying about copyright restrictions (only user quizzes may be distributed without restriction). User quizzes are stand-alone applications that do not require the purchase of QuizMaker authoring software to run.

■ **Scholastic's Electronic Portfolio**
Assists teachers in the design and management of performance-based portfolios
Macintosh LC or larger; 4 MB of RAM; 40 MB hard disk drive; 640 by 480 by 256 colors monitor; System 7.0 or later; CD-ROM drive.

The thinking behind how users deliver and assess learning is being changed by educational reform and the integration of technology into the classroom. Scholastic's Electronic Portfolio is a multimedia productivity tool that assists teachers in both the design and management of performance-based portfolios over time. Electronic Portfolio provides schools with an easy-to-use organizational system for the creation, management and presentation of electronic multimedia student portfolios. The program enables students to build portfolios using scanned images, sounds, full-motion video, graphics and textual data. Electronic Portfolio is flexible enough to build portfolios spanning the K-12 grade levels that can be linked to any assessment methods users may want to use.

School Lunch Mac
Point-of-sale lunch accounting system
Macintosh Plus or larger; hard disk drive recommended.

School Lunch Mac is a fully automated point-of-sale lunch accounting system. This program keeps schools in compliance with federal regulations prohibiting overt identification of free and reduced qualifying students while accurately accounting for all lunch moneys. Breakfast and lunch can be handled independently. A la carte items can be sold in addition to a standard meal or extra milk. SLM will notify the operator when a card has been accessed more than once in the same day. Warning messages will notify the operator when the student is out of money or within a user-defined limit. The program prints all reports, bar codes, monthly summaries and acuclaim information. A district accounting disk is available for combining information from schools in the same district for a comprehensive report.
$595 retail; single school (district pricing available)
$399 retail; optional bar-code scanners
Free demo disk and brochure are available

School Scheduler
Creates master schedules
Macintosh Plus or larger; System 4.1 or later.

School Scheduler can help high school administrators create a better master schedule without waiting for their mainframe. Administrators create a master schedule for students, courses, classes and limited resources (teachers and rooms) with the friendly Macintosh user interface. School Scheduler's school year consists of many periods per day and one or more terms per year. An administrator can add classes to the master schedule, assign teachers and rooms, and School Scheduler will schedule students' course requests accordingly. Analysis functions include course request totals, teacher and room utilization and "New Class Info." "New Class Info" determines which period to add a new class in and satisfy the most course requests while using available teachers and rooms (instead of using a conflict matrix). School Scheduler can also create classes using course request totals and "New Class Info." Several reports are generated as tabbed text files. An option for student grades is also available.

SchoolWorks
School application templates
Macintosh Plus or larger; Microsoft Works.

SchoolWorks has spreadsheet, database and word processing files for keeping gradebooks, taking book inventories, recording book reports, writing tests, printing progress or deficiency reports, forecasting department expenditures and many other applications. For the school administrator, there are files that record messages and phone use, keep track of attendance, organize evaluations, print out teacher information, register classroom use, re-work daily schedules, perform bookkeeping chores and store student data. Pre-programmed application templates include: Athletic Director, Teacher, Office, Media Center, Letter Files and Department Head.
$170 retail; includes Athletic Director, Teacher and Office
$75 each retail; Athletic Director, Teacher, Office, Media Center, Letter Files, Department Head
All include free site license

SIMS V2.1
Student information management system
Macintosh LC 575 or larger; 4 MB of RAM; hard disk drive; printer.

SIMS, Student Information Management System, is a complete information system designed for managing student information and to assist schools in making wise decisions. SIMS provides a system for managing the master schedule, student data, grades, attendance and discipline incident records. SIMS allows scheduling of students as individuals or groups while maintaining even class loads. It is multiterm, allowing schools to do future course planning for students into future terms. There are many flexible reports, including: multiple formats for report cards, analysis of course requests, student credits and goals, summary and statistical reporting of attendance, grades, enrollment and student body profiles and more. There are multiple security levels.
$1,799 retail; single user
$2,799 retail; multiuser (one to three users)
$3,299 retail; multiuser (four to 10 users)
$4,299 retail; multiuser (11 to 64 users)
(includes six months telephone support and software updates)
$99 per person retail; on-site training (minimum $300 per day plus travel and lodging expenses)
$30 retail; demo

Sound
Allows users to study sound
Macintosh Plus or larger; System 6.0 or later.

Sound allows users to study sound with the Macintosh. It displays sound waveforms and makes a number of interesting labs and demonstrations possible, including: the differences between the waveforms of various musical instruments, voice prints, beats, harmonics and overtones. It even does a Fourier analysis of the sound. A Microphone/Amplifier connects to the Universal Lab Interface, which interprets the data and relays it to the Macintosh via the modem port. Universal Lab Interface and Microphone/Amplifier are sold separately.
$25 retail; includes site license

Stella II 3.0 And Stella II Authoring Version
Model building and simulation package
Macintosh Plus or larger; 42 MB of RAM; hard disk drive; System 6.0.4 or later.

Stella II is a powerful and flexible package for building and simulating models of dynamic systems and processes. Using a simple set of building block icons, users can construct a map of a process and how it works. The diagram automatically generates equations, used for simulation, allowing users to bring the map "to life." Output can be viewed as graphs, tables, diagram animation or QuickTime movies. Multirun sensitivity analyses allow users to perform a variety of what-if analyses as they (or students) explore the interdependencies of the system under scrutiny.

The Authoring Version of Stella II allows users to create full-fledged multimedia Learning Environments with which users can interact without needing to be familiar with underlying model detail. Whether used by students or professors, in the classroom or in research, Stella II and the Stella II Authoring Version are ideal tools for building an understanding of dynamic systems. Stella II supports QuickTime, as well as Publish & Subscribe.

■ **Student Performance Support (SPS)**
Curriculum management
Macintosh Plus or larger; CD-ROM; System 7.0 or later.

Student Performance Support (SPS) is a robust, full-featured "computer management of instruction" (CMI) system that manages student rostering, curriculum assembly, sequencing of instructional events, student routing, testing, data collection and analysis, grade reporting, general messaging and access to other resources for education or training applications. With five fully integrated desktops, SPS is the gateway into the world of learning. There is no longer a need to be locked into existing or prepackaged courses. Content independent, SPS works with almost any courseware or authoring environment. Each organization can customize the learning events to meet its own specific goals. SPS is flexible and easy to use, gives new life to existing course content and makes designing new courses fast and fun.

Teacher's Rollbook 2.6
Complete classroom management tool
Macintosh 512K or larger; hard disk drive.

Teacher's Rollbook is a full-featured roll-book program that allows teachers to record and calculate grades and more. The program keeps accurate totals and the reasons for all absences and tardies; keeps detailed accurate records of a student's grades and provides 20 different reports quickly and easily; and keeps track of actions a user takes regarding behavior, reminds a user what was assigned and keeps accurate records for later use. Teacher's Rollbook provides a semester rollover feature that allows a user to transfer the students basic information into a new file for a new semester without having to enter that information again. Teacher's Rollbook is System 7 compatible.

Teaching, Learning And Technology: A Planning Guide
Planning resources to support schools and districts in the integration of technology in the classroom
Macintosh LC or larger; 2 MB of RAM (4 MB for QuickTime version); hard disk drive with 7 MB of free disk space; HyperCard 2.1 or later; color or gray-scale monitor; System 6.0.5 or later; VHS videotape player; videodisc player; CD-ROM drive.

With the Basic Kit, users will find the Teaching, Learning and Technology Workbook, the program's centerpiece. It's a virtual storehouse of information, technology references and case studies about the planning process. In addition, users will find actual classroom examples that showcase successful uses of various kinds of technology. Plan template disks and duplication masters help users develop, record and publish a plan as it progresses. Learning Video illustrates successful technology integration.

The Interactive Kit is used as users research and collect text, audio and video information throughout the planning process. Aided by the Interactive Planbook, users can guide a school's vision, goals, objectives, budgets and schedules. The Presentation Maker can then be used to create a true multimedia presentation combining text, audio clips and video. It includes all the components of the Basic Kit and a Quick Start to help users put the equipment together. A dynamic videodisc with 60 minutes of video clips from a variety of classroom learning environments and a CD-ROM disc with two hours of audio interviews and the necessary software are included.

The Interactive Kit/QuickTime Version lets users run the program directly from the CD-ROM without any additional hardware. It includes an improved version of the Interactive Planbook, along with templates and duplication masters. A single CD-ROM disc contains the software and QuickTime versions of two hours of audio interviews and an hour of video clips of teachers and students using technology.

Test-It with Audio
System to create differentiated assessment tests
Macintosh Plus or larger;

Test-It offers teachers a system to create differentiated assessment tests for any subject. Whether for catching up, revision, consolidation or extension work, the program enables students to work at their own pace and set their own targets. The program provides records of achievement, password security and the flexibility to create a wide variety of tests thanks to test manipulation options, the NotePad and WorkSheet features (including text import and export). Groups of tests can be archived for security or convenience, and whole class lists imported from databases. The number of tests and students listed is unlimited, and even a floppy disk can store a substantial databank if security is an issue.

Textbook Librarian
Textbook management
Macintosh Plus or larger; hard disk drive.

Textbook Librarian provides complete textbook management, inventory management and circulation. It offers features such as: overdue listings by class, teacher, student or period, pre-defined fines for book damage, automatic receipts printed at check out, real-time available inventory, flexible loan periods, easy check-in and import/export. It also offers many convenience features; optional bar-code commands for rapid entry, textbook utilization reports, portable bar-code reader support and much more.

Textbook Librarian site license includes all of the above capabilities, plus multiuser support for up to 20 simultaneous users and AppleShare-compatible file server software.

The Textbook Toolbox
Authoring tool
Macintosh Classic or larger; 2 MB of RAM (4 MB with System 7); HyperCard 2.1 or later; System 6.0.5 or later.

The Textbook Toolbox is a HyperCard-based authoring system for creating interactive, multimedia

HyperCard stacks. Users make selections about the various elements of their stack — design, functionality, features — and The Textbook Toolbox builds a fully-functioning "shell" based on the choices made. A built-in suite of authoring tools is then used to add content material, such as text, pictures, sounds and QuickTime movies, to the stack. Stacks created with the system include powerful searching, indexing, navigation, printing and exporting tools. Users can work through the material in their own way, accessing the multimedia references (sounds, illustrations, movies, etc.) included by the author. The Textbook Toolbox makes it possible for novice computer users to create professional-looking HyperCard stacks with the standard Macintosh look and feel. Users will appreciate the intuitive nature of the system, the straightforward documentation and the online help available. Purchase of the system includes the right to produce an unlimited number of stacks without paying royalty or licensing fees.

Tom
Information retrieval system for school libraries
Macintosh Plus or larger (LC recommended); 1 MB of RAM (2 MB recommended); printer; System 6.0.5 or later; CD-ROM drive(s).

Tom is a family of CD-ROM databases designed exclusively for secondary school libraries that provides index and full text access to magazines. Tom is also the first-and-only set of reference products that run on Macintosh computers. The Tom family consists of the following: Tom General, an index to more than 150 general interest magazines and the full text for 100 of the titles; SuperTom, consists of everything in Tom General plus the full text of reference books and newspaper articles; Tom Health & Science, an index to more than 50 key health and science magazines with full text for 24 of the titles; and Tom Junior, available for junior/middle schools only, an index to more than 55 magazines with full text for 26 of the titles; and SuperTom Junior, consists of everything in Tom Junior plus the full text of reference books and newspaper articles. .

Trig'n'Cogo
Assists users in dealing with plane trigonometry and coordinate geometry
Macintosh SE/30 or larger; 3 MB of RAM (4 MB with System 7); System 6.0 or later.

Trig'n'Cogo is designed to assist educators, surveyors, engineers, realty personnel, title offices and government offices dealing with land. In addition to many coordinate geometry routines, the software may be used to demonstrate plane trigonometry using bearings, angles and distances to create figures, solve unknowns and determine area. The software plots the figures or parcels on the screen or printer to most common scales. The graphics may be exported as a PICT file to other software. The coordinates may be imported or exported as a text file. Files created by Trig'n'Cogo may be read by Cogomaster III for use by surveyors, etc. Cogomaster III is suggested as an upgrade. The manual is included on the disk as a "read me" file and may be printed.

ULI Timer
Allows users to take measurements of motion
Macintosh Plus or larger; System 6.0 or later.

ULI Timer allows users to take measurements of motion using the Universal Lab Interface and a photogate system. These measurements are displayed graphically on the screen and can be manipulated and saved. Users may use either a homemade photogate system using a Vernier Software Photogate System Parts Kit, or an assembled Photogate System available from PASCO Scientific. ULI Timer is a useful tool for instant analysis of complicated data on one-dimensional motions. Universal Lab Interface and photogate system are sold separately.

Vertical Markets/ Engineering

ADS-MGMStation—Electronics
Symbols for schematics and drawings
Macintosh 512K or larger.

ADS-MGMStation—Electronics is a comprehensive compilation of electronic, electro-mechanical and electrical symbols developed specifically to allow the creation of complex electronic schematics and drawings. There are more than 15 libraries covering all the primary ANSI symbols. They are accessible by mouse to any position on a drawing. The symbols can be altered to any scale, angle or dimension, providing complete flexibility for manipulating all components of a drawing. The symbols are precise representations of the most common analog, digital, solid state, microwave and RF, logic and system templates. The package also includes complete circuits, connectors and bussings, as well as a self-paced learning tutorial.
$195 retail
Compu-Arch; 1954 Cotner Ave.; Los Angeles, CA 90025; 310-312-6632 or 310-444-9577 (fax)

ADS-MGMStation—Mechanical
Mechanical symbols
Macintosh 512K or larger.

ADS-MGMStation—Mechanical is an integrated compilation of mechanical symbols stored in libraries developed specifically for mechanical engineers, plumbing contractors, specialists in HVAC systems and other design professionals. It allows the creation of complex schematics and drawings. There are more than 20 libraries, all to MIL STD and architectural standards. The symbols are precise representations of the most commonly used templates for heating, ventilation, air conditioning, welding, piping, valves, ductwork, gas, electrical, refrigeration systems, plumbing outlets and fixtures. Also included are comprehensive air flow design, heat power-systems equipment and components, instrumentation in flow plants and air-conditioning systems, as well as a self-paced learning tutorial.

AISC Code Check Version 2.0
Steel-member design program
Macintosh 512K or larger.

AISC Code Check is a general-purpose steel-member design-database program that uses the elastic-design method of the American Institute of Steel Construction (AISC 8th edition) to design steel beams, struts, columns and members subjected to combinations of axial loads, shear forces and bending moments (uniaxial or biaxial). The program is supplied with database files that contain a library of standard W, M, S, HP, C, MC, Tees, pipes and tubing-shaped steel cross sections. This library can be updated or appended by a user. A user selects a suitable steel cross section from the library, manually inputs forces, moments and parameters, and then determines whether a member profile meets the provision of structural code or not.

Argus MeshMaker 2.0
General purpose finite difference pre-processor for numerical modeling, including Geographic Information System and an on-screen digitizer
Macintosh with a math coprocessor; 8 MB of RAM; hard disk drive recommended; System 6.0.4 or later.

Argus MeshMaker is designed for and used by engineers and scientists using finite difference numerical models to model ground water flow, petroleum reservoirs, oceanographic, coastal and marine systems, mineral mining and surface flow. The auto grid generator allows for intuitive and easy creation of complex grids. Rows and columns of blocks are editable objects using click and drag techniques. Material properties, boundary and initial conditions, topography, etc., can be digitized on screen or imported from DXF files into information layers. The GIS automatically assigns each block its appropriate value in each of the information layers. Additional capabilities include querying, zooming, intuitive grid density setting, support of bit-map and PICT formats, and export templates allowing export to any numerical model.
$500 retail; free demo available
Argus Interware, Inc.; 11 Merit Ln.; Jericho, NY 11753; 516-931-4725 or 516-942-5040 (fax)

Argus MeshMaker Pro 2.0
General purpose finite element and finite difference pre-processor for numerical modeling, including Geographic Information System and an on-screen digitizer
Macintosh with a math coprocessor; 8 MB of RAM; hard disk drive; System 6.0.4 or later.

Argus MeshMaker Pro is designed for and used by engineers and scientists using finite element and/or finite difference numerical models to model ground water flow, petroleum reservoirs, oceanographic, coastal and marine systems, mineral mining and surface flow. The auto mesh generator and auto grid generator allow for intuitive and easy creation of complex meshes and grids. Elements, nodes and blocks are editable objects using click and drag techniques. Material properties, boundary and initial conditions, topography, etc., can be digitized on screen or imported from DXF files into information layers. The GIS automatically assigns each element, node and block its appropriate value in each of the information layers. Additional capabilities include querying, zooming intuitive mesh and grid density setting, support of bit-map and PICT formats, and export templates allowing export to any numerical model.

Balancing Rotating Machinery
Shows where to add correction weights to properly balance machinery rotors
Macintosh Plus or larger; 1 MB of RAM.

Balancing Rotating Machinery allows users to enter information on the type of machine being balanced, the type of rotor configuration of the machine, the vibration analyzer used and how the vibration and phase angle sensors were set up, selecting the correct trial weight, and the vibration and phase angle data before and after the trial weight runs. Once the data is entered, the program shows where to add the correction weights to properly balance the machinery rotor. All of this information can be stored as a file and recalled for future balancing runs. Each piece of information can be altered, displayed or printed for balancing reports. The program assists users in selecting single or dual plane balancing techniques, allows them to specify whether weight is to be added or removed, calculates combining multiple weights into one single weight, calculates how to "split" a single weight into two separate weights, calculates weight amounts by the weight shape and density, how to change the radius of the weight and shows the current balance quality based on ISO and ANSI standards.

Beam Analysis VI
Application and function library for beam profiling and analysis
Macintosh Quadra; 8 MB of RAM; 40 MB hard disk drive.

Beam Analysis VI is a real-time imaging application for beam diagnostics and characterization, quality control and laser tuning. Images can be loaded from disk or acquired via a digitizer board. The application features live image display using various color palettes to reveal energy levels, auto-marking of the beam centroid, display of the X, Y intensity profiles crossing the beam centroid or any location pointed in the image, statistical analysis and optional plot of Gaussian-fit curves. Beam measurements are also continuously updated and reported in a window. They include beam area, diameter, peak intensity value, integrated intensity and beam wander statistics. The analysis can be limited to regions of interest selected by a user. Other options include cameras, digitizers and function libraries.

Beam Mac
Structural beam analysis and design
Macintosh Plus or larger; floppy disk drive or hard disk drive; ImageWriter or LaserWriter.

Beam Mac analyzes and helps design simple beams. It allows any number of static loads, including node, element, sloped, moments, trapezoidal distributed, etc. (limited only by RAM). A beam can consist of up to four nodes, each of which may be supported or unrestrained. Each element can have its own characteristics. Double-clicking on a node or element will allow a user to change it; multiple nodes or elements may be changed all at once or in a group. Loads can be applied in groups with factors. The analysis is done by the stiffness matrix method. Nineteen-digit precision is used in all calculations. A partial AISC section table, which can be expanded, is included. A main window shows the original and/or deflected shape, loads, etc. A separate window shows elements with loads, tension, shear, moment and deflection. Another window shows any node as a free body with all loads, forces and moments acting on it. Four other windows show input text, output text and section table.
$145 retail

Beam Mac 2
Structural beam analysis and design
Macintosh Plus or larger; floppy disk drive or hard disk drive; ImageWriter or LaserWriter.

Beam Mac 2 analyzes and helps design any continuous or simple beam or column. It allows any number of nodes, supports, elements, static loads, etc. (including node, element, sloped, moments and trapezoidal distributed), and is limited only by RAM. There can typically be up to 200 nodes per MB of RAM. Each node may be supported or unrestrained, rigid or hinged; each element can have its own characteristics. Double-clicking on a node or element allows a user to type in a change, and multiple nodes or elements can be changed in groups. Loads can be applied in groups with factors. Analysis is done by the stiffness matrix method. Nineteen-digit precision is used in all calculations. A partial AISC section table, which can be expanded, is included. A main window shows the original and/or deflected shape, loads, etc. A separate window shows elements with loads, tension, shear, moment and deflection. Another window shows any node as a free body with all loads, forces and moments acting on it. Four other windows show input text, output text and section table.

Beam-Mate
Engineering HyperCard stack
Macintosh Plus or larger; HyperCard 1.2.5 or 2.0 (specify which).

Beam-Mate is a user-friendly, graphical-oriented, technical HyperCard stack that enables design professionals to analyze simple beam structures with various geometries, cross-sectional shapes and loading profiles. Beam-Mate will calculate and plot shear, moment, slope, deflection and stress of beams in bending, shear stress and angular twist of beams in torsion, plus critical buckling load and stress of beams in compression. Beam-Mate will analyze both bolted and welded end connections, determine section properties for common beam shapes and calculate beam vibration natural frequencies. An extensive table of engineering conversion factors, plus material properties, including various types of wood is also provided. Each section has access to online help, which explains how to use the software. The full version stack is not copy protected.

Benchmark
Aircraft performance testing and analysis
Macintosh Plus or larger; System 6.0.2 or later.

Benchmark automates the process of aircraft performance testing analysis and production of performance charts for flight manuals. It includes instrumentation calibration, pitot-static system flight testing and calibration, engine power modeling, propeller efficiency, induction system ram recovery, engine fuel flow, drag polar flight testing and calculation of Cdo and Oswald E, etc. It produces miles-per-gallon performance charts, CAFE 400 charts and other performance charts for the aircraft or engine. It includes numerous calculators for engine power, aircraft speed, propeller efficiency, atmospherics, etc.

C-CASLab+Extend
Modeling and simulation, computer-aided engineering tool set
Macintosh Plus or larger, including PowerPC; System 6.0.7 or later (6 MB of RAM and System 7 are recommended).

C-CASLab+Extend is a modeling and simulation, computer-aided engineering tool set used by analysts, designers and engineers who work with controls systems. C-CASLab is a system of libraries containing 388 classical control blocks, 100 percent compatible with the modeling and simulation application, Extend. C-CASLab blocks are placed on a worksheet by selecting them from a library list, then releasing the mouse. Dialog boxes for each block are designed for easy variables entry. Blocks are connected at desired points with a drawing tool to build full-function, interactive models. A family of plotters is available for on-screen, interactive illustration of simulation run results. Mathematical analyses include: Euler-forward, Euler-reverse and trapezoidal integration or solution by 2-6 ordered, ordinary differential equations, i.e., Adams' Predictor-Corrector, Adams-Bashforth and Runge-Kutta. Analyses may be model-wide or local-block-level.

C30 DevTools
DSP development tools
Macintosh II family; 8 MB of RAM.

The C30 DevTools are an advanced set of digital signal processor programming environment tools that work with the existing Texas Instruments DSP development programs and all existing NuBus modules that use the TMS320C30 DSP. It supports both the NB-DSP2300 from National Instruments and the SmartStore from Perceptics. The programs are actually developed and tested on the target hardware, making it more accurate than simulators and eliminating the need to consider emulation or simulation variations and differences. This also makes C30 DevTools less expensive than emulators because no additional development hardware is needed. The C30 DevTools consist of three parts: the Texas Instruments' TMS320C30 Assembler/Linker; the C program environment; and the C30 Debugger. When integrated together, they provide a powerful development environment. Because C30 DevTools has been developed using ANSI standards, any C program can be used (if programming in C is preferred, a compiler is available). The center of this product is the C30 Debugger. It has been developed as a powerful set of debugging commands for controlling memory and register input and output, target program analysis and executive control over the DSP operations. Additionally, the Debugger's Command Set can be extended or customized because the source code is provided.

Cable-Mate
Engineering HyperCard stack
Macintosh Plus or larger; HyperCard 1.2.5 or 2.0 (specify which).

Cable-Mate is a user-friendly, graphical-oriented, technical HyperCard stack that provides engineering data and analytical capabilities for electrical and electronic design and engineering professionals. It includes sections that describe the nomenclature used to define various Military-Specification cables, the identification of conductors within these cables, the services in which the various cables are used, plus pertinent data, such as size, weight, rated voltage, amperage and minimum bend radius. In addition, a cable comparison chart is provided and information regarding military style connectors, front and back releases, backshells and protective covers. An extensive table of engineering conversion factors is also provided. Cable-Mate contains analysis sections that evaluate electrical elements in series and parallel, basic electrical problems and circuit designs, plus allows users to design both active and passive filters and attenuators. Extensive online help is available to aid users in fully utilizing this engineering stack. The full version stack is not copy protected.

CADSap
Structural design
Macintosh II family.

CADSap is a two-dimensional drawing program particularly suited for building drawings. Many special functions are provided for structural planning, including reinforcement parametric symbols, structural plans drawing using the building grid and more. The most interesting CADSap feature is the automatic plan drawings interpretation to automatically build a finite element model. This goal is achieved by using statistical shape recognition and expert system techniques. IGES format is supported. Optimized for Power Macintosh.

CALMsim
Comprehensive motion and load simulator for catenary anchor-leg mooring systems
Macintosh Plus or larger; hard disk drive recommended.

CALMsim is a comprehensive simulation used for design, evaluation, maintenance and failure analysis of catenary anchor-leg mooring (CALM) systems. These systems comprise a storage vessel attached by means of a hawser or rigid, articulated yoke assembly to a large catenary-moored surface buoy. It provides detailed mooring line and vessel performance data under specifiable water depth and environmental conditions, including characteristic (r.m.s.) and peak system loads in the forecast maximum storm. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions, an optional independent background swell and steady or fluctuating wind and/or current. CALM mooring systems are characterized by extreme nonlinearities at every phase of performance analysis; CALMsim accommodates these nonlinearities at all levels, including system statics, quasi-statics (low-frequency oscillations with typical periods of one to 10 minutes) and dynamics (wave-frequency oscillations with typical periods of four to 30 seconds). Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

SeaSoft Systems; 250 Ribera Dr., Ste. B; Santa Barbara, CA 93111; 805-683-3002 or 805-683-0440 (fax)

Catsim
Comprehensive multidegree-of-freedom static catenary-elastic mooring system evaluator
Macintosh Plus or larger; hard disk drive recommended.

Catsim is a comprehensive static mooring analysis program for multileg catenary mooring systems. The program is used in the design and analysis of complex single-vessel multipoint mooring systems and special applications, including static response characteristics of

most elasto-gravitational lines of importance to the offshore industry (towlines, reinforced coflex-type hoses, etc.). An analytically exact solution to the elasto-gravitational static response of mooring line elements is employed; these exact equations apply to arbitrary degrees of nonlinearity in the tension-elongation characteristics for the mooring line elements, permitting analysis of strongly nonlinear materials, such as nylon and polypropylene. Extensive online default values for weight, strength and elastic properties of steel and synthetic mooring materials are provided to enhance efficiency in preliminary parametric design studies. The program supports submerged buoys, clumped weights and individually specifiable anchor depths. Output capabilities include both individual line characteristics and net restoring forces and moments associated with rotational offsets about any oblique axis or translational offsets in any direction.

Chameleon 3.0
200 million-plus weights and measures conversion
Any Macintosh.

Chameleon is a general-purpose weights and measures conversion program. Version 3.0 can perform more than 200 million conversions in 18 different dimensions, including: distance, mass, time, temperature, energy and work, pressure, force, angle, illumination, area, volume, linear velocity, angular velocity, density, power, flow rate, moment of inertia of area and moment of inertia of volume. Within any dimension, the range of possible conversions generally covers 36 orders of magnitude, ranging in distance, for example, from the tiny attometer (1.0E-18 meters) to the exameter (1.0E+18 meters). Conversion factors are accurate to six significant digits and are displayed in scientific notation, if necessary.

Chemical Mac
Chemical process costing program
Macintosh Plus or larger (SE/30 or II recommended); 2 MB of RAM; hard disk drive.

Mac Chemical calculates the material cost of batches in a chemical manufacturing environment. The Product file contains a record for each raw material and process result. In addition, derivative materials, such as rerun, to be improved and recovered, can be defined with their cost specified as a percentage of the parent product. An ingredient structure is defined for each process, specifying all the possible input and output materials. To cost a batch, users identify the process and a general batch sheet is created from the ingredient file. Users then enter the quantities used and output for each material. The batch sheet is stored permanently and identified by a lot number. An optional inventory module is available to control ingredient usage by lot or batch.

CircuitMaker 4.0
Digital logic design, simulation and schematic generation
Macintosh Plus or larger.

CircuitMaker is a fully integrated schematic capture and digital simulation program. It enables users to quickly draw any electronic circuit and then simulate the digital portion of the circuit. A library of common TTL and miscellaneous devices is provided. Users can expand CircuitMaker by designing additional devices and adding them to the library. Editing features, such as rubberband move of devices and wires, undo and smart wires, make circuit construction easy. Operation of the circuit can be observed via a logic analyzer timing display, by enabling a powerful trace feature that shows the state of every node in the circuit simultaneously as the simulation runs, by connecting a variety of LED displays into the circuit or by using an interactive logic probe.

Co-Geometry Excel Templates
Coordinate geometry
Macintosh Plus or larger; Microsoft Excel.

Co-Geometry is a set of Excel templates that perform five separate coordinate geometry functions. They are designed for use by civil engineers, professional surveyors, land planners, architects and others involved in mapping and/or land development, such as subdivision layout, road layout, land division and boundary reconstruction. Co-Geometry can create new point locations and assign point ID numbers; calculate area, closure and point locations; calculate bearings, distances, areas, curve angles, radii, tangents, chords and arc lengths; adjust locations; and display points on screen. Major recent improvements are included.

Composite Wing Optimization
Structural design of composite aircraft wings
Macintosh 512K or larger.

Composite Wing Optimization is an engineering package designed for engineers working in the aerospace/aviation industry. A user can design models of composite aircraft wings by entering data into dialog boxes. After the preliminary model is completed, a user can review the data and modify the thicknesses by viewing the stress distributions, material allowables and margins of safety that are printed on one screen for each structural part. The program uses the Weissinger Discrete Vortex Method for determining the airload distribution for any wing configuration. Matrix calculations are used to determine loads, deflections, twist, tensile stresses, compressive stresses and shear stresses in the various components of the wing. A user can change the wing planform shape, wing airfoil shape, flight load conditions and material properties. The program takes into account the stiffness in the different structural parts. The graphics output includes stress plots, deflections, geometric definition and load distributions.

Computer Aided Design For Inductors And Transformers Mark VI
Increases the speed and analyzes existing magnetic components; minimizes the design time of new magnetic components
Macintosh 512K or larger; Microsoft Basic.

Computer Aided Design for Inductors and Transformers can be used to increase the speed and analyze existing magnetic components and minimize the design time of new magnetic components. Programs available in the package include: Transformer Design Using Iron Alloy and Ferrites; AC Inductor Design Using Iron Alloy and Ferrites; DC Inductor Design Using Iron Alloy and Ferrites, DC Inductor Design MPP Powder Cores and Sample Computer Printouts. Computer Aided Design for Inductors and Transformers Software has a stored database of more than 35 combinations of magnetic materials and thicknesses, including ferrites and molypermalloy powder cores. Information provided by the program can be output to a printer.

Computer Aided Transformer And Inductor Analysis Mark VI
Increases the speed of magnetic component analysis
Macintosh 512K or larger; Microsoft Basic.

Computer Aided Transformers and Inductor Analysis is used to increase the speed of doing analyses of magnetic components. The program was written primarily to assist an analysis engineer working with magnetic components. It simplifies the analysis of such components by taking into account all significant variables and using design equations that have been theoretically and empirically developed during the past few years. The program has a stored database of more than 35 combinations of magnetic materials and thicknesses, including ferrites, molypermalloy powder cores and powered icon cores.

Concept Vi
Image processing libraries
Macintosh Quadra; 8 MB of RAM; LabVIEW.

Concept Vi is a set of image processing libraries for LabVIEW, instrumentation software from National Instruments. It offers virtual instruments for image acquisition and visualization, qualitative and quantitative image analysis. Basic functions include image capture and display utilities, histogram and line-profile analysis. Processing functions include gamma corrections and histogram equalizations for contrast adjustment, convolutions and other spatial filters for the extraction of contours, noise removal, detail attenuation and texture enhancement. Frequency domain functions include two-dimensional Fast Fourier Transform frequency filtering and complex operators. Object manipulations include thresholding, opening, closing, hole filing, size filtering and other binary morphology functions. Quantitative analysis functions provide for spatial and intensity calibrations, automatic object counting, sizing and measurement. Parameters include area, perimeter, location, orientation, shape factors and many more.

ControlWare
Scientific simulation and control system design software
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 6.0.5 or later.

ControlWare is a powerful and easy-to-use tool for simulating, analyzing and designing dynamic systems and feedback controllers. Based on Extend, ControlWare is an all-graphical package with linear, nonlinear, logic, hierarchical and custom blocks, as well as signal generators and plotters. It even has built-in drawing tools for diagram annotation and block icons. Users arrange and connect icons to build a model in block-diagram format. ControlWare's simulation is interactive. There are eight integration methods for nonlinear simulation and random effects can be modeled in Monte Carlo simulation runs. For analysis, ControlWare uses virtual instruments to plot the various control system criteria, such as time response, frequency response and root locus. Describing functions are used for nonlinear analysis and linearization. Nonlinear analysis shows how nonlinearities affect system performance over a broad operating range. Linearization is done analytically for improved accuracy. ControlWare includes discrete and modern libraries.

Core Data Disk
More than 10,000 cores
Macintosh 512K or larger; Microsoft Basic.

The combined Core Data Disks will give engineers a selection of more than 10,000 cores that will operate with the following CAD maghetics design programs: Computer Aided Design for Inductors and Transformers Mark VI, Computer Aided Transformer and Inductor Analysis Mark VI, Flyback Converter Magnetics Design Mark VI, Specialty Design Magnetics Mark VI and Magnetic Core Data Conversion Mark VI. The data disks reduce the design time and give more time for optimization. The disks contain a variety of cores, including: tape toroid cores in 0.5 mil, 1 mil, 2 mil, 4 mil and 12 mil; C cores in 0.5 mil, 1 mil, 2 mil, 4 mil and 12 mil; powder cores, such as powdered iron, molypermalloy, high flux and kool mu; ferrite cores, such as toroids, pot cores, EC cores, RM cores, PQ cores, RS cores, DS cores, EP cores, ETD cores, EE EI cores and UU UI cores; and more.

Cosmos/M V1.70
Finite element analysis system
Macintosh SE/30 or larger; 16 MB of RAM; 40 MB hard disk drive; color monitor; color card; System 7.0 or later.

Cosmos/M is a finite element analysis (FEA) system that allows design engineers and analysts to perform linear and non-linear MCAE structural, thermal, fluid, fatigue and electromagnetic analyses in the automotive, aerospace, computer, electronic, industrial and medical industries. Cosmos/M determines stresses, strains, displacements, forces and temperature distribution in structures subjected to external loads, forces and imposed boundary conditions. Cosmos/M features an extensive element library, load options and material libraries with composites. It offers a straightforward CAD interface to allow any IGES or DXF file to be analyzed.

cumTerra
Land modeling
Macintosh II; 4 MB of RAM; hard disk drive.

cumTerra is a program for land modeling and earthworks calculation. It processes survey data — imported from text, DXF or PICT files or input by digitizers, numerically or graphically — by triangulation to build a 3-D model. The geometry of the model can be constrained by bridles to mark ridges and valleys. Views of the altimetrical trend of the ground include contour lines, cross-sections, depth-displays and 3-D views. According to specific planning requirements, the original ground model can then be modified within circumscribed regions by ground points alterations and the insertion of excavations, embankments, inclined planes, basins and man-made objects (e.g., buildings); cross-sections can also be edited to alter land morphology. Of all these regions, both areas and volumes are calculated and automatically updated. 3-D graphic elements (lines, arcs, splines, etc.) can also be inserted; they can even be used as guides for remodeling the ground. CDL library objects (trees, fountains, etc.) are available for completing the drawing. DXF libraries can also be accessed. Each element of the project is allocated to one of the 256 layers available and is given a name, a color and plotter information. cumTerra files can be exported in various formats (DXF, DDL-ArchiCAD, PICT, text) and plotted and printed in plan or cross section.

Datica II
Technical utility tool
Macintosh Plus or larger; System 6.0 or later.

Datica II is a technical utility tool. The unit conversion module handles everything. All physical measurements are supported by the program. Users can convert meter to feet or BTU/µs to J/yr. The program will convert a single unit pair or an entire list of units with a simple "click." The equation module solves any algebraic equation. It handles functions like SIN, ATN and LOG. The periodic table module has 12 properties for all 103 elements. Users can solve equations by selecting from grouped lists. Variables in the equations are automatically linked to a list of 500 constants. The periodic table looks like a periodic table or can be viewed as a list of elements. Users can add their own units, conversions, conversion categories, equations, equation categories and elemental data.

The Design Center
Analog and digital circuit simulator
Macintosh with floating point coprocessor; 2 MB of RAM; System 6.0 or later.

The Design Center provides the building blocks to form the foundation for a custom integrated analog or mixed analog/digital desktop EDA system. Control of simulation is menu drive. Interactive features include online help, stimulus waveform editing, device characterization and graphical waveform analysis of simulation results. For a custom EDA system, users can select from: Mixed Analog/Digital simulation, Analog-only simulation or a Small Circuit Analog (simulates approximately 100 transistors) simulation package. Extensive libraries include more than 7,000 off-the-shelf analog and digital part definitions. Each Design Center package includes a comprehensive five-volume manual set and the book "Spice, A Guide to Circuit Simulation and Analysis Using PSpice."

DesignWorks 3.1
Interactive electronic circuit design
Macintosh Plus or larger; 4 MB of RAM; System 6.0.3 or later.

DesignWorks is an integrated schematic diagram and digital logic simulation package for electronics engineers. Features include: completely interactive simulation; presents a "live" circuit on screen that responds immediately to connection, input and parameter changes; advanced schematic editing with bussing, multipage drawings, integrated symbol editor, error checking, cut/copy/paste, rubberbanding, etc.; full libraries of thousands of standard logic and analog devices; PLD and PROM simulation support when used with MacAbel; and net and component lists for PCB layout, Spice analog simulation, etc. It is also available for Windows 3.1.

Discsim
Six degree-of-freedom wave-frequency motion simulator for vessels with azimuthal symmetry
Macintosh Plus or larger; hard disk drive recommended.

Discsim is a comprehensive 6 degree-of-freedom wave-frequency motion simulation for the special case of azimuthal hull symmetry. This simulation is thus suited for simulation of buoy motions and loads in single-point mooring applications and for round vessel geometries often associated with operations in the presence of persistent ice. Discsim uses an efficient algorithm for the calculation of wave-frequency forces and moments which permits accurate simulation using as input only gross hydrostatic and mass properties. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions and an optional independent background swell. Accelerations, velocities and displacements at any point on the vessel can be computed. Effects of finite water depth are fully simulated and either English or metric units may be selected for vessel specification and data output. Output is in the form of amplitude and phase of vessel Response Amplitude Operators (RAOs) and/or statistical characterizations of vessel response to irregular wave conditions. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

DitchBuilder
Design and documentation of ditches, channels and swales
Macintosh Plus or larger; Microsoft Excel 2.2 or later.

DitchBuilder offers total control over the design and documentation of trapezoidal, triangular and parabolic section ditches, channels and swales. It uses variable or static Manning's 'n factors to intelligently select ditch linings from a range of grasses, riprap sizes and synthetics, according to user-defined parameters, for both initial conditions and design storm flows. Ditch sections may be constrained by depth, width, velocity or shear stress limits. Results are automatically posted to a schedule, with construction dimensions defined. DitchBuilder is easy to use, drastically reduces computation time and includes extensive documentation and context-sensitive cell notes. DitchBuilder is System 7 compatible.

Douglas CAD/CAM Layout Systems
Printed circuit-board design and manufacturing
Macintosh 512K or larger.

Douglas CAD/CAM is a family of products for electronic design and manufacturing. Conventional assembly procedures and surface mount technology (SMT) are supported in addition to solder masks and silk-screen layers. The software is particularly flexible, accommodating a variety of grids, pads, holes and trace widths. User-definable parts are accepted and include opportunities for custom pads up to 0.400 by 0.400-inches in size. A layout area of 32 by 32 inches, 50 levels of magnification and grid sizes down to 0.001-inch are provided. Depending on a user's output needs, there are three programs available. The Basic Layout allows users to complete all design work, but requires that they send their files to Douglas to generate photoplots and/or boards. No other output is available with this package. With Douglas CAD/CAM Print, users can generate dot matrix and LaserWriter output. Douglas CAD/CAM Plot allows for both print output and pen plot output on all popular plotters. The database created during layout can be used as the basis of the fabrication process at the Douglas CAM facility, controlling each step from layout through profile routing.

Douglas CAD/CAM Professional System
Integrated electronic design and manufacturing
Macintosh Plus or larger; 2 MB of RAM.

The Douglas CAD/CAM Professional System is a fully integrated engineering tool that will take a user from the schematic drawing to the final routed board. This end-to-end system includes Schematic Capture, Professional Layout and AutoRouter. Professional Layout has all the features of the Douglas CAD/CAM Plot program, in addition to full color support on the Macintosh II, unlimited multilayers and integration with DesignWorks and AutoRouter via the part and net list. DesignWorks includes digital simulation, bussing, user-definable devices and net list generation. Under System 7, the DesignWorks and Professional Layout programs can be linked to allow selections made in one program to be automatically highlighted in the other. The programs also feature Balloon Help. AutoRouter is a command-file driven, multipass router that will handle up to 16 layers. Running under System 7, it allows interactive selection between Professional Layout and DesignWorks. Upon completing the board layout, users can transfer their files directly to the Douglas CAM facility where photoplots and/or prototype boards can be produced. Quick turnarounds of 24 hours for artwork and three days for circuit boards are available. Other add-ons to the Professional System include Gerber conversion software (both in and out), drill file creation software and an analog simulation package, MacSpice.

DragonWave 7.0
Microwave/RF simulator
Any Macintosh with FPU; 2 MB of RAM; System 7.0 or later.

DragonWave is a full-featured linear microwave/RF simulator. It includes fully integrated schematic support with back annotation, robust optimizers and powerful interactive displays. New features include full nodal noise, up to 99 external ports, polar plots and a partitioning technique to prevent unnecessary recalculations. The complete element library includes both microstrip and stripline discontinuities or users can add their own element models. Users can use variables and equations in both element parameters and output equations. Tables and graphs show calculated responses for multiple circuits as a function of any one or two user-defined variables. Integrated reports can combine multiple displays, text, pictures and schematics to make exceptional data sheets. Calculated responses include S, Y, Z, spot noise, group delay, stability and more. Any circuit can be a subcircuit with user-defined parameters. Plots feature autoscaling and tuning features.
$2,990 retail
Nedrud Data Systems; 220 Versailles Dr.; Melbourne Beach, FL 32951

DragonWave Light
Microwave and RF circuit simulator
Macintosh Classic or larger; 1 MB of RAM.

DragonWave Light is a full-featured microwave and RF circuit simulator that combines schematic circuit description, linear frequency-domain simulation and optimization with interactive display functions. It fully implements the Macintosh user interface to significantly reduce learning and design time and increase its educational potential. Circuits are created by dragging elements from a palette and connecting them together. A netlist is created automatically and can be exported to other programs. The element library includes two-, three- and four-port data blocks, microstrip and stripline discontinuities, coupled lines, transformer and voltage-controlled current source. DragonWave calculates S-parameters, group delay, NF and stability circles, and displays them in reports, XY plots and Smith charts. Graphics have markers, memory and can be continuously zoomed. Reports are user definable, right down to the decimal places, and formats can be saved as style sheets. DragonWave works under System 7, and permits pasting text and graphics into other programs.

Nedrud Data Systems; 220 Versailles Dr.; Melbourne Beach, FL 32951

DS-Concrete
Concrete beam analysis and design
Macintosh 512K or larger; 800K disk drive or hard disk drive; Microsoft Excel.

DS-Concrete allows a user to analyze and design concrete beams, plot column interaction curves and design spread footings. It consists of four programs: Concrete Beam Analysis, Concrete Beam Design, Rectangular Concrete Column Design and Spread Footing Design. The programs are designed to reduce the time required to produce engineering calculations and reduce the chance of error. Online help and numerous examples are provided in the manual to explain the function of each program. The equations used to produce the output can be viewed while in each program and are they also included in the printed copy for supporting documentation.
$195 retail; HyperCard demo available
Daystar Software, Inc.; 8120 NW Hillside Dr.; Kansas City, MO 64152; 816-741-4310 or 816-421-1956 (fax)

DS-Steel2D
Steel frame and truss design
Macintosh Plus or larger; two 800K disk drives or hard disk drive.

The DS-Steel2D program designs steel frames and trusses according to the 1989 AISC ASD code. Design information, such as loads and member lengths, may be read from Frame Mac, text files or entered manually. In addition to the standard AISC shapes included in the program, users may create their own shapes. A complete AISC stress check is calculated. This includes allowable major and minor axis bending stresses, and allowable tension or compression axial stresses. Combined stresses that exceed code requirements are indicated, allowing changes to be made to these members. Additionally, DS-Steel2D will choose optimal beam and column sizes for the given loads.
$295 retail; working demo available
Daystar Software, Inc.; 8120 NW Hillside Dr.; Kansas City, MO 64152; 816-741-4310 or 816-421-1956 (fax)

DS-Steel3D
Steel beam, frame and truss design
Macintosh Plus or larger; two 800K disk drives or hard disk drive.

DS-Steel3D designs steel beams, frames and trusses according to the 1989 AISC ASD code. A complete AISC stress check is calculated. This includes allowable major and minor axis bending stresses and allowable tension or compression axial stresses. Combined stresses that exceed code requirements are indicated, allowing quick and easy changes to be made to these members. DS-Steel3D will also perform the actual member design. At a user's option, the program will choose the optimum member size based on the loads and geometry of the member. The depth and width of the member may be constrained to meet a user's requirements. Member data may be read from Frame Mac and Multiframe output files, text files or entered manually. Changes can be made by simply selecting one or more members and entering the new information. DS-Steel3D also includes section property databases for all AISC shapes. In addition, users may enter their own shapes.
$395 retail; working demo available
Daystar Software, Inc.; 8120 NW Hillside Dr.; Kansas City, MO 64152; 816-741-4310 or 816-421-1956 (fax)

DS-Wood
Wood frame and truss design
Macintosh 512K or larger; 800K disk drive or hard disk drive; Microsoft Excel.

The DS-Wood program designs wood frames and trusses according to the 1985 AITC code. Design information, such as loads and member lengths, may be read from Frame Mac, text files or entered manually. A complete AITC stress check is calculated. This includes major and minor axis bending stresses, tension and compression stresses and horizontal shear stresses. Combined stresses that exceed code requirements are indicated, allowing changes to be made to these members.
$195 retail; HyperCard demo available
Daystar Software, Inc.; 8120 NW Hillside Dr.; Kansas City, MO 64152; 816-741-4310 or 816-421-1956 (fax)

DSP Designer
Design environment for digital signal processing
Macintosh Plus or larger; 2 MB of RAM and floating-point coprocessor recommended; System 6.0.2 or later; MPW 3.0 or later.

DSP Designer is an integrated environment for modeling and designing Digital Signal Processing (DSP) algorithms and the implementation and testing of DSP software. DSP system modeling is based on a C-like interpretative language "Z," which includes important DSP extensions, such as difference equations, complex arithmetic and digital filtering. DSP Designer also features advanced design and analysis capabilities for FIR and IIR digital filters, as well as Fourier transform analysis, with pre-defined and user-supplied window functions. Filter code generation for the Motorola DSP56000/1, DSP56156 and DSP96002 digital signal processors is provided. Real-time recording and playback from a hard disk can include digital filtering or custom DSP56001 processing code, executing on a compatible DSP coprocessor card (Audiomedia II, Sound Accelerator II or Pro Tools Audio Card from Digidesign, Inc.). DSP Designer operates as an extension of the Macintosh Programmer's Workshop (MPW). Signal waveforms and filter transfer functions are displayed as graphics windows in the MPW Shell. All DSP Designer commands may be invoked from MPW "Commando" dialogs in a pull-down menu or as textual commands written in the MPW scripting language.
$895 retail
$995 retail; bundled with MPW

dV/dt
CAE timing diagram acceleration software
Macintosh Plus or larger.

dV/dt integrates digital signal waveform sketching, timing verification and test vector generation. It allows engineers to interactively perform digital design what-if calculations, such as varying clock speeds, logic types and memory speeds. In addition, it provides an automatic documentation feature that frees the designer from the tedious task of manually drawing timing diagrams by hand. Features include: interactively sketch, model, analyze and print timing diagrams; perform what-if calculations; perform common path and common part analysis; display signal edges with min./max. uncertainties; display available time between edges; define propagation symbols; generate clock signals automatically; online help; import and export symbols to/from symbol libraries; verify setups, holds, pulse-widths and cycle times; save and retrieve files; generate test vectors; and more. Timing libraries are also available.

Dynamics & Vibration Analysis
Helps engineers to analyze the vibration of structures
Macintosh 512K or larger; 2.5 MB of hard disk space; TK Solver.

Dynamics & Vibration Analysis, based on "Formulas for Natural Frequency and Mode Shape" by Dr. Robert D. Blevins, is an application that helps engineers to analyze the vibration of structures and fluids in minutes instead of hours. It allows engineers to easily solve vibration problems with forward and backward analysis and to produce plots of mode shape by simply making a menu selection.
$595 retail
Universal Technical Systems, Inc.; 1220 Rock St.; Rockford, IL 61101; 815-963-2220, 800-435-7887 or 815-963-8884 (fax)

ECA-2
Analog circuit simulation program
Macintosh 512K or larger.

ECA-2 is an analog circuit simulator that provides simulation times more than twice as fast as Spice. Graphics are plotted as the points are computed in real time. Data can also be displayed in tabular form. ECA-2 is fully interactive, or a batch mode can be used. Other features include AC, DC, transient, Fourier, temperature, worst-case and Monte Carlo analyses. An analysis can be performed at a temperature while sweeping component values. Also included are extensive non-linear capabilities, Spice-compatible models and sine, pulse, PWL, SFFM and exponential function generators.

EC-Ace is a low-cost subset of ECA-2. It offers the same interactive style; AC, DC and transient analyses; and high-quality real-time graphic output. It does not offer Fourier, worst-case, Monte Carlos analyses, commands to sweep components and some other advanced ECA-2 component functions. An upgrade from EC-Ace to ECA-2 is available.
$775 retail; ECA-2
$145 retail; EC-Ace

Electro Bits
Circuit graphics
Any Macintosh; external disk drive or hard disk drive; MacPaint, SuperPaint, FullPaint or compatible program.

Electro Bits is a collection of more than 200 electronic elements and more than 40 microcomputer template symbols to draw circuit diagrams and flow charts. All of the elements and symbols are indexed into libraries. The program is comprised of the following libraries: Amplifiers, Audio, Capacitors, Filters, Flip-Flops, Flow Charts, Gates, Integrated Circuits, Miscellaneous, Resistors and Semiconductors. Electro Bits can be used to create schematics and circuit diagrams, generate flow charts and assembly drawings and more.

It includes more than 50 24-point schematic font symbols. It is available in English or Spanish.
$24.95 retail U.S.; $35 retail non-U.S. (also available in PictureBase and HyperCard format)
$5 retail U.S.; $7 retail non-U.S. Demo

Engineer's Aide
Integrated package of programs for process engineering calculations
Macintosh II, PowerBook, Quadras, Power Macintosh; 4 MB of RAM (640 by 400 min. resolution).

Engineer's Aide is an integrated process engineering package designed for chemical, mechanical and process engineers. Pipeline/Duct/Network sizing utilizes a patent pending Smartdraw interface to graphically model and simulate process piping systems. Nodes and equipment appear on the screen as pipelines are automatically drawn with alignment and connections guaranteed. Pump/Fan/Compressor sizing determines system requirements and compares this to a library of manufacturer's data to determine the operative condition. Heat Exchanger sizing sizes shell and tube heat exchangers for either liquid, gas, condensing or boiling on either side without supplying thermal conductivity or heat transfer coefficients. Other equipment sizing includes orifices, venturis, flow nozzles, control valves and relief valves. The Conversion Calculator provides quick conversion of hundreds of engineering units. The Project Manager provides a status summary of projects, project cost estimation and project financial analysis. The Specification Writer then provides custom specifications for purchasing any of the equipment sized in Engineer's Aide. An online fluid properties library determines fluid properties at any temperature or pressure and loads these values into any equipment sizing module. The Professional XL version contains the AIChE DIPPR database of 1,284 fluids with 39 properties.

Engineering Symbols Library
Design and drafting symbols
Macintosh Plus or larger; Claris CAD, MacDraw II or PowerDraw.

Engineering Symbols Library is a design and drafting symbols library that contains a wealth of two-dimensional engineering symbols precisely drawn to conform to ANSI standards. This two-disk volume contains more than 1,500 symbols commonly used by mechanical, electrical and chemical engineers and designers. Features include: graphical symbol libraries for heating, ventilating and air conditioning; heat-power apparatus; chemical process flow equipment; pipes, pipe fittings and valves; chemical structures and elemental symbols; arrows; electrical and electronics symbols; graphic symbols for electronic logic functions; welding symbols; surface texture symbols; mechanical springs; machine screws, nuts and washers; square, socket, wood and miniature screws; hex bolts; wing nuts; thumb screws; and rivets.
$79 retail; available in Claris CAD, MacDraw II, PowerDraw or PICT format
Northstar Engineering Design; 14936 Camdon Hill; Eden Prairie, MN 55347; 612-937-5038

Engineering Tool Kit
Engineering data; graphics; statistics; regression analysis
Macintosh Plus or larger.

The Engineering Tool Kit records numeric engineering data, translates data into engineering graphics form, generates statistical reports and provides best-fit curves. It is System 7 compatible.
$199 retail
Sof-Ware Tools; PO Box 8751; Boise, ID 83707; 208-343-1437 or 208-336-2536 (fax)

FaultrEase
Interactive graphics editor for fault trees
Macintosh Plus or larger; 3 MB of RAM.

FaultrEase is an interactive graphics editor for fault trees. It allows users to easily create, edit and draw fault trees. FaultrEase also performs fault tree mathematics, including mixed probability and frequency calculations, boolean reduction and cut sets. A state-of-the-art direct-evaluation algorithm computes statistics and cut sets in near real time for even very large trees. As users edit the fault tree, FaultrEase automatically calculates the placement of symbols, labels and other annotation. This lets users concentrate on the content of the tree rather than on the form. As a result, users can rapidly create new trees or modify existing ones. FaultrEase provides all of the symbols from the industry standard reference "Fault Tree Handbook" (NUREG-0492). The program allows a wide variety of presentation options and generates report-quality printouts. Standard Macintosh user interface conventions are observed throughout.

Flow-Mate
Engineering HyperCard stack
Macintosh Plus or larger; HyperCard 1.2.5 or 2.0 (specify which).

Flow-Mate is a user-friendly, graphical-oriented, technical HyperCard stack that provides engineering data and analytical capabilities for fluid design and engineering professionals. It includes a corrosion compatibility chart, conversion factors, a saturated steam table, liquid, gas and material properties tables, plus steel pipe data. An analysis menu allows users to calculate valve liquid, gas and steam flow rate, Cv or differential pressure drop, valve noise and common valve parameters. In addition, users can analyze pipeline flow and minor losses in various flow devices, calculate surface areas and volumes for different solid shapes, calculate minimum allowable wall thicknesses for various pressure vessels, plus determine pressure temperature ratings for different valve trim materials. Flow-Mate also contains generic information with regards to different styles of valves and different types of actuators, as well as extensive online help to aid users in fully utilizing this stack. The full version is not copy protected.

Flyback Converter Magnetics Design Software Mark VI
Enables a user to design buck converters, boost converters, inverting buck-boost converters and isolated multioutput buck-boost converters
Macintosh 512K or larger; Microsoft Basic.

Flyback Converter Magnetics Design vastly simplifies the design process by allowing engineers to design continuous or discontinuous current flyback magnetic components in a fraction of the time usually required. Using this program reduces design time by quickly picking up files generated by FileMaker. The program can stand alone or operate with Magnetic Core Data Conversion with FileMaker. Flyback Converter Magnetics Design enables a user to design buck converters, boost converters, inverting buck-boost converters and isolated multioutput buck-boost converters. With this software tool, a user can optimize magnetic components designs for efficiency, size, weight, copper loss, core loss, number of turns, temperature rise and cost. The program includes a working database of nine different materials and 10 molypermalloy powder cores. Programs available in the package include: Continuous Currents; Discontinuous Currents; Buck Flyback Converter; Boost Flyback Converter; Buck-Boost Flyback Converter; Inverting Buck-Boost Converter and Sample Computer Printouts.
$110 retail; no charge for updates
KG Magnetics, Inc.; c/o Sherwood Associates; 2135 Huntington Dr., Ste. 201D; San Marino, CA 91108; 818-568-8443 or 818-568-8534 (fax)

Frame Mac
Structural frame analysis and design
Macintosh Plus or larger; floppy disk drive or hard disk drive; ImageWriter or LaserWriter.

Frame Mac analyzes and helps design two-dimensional frames and trusses, as well as any beam. The program allows any number of nodes, supports, elements and static loads, including node, element, sloped, moments and trapezoidal, to be distributed. Each node may be rigid or partially or fully hinged; each element can have its own characteristics. There can typically be up to about 200 nodes and 400 elements per MB of RAM. A user can draw and change structures and loads with the mouse and/or keyboard; change scale, units and decimal format; apply loads in groups with factors using the stiffness matrix method; and more. A main window shows the original and/or deflected shape, loads, etc. A separate window shows elements with loads, tension, shear, moment and deflection. Another window shows any node as a free body with all loads, forces and moments acting on it. Four other windows show input text, output text and section table.

GD&T E-BOD
Geometric tolerancing; electronic book on disk
Macintosh 512K or larger; external disk drive or hard disk drive; Microsoft Excel 3.0.

GD&T E-BOD is an electronic book on disk. It begins by detailing the difference between U.S., Canadian and European rules, Interpretations and theories and develops the entire GD&T system using the U.S.A. vision. Prior to the discourse on Geometric Tolerancing, users learn of Gladman's papers and how he energized the mini revolution toward Geometric Tolerancing. Each concept, usage, theory, etc., and all symbology is broken down and explained, eventually leading a reader to the logic as to why the mechanics of, and system itself, is necessarily the way it is. Stepped analysis is used in positional and other calculations. An entire section is devoted to metric and customary "Limits and Fits"; the Geometric Tolerances are more graphically explained than those in other books. It features large graphics and is not protected.
$23 retail
International Geometric Tolerancing Institute, Inc.; 2943 Cortina Dr.; San Jose, CA 95132; 408-251-7058

Gear Analysis On TK
Expert system software and TK Solver Plus models
Macintosh Plus or larger; 1 MB of RAM.

Gear Analysis on TK is expert system software along with more than 75 TK Solver Plus models. The expert system will optimize center distance, backlash, addendum/dedendum changes (cutter feed), design tooling, check for probability of gears, minimized weight and much more. It allows users to reduce manufacturing costs as much as 40 percent and save on design time as much as 80 percent.

Heat Transfer On TK
Solves heat transfer problems
Macintosh 512K or larger; hard disk drive.

Heat Transfer on TK offers engineers a comprehensive software tool for thermodynamic analyses. It is based on the third edition of "Fundamentals of Heat and Mass Transfer," by Incropera and DeWitt. Heat Transfer on TK covers more than 250 models and includes an expandable table for gas, fluid and material properties. The program utilizes a sophisticated menuing system developed by Universal Technical Systems, Inc. (UTS). The UTS Menuing System allows users to quickly locate, load and merge any of the desired cases. Users can quickly plot the results and analyze many different design alternatives in minutes.

HEC-1
Flood hydrograph computation and watershed modeling
Macintosh Plus or larger; 1 MB of RAM (2 MB recommended); hard disk drive; math coprocessor supported, if available.

HEC-1 allows water resource engineers to simulate the surface runoff response of a river basin to precipi-

tation by representing the basin as an interconnected system of hydrologic and hydraulic components. The result of the modeling process is the computation of stream flow hydrographs at desired locations in the river basin. Features have been added to the original Corps of Engineers program to make it more than just another "port" to the Macintosh. In addition to a complete Macintosh interface for basic run-time options, this version provides an optional tab-delimited file for all sub-basin data suitable for direct import to any spreadsheet or graphing program, and runs in the background under MultiFinder. HEC Data Storage System (DSS) capability is also provided. HEC-1 is fully compatible with System 7, virtual memory and 32-bit addressing.
$395 retail
Hydrotech Microsystems; PO Box 40184; Portland, OR 97240; 503-257-6926

HEC-2
Water surface profiles
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; math coprocessor supported, if available.

HEC-2 is an industry standard program that allows water resource engineers to determine water surface profiles for steady, gradually varied flow in natural or man-made channels. Both subcritical and supercritical flow profiles can be calculated. Features have been added to the original Corps of Engineers program to make it more than just another "port" to the Macintosh. In addition to a complete Macintosh interface for basic run-time options, this version provides an optional tab-delimited file of all summary table data (sorted by profile, not cross section) suitable for direct import to any spreadsheet or graphing program, and runs in the background under MultiFinder. The EDIT-2 data checking program is included, and has been enhanced to allow change of run-time options on the fly if the desired options are not present in the HEC-2 data file. HEC-2 is fully compatible with System 7, virtual memory and 32-bit addressing.
$395 retail; includes EDIT-2 data checking program
Hydrotech Microsystems; PO Box 40184; Portland, OR 97240; 503-257-6926

HEC-5
Simulation of flood control and conservation systems
Macintosh Plus or larger; 2.5 MB of RAM (4 MB recommended); hard disk drive; math coprocessor supported, if available.

HEC-5 allows water resource engineers to simulate the sequential operation of a reservoir-channel system with a branched network configuration. Any computational time interval from one minute to one month can be used, depending on the detail required. Sizing of conservation demands or storage can be automatically performed, using the safe yield concept, and economic computations can be provided for hydropower benefits and flood damage evaluation. The HEC Data Storage System (DSS) is supported in this enhanced version of the original Corps of Engineers program. In addition to a complete Macintosh interface for basic run-time options, this version will run in the background within the MultiFinder environment. The CKHEC-5 data checking program is included to minimize data input errors. HEC-5 is fully compatible with System 7, virtual memory and 32-bit addressing.
$595 retail; includes CKHEC-5 data checking program
Hydrotech Microsystems; PO Box 40184; Portland, OR 97240; 503-257-6926

HEC-WRC
Flood flow frequency analysis
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; math coprocessor supported, if available.

HEC-WRC was developed to perform a thorough analysis of peak flow data applying the log-Pearson Type III distribution. Methodology conforms fully to WRC Guidelines Bulletin 17B. It properly weighs the computed skew coefficient with the input generalized skew coefficient; performs a conditional probability adjustment for missing data; produces results that account for high and low outliers; properly incorporates any historical events; computes confidence limits specified by a user; and provides additional output of the frequency data using the expected probability adjustment. Hydrotech's version of this Corps of Engineers program takes advantage of the Macintosh user interface, and produces tab-delimited output of all computations suitable for direct import into any spreadsheet or plotting program. HEC-WRC runs in the background under MultiFinder and is fully compatible with System 7, virtual memory and 32-bit addressing.
$195 retail
Hydrotech Microsystems; PO Box 40184; Portland, OR 97240; 503-257-6926

HiQ
Integrated system for solving engineering and scientific problems
Macintosh SE/30 or larger; 4 MB of RAM; coprocessor.

HiQ is a powerful, integrated environment for solving real world engineering and scientific problems on a Macintosh — from elementary academic problems to the most complex industry projects. Four components work together in HiQ to complete projects quickly and logically. The Project Worksheet is a transparent interface that lets users dynamically organize and manipulate numerical data, two- and three-dimensional graphs, HiQ-Script programs, annotated text and HiQ's Problem Solvers. HiQ-Script is a structured programming language, designed specifically for engineers and scientists, that intrinsically contains HiQ's mathematical functions. Problem Solvers are graphical interfaces for solving standard applied math problems that automatically generate HiQ-Script code along with numerical and graphical results. The Analysis Engine is a core of more than 600 mathematical and graphical functions ranging from standard lower-level functions to many of the world's most powerful mathematical programs.

Igor Filter Design Lab (IFDL)
Interactive design, evaluation and application of Finite Impulse Response digital filters
Macintosh Plus or larger (Macintosh SE/30 or II recommended); 1.5 MB of RAM available to Igor; Igor V1.22 or later; System 6.0.2 or later.

The Igor Filter Design Lab (IFDL) is a sophisticated and flexible environment for the interactive design, evaluation and application of Finite Impulse Response (FIR) digital filters using the Macintosh. Built upon and requiring Igor, WaveMetrics' scientific and graphing application, IFDL automatically provides extensive and flexible data analysis, publication-quality graphics and super-fast interactive screen graphics. Applications of IFDL include the design of FIR filters for use with external programs, hardware or within Igor to filter data and experimenting with Digital Signal Processing (DSP) techniques.

Inertia
Engineering modeling, analysis and design system
Macintosh II family.

Inertia is many different software packages integrated under one multitasking shell to allow for seamless integration of engineering tasks. Inertia simulates testing and prototyping for automotive, aerospace, mechanical, structural, civil and architectural engineers. Multiple modules make up the Inertia product for the following tasks: FEA (InSolid), Heat transfer (InThermal), kinematics and mechanical dynamics (InMotion), Dynamic Analyses (InDynamic), engineering properties (InProp), nonlinear structural analysis (InPlastics) and Structural Design (InFrame). Inertia interfaces with CADDs 5 directly through MCAE's integration product, INCads. This interface is a binary integration achieved through use of CV Dors. Inertia has compliance with standard user interface guidelines such as Microsoft Windows, Apple Macintosh, OSF/Motif, as well as Sun Open Look. Interia uses the latest algorithms in engineering to provide high-ly accurate results in high-performance environments.

Instrument Archive V4.1
Instrumentation and control
Macintosh II family; 4 MB of RAM; hard disk drive; 12-inch screen.

Instrument Archive is a is a multiuser management system for instrument, process control and maintenance professionals in the petrochemical, petroleum, chemical, pulp and paper, and mining industries. Designed and used for project engineering, as well as on-going process requirements, Instrument Archive allows complete specification and description of instruments used in process control. Special emphasis is placed upon the capability to generate datasheets and to configure user reports. Three extensions are available, which may be added at any time. Maintenance Access allows maintenance and calibration disciplines to look up, amend and track instrument performance. Honeywell DCS Configuator allows generation of Honeywell TDC 3000 Process Manager exception builds files directly from Instrument Archive. It allows direct read/writes to Honeywell-formatted Bernoulli cartridges. AutoCAD P&ID Link provides a link from the database to AutoCAD Process and Instrument drawings, allowing ceation and update of database to/from P&ID.

Knowledge Revolution Working Model
Motion simulation for animators and engineers
Macintosh II or larger; 4 MB of free RAM; hard disk drive with 3 MB of free space; System 7.0 or later.

Now users can visually build and export motion using Working Model. Falling, colliding, bouncing — anything imaginable is as simple as draw and click. Working Model's precise dynamic simulation engine lets users create objects with real physical attributes like mass and elasticity and then apply real forces like gravity and wind. Working Model features a dynamic Smart Editor that lets users move objects as in the real world — a chain stretches when a single link is pulled on. Artists can quickly build moving systems and export directly to Macromedia Three-D, or a host of other animation and CAD programs. Engineers can rely upon Working Model's 20 digits of accuracy, variable time-step calculations and exportable data to create stunning moving simulations.

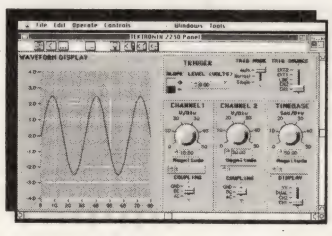
LabVIEW
Complete graphical programming system with built-in compiler for data acquisition, analysis, presentation and instrument control
Power Macintosh or any Macintosh with a coprocessor; 8 MB of RAM; hard disk drive; System 6.0.4 or later; 32-bit QuickDraw.



LabVIEW (Laboratory Virtual Instrument Engineering Workbench) is a graphical programming system for instrumentation. LabVIEW features a unique icon-based compiled programming language and user front panel interface for engineering and scientific applications. Users can build interfaces that make it quick and easy to train operators to use the software. Users program these virtual instruments (VIs) by building block diagrams. Users can acquire data from GPIB, VXI, RS-232 instruments, or from National Instruments plug-in data acquisition boards. Users can control more than 400 instruments by the ready-to-use icons in the Instrument Library. Analysis functions in

These Products Available Through Bottom Line Distribution
1-800-347-1923

LabVIEW include statistical processing, array manipulation and digital signal processing. Application areas include process monitoring and control, laboratory automation, instrument control, manufacturing automation, automated test, signal processing, simulation, design and classroom instruction. Users can execute complete VIs with run-time systems for run-only test stations or use the LabVIEW Application Builder to create stand-alone executables for distribution. Also available is the Test Executive Toolkit, a powerful, flexible package for automated sequencing of test programs. LabVIEW applications are compatible with LabVIEW running on Windows-based PCs and Sun SPARCstations. A native version for Power Macintosh is available.

LapCAD
Finite element modeler
Macintosh Plus or larger, including PowerBook 100; 2 to 8 MB of RAM; 20 MB hard disk drive.

LapCAD simplifies finite element modeling for MSC/pal and MSC/Nastran. Finite element specific formatting and complex geometric computations are replaced with simple manipulation of highly visible graphics. The postprocessing capability includes color shaded stress contours, animation of deformed shape and point and click inquiry mode. LapCAD has all of the built-in features that allow construction of model geometry, similar to the way three-dimensional objects are developed with a CAD program. These features include copying, mirroring, rotation, translation, expansion, contraction, deletion and snapping together, as well as linear and circular extrusion. All manipulations take place in either the global coordinate system or any user-defined system. Built-in macros allow for easy starting points for many objects. Finite element features are implemented into LapCAD, such as application of physical properties and external forces and constraints. New features include: automatic cursor, line/surface conversion, element orientation, layering, edge plot, pressure gradient, model checking, line edit, user solution format and multiload cases. These quantities can also be echoed back in a graphical manner that allows for easy verification. The program handles up to 15,000 nodes and elements. LapCAD imports DXF and IGES files. It also computes the volume enclosed by complex parametric spline surfaces. LapCAD is System 7 compatible.

LaserTechFonts 3.1
Scientific equation and electronic circuit fonts
Any Macintosh; System 6.0 or later.

LaserTechFonts is a package of nine technical writing and drawing fonts. SciFonts, used for typing equations, contains the following individual fonts: Scientific, SubScientific, SuperScientific, Fraction and Cursive. Each font contains the English alphanumeric set of characters. All but the cursive font also contain mathematical and Greek character sets and can be used to create two levels of subscripting or superscripting. These same fonts are appropriate for typing subscripts on superscripts, and vice versa. They can also be used to type summations, integrals, partial derivatives and other expressions. Special overtyping characters allow dots, dashes, hats, tildes, arrows, square roots and strike-outs over characters.

ElectroFonts, used when typing or drawing electronic analog and digital circuits, contains the following fonts: Electronic, ElectronicDraw, Digital and DigitalDraw. Electronic and ElectronicDraw contain all standard analog circuit symbols. Digital and DigitalDraw contain all standard digital logic circuit symbols. Electronic and Digital may be used together in a word processor for circuits containing both analog and digital symbols. ElectronicDraw and DigitalDraw may be used together in a drawing or painting program. Manual and keyboard layouts are included, as are PostScript printer files and screen display fonts.

LifeFrak
Estimates creep remaining life of power plant piping
Macintosh Plus or larger; 2 MB of RAM; 800K disk drive; System 6.0.4 or later.

LifeFrak calculates the creep remaining life of the chromium-molybdenum (Cr-Mo) steels that are prevalent in power plant, high temperature piping. The application not only estimates remaining life, but also calculates when various stages of creep had occurred in the past. LifeFrak calculates the end-of-life for Cr-Mo steels based on metallographic assessment of creep cavitation and on the age of the steel. Hours and dates for creep cavity progression and for the end-of-life are shown graphically. The application also recommends a reexamination date. Because it calculates the past progression of creep cavitation, it is also useful as a failure analysis tool.

LogicWorks
Digital circuit design package
Macintosh Plus or larger; hard disk drive recommended.

LogicWorks is an educational digital circuit design package that features a fully interactive "live" simulation, user-definable devices, logic-analyzer timing diagram output and more. Additional features include: an unlimited number of circuit windows can be opened at once; "strip-chart" printing mode allows the simulated circuit output to be printed continuously on an ImageWriter or LaserWriter; PICT file output of circuit and timing diagrams; "autonaming" features allow automatic generation and positioning of sequential names and pin numbers; arbitrary groups of devices and signals can be selected for Cut/Copy/Paste operations; circuit simulation can be performed as a background task concurrently with other applications; and more. The package includes a set of 7400-series device libraries (40 devices), analog and LSI symbol libraries (no simulation) and net list utility. The full 7400 libraries (200 devices) are available separately.

MacAbel
Programmable logic device design
Macintosh Plus or larger; 4 MB of RAM; System 6.0.3 or later.

MacAbel is the Macintosh version of the industry standard Abel PLD design software for creating, modifying and simulating PLDs. Exclusively developed for the Macintosh, MacAbel provides all the high-performance features and device support of Abel on the PC. The MacAbel PLD library supports many PLD architectures. Designs can be entered using any combination of high-level language equations, state diagrams or truth tables. MacAbel includes the powerful Abel Hardware Description Language and superior logic reduction. MacAbel creates programmer load files in the JEDEC standard 3A and is compatible with any programmer supporting this standard. In combination with the DesignWorks schematic capture and digital simulator interface, MacAbel provides a fully integrated PLD solution. DesignWorks will allow PLD designs to be simulated interactively in their complete circuit environment.

$2,640 U.S. retail; combined DesignWorks/MacAbel package
Capilano Computing, Ltd.; #406, 960 Quayside Dr.; New Westminster, BC, Canada V3M 6G2; 604-522-6200, 800-444-9064 or 604-522-3972 (fax)

MacAdam
Road design
Macintosh II; 4 MB of RAM; HD20.

MacAdam is a graphic and interactive program for road design and earthwork calculation. MacAdam is organized in accordance with the two methodologies of the ground data insertion: dotting or section mounting with further development of the project (plan, longitudinal profile and cross sections). The country survey of point coordinates can be loaded into the calculator by numerical input or by a wild electronic disastimeter by means of a GR3 field computer, or by ASCII text file. By means of an interpolation of successive triangles, MacAdam creates a grid over the whole ground and checks the presence of eventual errors. Once created, the program will work out the contour lines, their equidistance being user definable. The road planning is performed at the same time on three views: plan, longitudinal profile and cross section. The program will consider single stretches of road identified by three vertexes. A user can also insert fixed radius curves and Cornu spirals. A graphics editor allows the input of topographic information into the plan. After the road axis outline is inserted into the plan, MacAdam calculates the ground profile. The final altimetric section with its relative road bumps will be settled over it. The cross sections are realized once axis designing in plan and profile is achieved. The cross section shape can be selected from a library. The same procedures are taken for face walls, offlets and fosses, which are available in an open-structure library.

MacBeam
Reinforcement design
Macintosh Plus or larger.

MacBeam is a reinforcement design program. It uses both allowable stress and limit states design methods (Eurocode 2). Combined axial force and bending moment is considered. Design is carried out for automatic combinations of eight basic load cases. The bar layout is displayed and can be modified, if required, in an easy, graphical way. All of the modification effects are represented in color diagrams and are taken account for stress checks, interaction diagrams, bar list, etc. A large-format sheet is used so that many groups of elements can be dealt with at the same time. IGES format is supported.

MacCad
Twelve separate drafting templates for engineers and architects for use with MacDraw, MiniCad, MacDraft, SuperPaint
Macintosh 512K or larger.

MacCad Architecture consists of three separate symbol libraries: Residential Architectural Design, Commercial Architectural Design and Layout Planner. These libraries are shown in plan and elevation views and are offered in 1/8-, 1/4- and 1/2-inch. The Drafting Toolkit contains ANSI border sheets in sizes A to E to customize the title block.

MacCad Electrical and Electronic symbols are vector graphics and are drawn to IEEE standards and are supplied in three different sizes. Two-State Logic, Analog & Digital Logic and Composite Assemblies are covered in this package and in the Flow Charts and Logic package.

MacCad Mechanical Design package symbols are also vector graphics and drawn to ANSI standards. These include HVAC, valves, fasteners, etc.

MacCad Piping consists of three comprehensive separate symbol libraries: Single Line Orthographic Piping, Two-Line Orthographic Piping and Single Line Isometric Piping. All symbols are vector graphics and drawn to ANSI standards. All valve and fitting symbols, drawn to Crane Co. standards, are scaled (one inch equals one foot) and are shown in three orthogonal views. A complete set of Mechanical Flow symbols are included.
$69 to $249 per package retail; Architecture, Electrical & Electronics, Mechanical Design, Piping

MacCulvert
Culvert analysis program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

MacCulvert has the capability to analyze different types of flow regimes that are encountered within culvert design and analysis. The approach taken is similar to the design concepts used within the HEC-5 design methodology. Pressure flow or a combination backwater and pressure flow analysis is accommodated through proper analyzing techniques to develop the computed headwaters. This program helps designers of culverts in both the analysis of existing culverts and for the design of new culverts. The objective of this program is to allow designers to experiment with different culverts to help design the most cost effective and hydraulically efficient culvert. The results of the culvert analysis are displayed and can be printed in table format similar to the traditional HEC-5 culvert analysis worksheet.

MacDSP Lab For IPLab
Hardware/software bundle targeting scientific imaging professionals
Macintosh II family.

MacDSP Lab for IPLab is a hardware and software accelerator system compatible with IPLab, comprehensive scientific image processing software from Signal Analytics Corp. Spectral Innovations enhancements take the form of a set of IPLab Extensions that users simply drag to their IPLab folder. These Extensions take advantage of the MacDSP hardware from Spectral Innovations to provide image processing and analysis functions that operate at four to 10 times the speed of similar functions in IPLab. The combination of hardware and software is targeted for image processing users in scientific, laboratory, government and industrial applications where speed and processing throughput are essential.
$295 retail; set of IPLab Extensions
$2,195 retail; gray-scale/pseudo-color package (includes IPLab, the MacDSP256KN accelerator and Extension software)
$2,395 retail; full-color package (includes IPLab Spectrum, the MacDSP256KN accelerator and Extension software)

MacDSP-APL
Array processing libraries for C, Pascal, Basic and Fortran
Macintosh SE/30 or II family; 1 MB of RAM.

The MacDSP-APL is designed for algorithm development, analog input and output from high-level languages and acceleration of scientific programs. It contains more than 150 precoded vector, matrix, math, filtering and DSP routines that let a user take advantage of the MacDSP floating-point coprocessor boards and data acquisition daughter cards. Routines are callable from LightspeedC, Lightspeed Pascal, MPW C, MPW Pascal and Basic. The MacDSP-APL memory manager optimizes use of the MacDSP processor memory and makes hardware considerations transparent to programming.

MacFlood Route
Hydrograph and routing package
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

MacFlood Route is a flood routing program that generates hydrographs and uses the storage indicating method for flood routing through a stage/storage/discharge curve. Users specify curve, and quick adjustments can be made to help in designing a system. The program includes detention design routine for graphically displaying and calculating required retention/detention volumes for stormwater facilities. Once the stormwater storage volume is computed, a volume analysis routine can be used to determine estimated areas required for stormwater retention/detention areas. As an added feature, open channel flow calculations can be performed on several typical ditch/swale sections for normal depth and backwater effects.
$200 retail
Engineered Solutions; PO Box 391; Geneva, FL 32732; 407-349-9985

MacRoad V3.6
Road design
Macintosh Plus or larger; 1 MB of RAM.

MacRoad is a program that lets users design roads as they always have — graphically. It can be used without the need to learn complicated commands or special formulae. All design is done on the screen. If a user changes any part of a design, the program instantly recalculates these changes and updates the screen views of the road. Drawings can be produced on printers and plotters or transferred to other Macintosh applications. MacRoad provides users with the capability to: create a terrain model of a survey; draw typical sections from a palette of tools representing curb and pavement types; visually locate the horizontal and vertical alignment using the mouse; switch instantly between views of the profile, plan, cross sections, typical sections or schedule of quantities; create a three-dimensional drive through simulation; automatically calculate and apply superelevation and plan transitions; and design in metric or imperial units at a range of scales. MacRoad also includes terrain modeling, smooth contouring and an interface to survey data loggers.

MacSap
Finite element system
Macintosh II family.

MacSap is a linear and non-linear elastic static and dynamic analysis program for three-dimensional structures. The Finite Element Method is used. The FEM mesh is built in a very easy and clever way using the graphical interface of the Macintosh. Input and output data are both numerically and graphically represented to check the structure model and the analysis results. A large finite elements library is supported with 2-node, 3-node, 4-node and 8-node elements. Static analysis for six basic load cases, modal analysis, response spectrum technique, time history and step-by-step integration are provided. A very efficient non-linear analysis for geometric non-linearity is available for truss and beam elements. Optimized for Power Macintosh.

MacShapes
Geometric and structural properties tool
Macintosh Plus or larger; floppy disk drive or hard disk drive; ImageWriter or LaserWriter.

MacShapes allows a user to draw and change any combination of rectangular and circular shapes and to immediately see dozens of geometric and structural properties. Features include: use the mouse and/or keyboard to change defaults, to draw, move, align, change or resize shapes and more; the ability to change properties, shades or sizes of groups of shapes; the ability to change colors or shades of gray with a Macintosh II; change scale, ruler, units, decimal format, etc., by clicking; choose what will appear in each of the three windows from a list of nearly 40 properties (the diagram window shows shapes with optional text, the list window shows information on each shape and the summary window shows sum of areas, average density and modulus of elasticity, total moment of inertia, etc.); print anything directly on an ImageWriter or LaserWriter; save or copy information in a variety of formats for use by other programs, including spreadsheets; undo almost any command; open multiple documents; compatible with large screens, System 7, networks, MultiFinder, etc.; auto scrolling; choose from English and metric units; seven decimal digit precision for all math; and more.

MacSigma-2000 Optical Design Software Series
Optical design series
Macintosh SE/30 or larger; 4 MB of RAM; hard disk drive; System 7 or later.

The MacSigma-2000 is an integrated optical analysis and design program package for optical scientists and engineers, and for teaching university-level optics. MacSigma-2000 consists of a main program and several add-on modules. The main program (three levels available) provides a full set of optical analysis features, including Gaussian beam calculations, diffraction-based MTF, ghost analysis, athermalisation, etc. Powerful optimization can use OPD, MTF or thermal effects as a target. Multiconfigurations (zooms, scanners, multichannel systems) are implemented. The program supports spherical, conic, aspheric, cylindrical, toroidal, diffracting, holographic and gradient-index surfaces. All tables and drawings can be printed in report-quality graphics. The program can generate DXF CAD files. Seven glass catalogs and catalog parts from leading suppliers are provided. The Illumination Analysis Module allows the analysis of problems of non-imaging optics and light energy distribution after passing through an optical system. The Narcissus Analysis Module evaluates the contributions of optical surfaces to the spurious Narcissus optical signal in IR optical systems. The package is written in C/C++. Quality online help and free technical support are provided.

MacStorm Sewer 3.0
Storm sewer analysis program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

MacStorm Sewer aids in the analysis and design of storm sewers. It computes flows to storm sewers by the rational method using the Florida Department of Trans-

These Products Available Through Bottom Line Distribution
1-800-347-1923

portation (FDOT) rainfall intensity curves or Hydrograph methods. Flows are computed from inputted areas and time of concentrations. The hydraulic gradient is computed by analysis of pressure and open channel flow regimes based on the physical conditions of a given sewer system. Output from the program can be displayed identically to the typical FDOT storm sewer tabulation form with all pertinent information calculated and shown. The combination of menus and data input allows for efficient operation in designing a system. MacStorm Sewer creates a DXF file for drainage structures and profiles based on entered data from the tabulation sheet. Structures are labeled and sized according to physical characteristics of the storm sewer system.

Magnetic Core Data Conversion Software Mark VI
Creates and stores core data files for use in future designs with FileMaker
Macintosh 512K or larger; Microsoft Basic.

Magnetic Core Data Conversion software is designed for use with the two other software programs, Flyback Converter Magnetics Design and Specialty Design Magnetics. Magnetic Core Data Conversion creates and stores core data files for use in future designs. It was created primarily to augment the other four programs and to assist users in keeping up-to-date with the latest magnetic core conversion data for all newly manufactured cores and special cores that are not found in the book Magnetic Core Selection for Transformers and Inductors. The program can be used to design new core configurations for applications that require odd shapes or minimum space. This program guides the user through the design process with step-by-step instructions in a series of menus, prompts and error messages making the program easy and flexible, even for the inexperienced microcomputer user. This program incorporates nesting and sorting routines that are used to consolidate all similar cores into a single file. They can be nested and sorted by manufacturer and type. After the cores are sorted, an engineer can use the Print program to obtain a hard copy of the data that is listed in the file. The hard copy can be used for quick reference when designing magnetic components. Programs available in this package include: EI & EE Laminations; DU & L Laminations; MPP Powder Toroids; UU & UI Ferrites; EI & EE Ferrites; Toroid Ferrites; EC Ferrites; Cased Toroids; Caseless Toroids; Pot Cores; C Cores; and Sample Computer Printouts.

Mapo
HPGL and DXF to EPSF file conversion
Macintosh Plus; HD20.

Mapo is a program for technical, industrial and scientific manual use. It converts HPGL and DXF files into EPSF files so that CAD results can be printed instead of plotted. The definition of printed drawings depends only on the LaserWriter in use. Depending on a user's needs, the converted drawing can assume different dimensions from the original drawing. This occurs by either specifying the reducing or enlarging ratio in regards to the original drawing, or by defining in millimeters the maximum x or y dimension of the wished drawing (the other dimension will be proportionally determined). Mapo recognizes all kinds of text. It converts in batch and, under MultiFinder, in the background. Colors are defined both through RGB and CMYK and can be selected or changed by a user. Thickness can be set using letter press parameters. Other characteristics include: LineCap and LineJoin of lines; number of pens increased to 32 selections; selective translation through the number of the pen; and conversion of text in the font selected by a user. Mapo is System 7 compatible.

Mathematica Help Stack, Version 2.2
Online Mathematica help system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; HyperCard or HyperDA.

The updated Mathematica Help Stack documents the latest release of Mathematica Version 2.2. This comprehensive new release of the Help Stack categorizes and cross references all Mathematica commands. If users don't know the name of a function, the Help Stack will direct them to the command they need. For example, by clicking on the button labeled "Graphics 3-Dim," users will see all the three-dimensional graphics commands. In addition, there's a card for each command that gives users a clear description of how it works. The Help Stack features easy-to-follow icons, detailed explanations and clear examples.

Matlab 4.0
Numeric analysis, matrix and sparse matrix computation, signal processing, graphics and other functions
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM.

Matlab is a high-performance, interactive numeric computation and visualization environment that combines the advantages of hundreds of pre-packaged advanced math and graphics functions with the flexibility and extensibility of a high-level language to customize and add new functions as needed. Matlab combines numeric analysis, matrix computation, sparse matrix computation, signal processing, two- and three-dimensional graphics and other functions with a user interface where problems and solutions are expressed mathematically without the need for traditional programming. Matlab application toolboxes extend the power of Matlab by providing users with leading-edge algorithms and functions developed by renowned experts in digital signal processing, control system design, neural networks, system identification, statistics, image processing, dynamic system simulation, chemometrics, optimization and other application areas.

Matlab Chemometrics Toolbox
Chemometric quantitative analysis
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Matlab Chemometrics Toolbox is a collection of functions for developing and evaluating the calibration matrices used in chemometric quantitative analysis. The toolbox may be used with any type of chemical or physical data. Common applications include spectroscopy, chromatography, electrochemistry and wet chemistry. The package provides Multiple Linear Regression routines for producing K-, P- and Q-matrix calibrations and for establishing calibrations using Factor Analysis (Principal Component Regression) and Partial Least Squares in latent variables. The toolbox consists of routines that implement various statistically-based calibration methods that have become accepted as standard chemometric techniques. The Chemometrics Toolbox is delivered as Matlab M-files, enabling users to see the algorithms and implementations, as well as to make changes or create new functions to address a particular application.

Matlab Control System Toolbox And Matlab Robust-Control Toolbox
Control system design and analysis
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Control System Toolbox works with Matlab numeric computation software to provide comprehensive functionality for control system design and analysis. It includes "classical" transfer function and "modern" state-space control techniques, plus time-domain and frequency-domain responses, feedback gain selection and model properties calculation. The optional Robust-Control Toolbox adds advanced "robust" multivariable feedback design methods. Primary features include functions for LQG-based optimal control synthesis using loop transfer recovery and frequency-weighted methods; H2 and H infinity optimal control synthesis; singular-value based model reduction; and spectral factorization and model building. The Toolboxes are delivered as Matlab M-files, enabling users to see the algorithms and implementations, as well as to make changes or create new functions to address a specific application.

Matlab Optimization Toolbox
Performs minimization or maximization on nonlinear functions
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Optimization Toolbox is a collection of Matlab functions that implements the most widely used methods for performing minimization or maximization on general nonlinear functions. This Toolbox includes nonlinear minimization techniques, such as unconstrained and constrained minimization, minimax, nonlinear least squares and multiobjective and semi-infinite minimization. Functions for linear programming, quadratic programming, non-negative least squares and solving nonlinear equations are also included. The Optimization Toolbox is delivered as Matlab M-files, enabling users to see the algorithms and implementations, as well as to make changes or create new functions to address a specific application.

The MathWorks, Inc.; 24 Prime Park Way; Natick, MA 01760; 508-653-1415 or 508-653-2997 (fax)

Matlab Signal Processing Toolbox
One- and two-dimensional digital signal processing and time-series analysis
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Matlab Signal Processing Toolbox is a comprehensive collection of tools for analysis of signals and linear systems and for digital signal processing (DSP) algorithm development. It builds on the numeric and visualization tools in the Matlab technical computing environment to provide FFT and other transforms, FIR and IIR filter design, filter response and simulation, statistical signal processing, parametric modeling, waveform generation and specialized functions for communications, embedded real-time and multirate signal processing applications. The Toolbox provides integrated graphics for visualizing signals, spectra, spectrograms and filter or system parameters. The Signal Processing Toolbox is delivered as Matlab M-files, enabling users to see the algorithms and implementations, as well as to make changes or create new functions to address a specific application.

Matlab Spline Toolbox
Functions for the construction and use of piecewise polynomial functions
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Spline Toolbox contains a set of functions for the construction and use of piecewise polynomial functions. Authored by Carl de Boor, author of The Practical Guide to Splines, the Spline Toolbox implements the essential programs of the B-spline package described in the text. The Spline Toolbox is implemented using the Matlab numeric computation

software, ensuring accurate results, fast performance and portability. Most of the Toolbox functions are delivered as Matlab M-files, enabling users to see the algorithms and implementations, as well as to make changes or create new functions to address a particular application.

MBAR Multiple Basin Analysis & Routing
Hydrograph and flood routing analysis
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

MBAR is a computer model to aid in the design and analysis of storm water management facilities, allowing up to 50 basins interconnected within one simulation. It computes Santa Barbara Urban Hydrographs and SCS Unit Hydrographs. Rainfall distributions available for hydrograph computations include SCS Type II, Interim Florida modified, SCS Type B, South Florida and St. Johns River Water Management District, FDOT and Orange County. Flood routing analysis uses stage/storage curves and time/stage curves to effectively simulate a system. Interconnections of systems analyzed by computer computations through different structures, including round pipes, oval pipes, arch pipes, box culverts, weirs, stage discharge curves, weir with pipes and pumps. Outfall structure analysis applies open channel and/or pressure flow calculations, whichever is appropriate based on physical constraints within a system.

McCAD Classic Spice
Analog analysis tool
Macintosh SE/30 or larger.

McCAD Classic Spice is an analog analysis tool that provides a truly integrated environment. It has six basic windows (source, output data table, Spice output, graphics/schematics view, reduced view and library view) that display input data and output results, as well as editors that allow designers to quickly alter their design and re-simulate. Designers can simulate the following devices: resistors, capacitors, inductors, mutual inductors, transmission lines, diodes, bipolar transistors (BJTs), field effect transistors (JFETs), MOSFETs (Metal Oxide JFETs), independent voltage sources, dependent voltage sources, dependent current sources, simple sources, pulse sources, sinusoidal sources, piece-wise linear sources, single frequency FM sources and subcircuits.

Electronics and printed circuit-board design
Macintosh Plus or larger.

McCAD electronic design systems offer a choice of design environments with a wide range of system configurations tailored to the specific needs of a designer. McCAD modules take a designer through the complete design cycle — from Schematic Entry to Printed Circuit Board design to Fabrication.

Software solutions such as EDS-1 offer a single integrated design environment for a Macintosh II. Stand-alone systems, such as PCB-1, PCB-ST and Schematics, offer many of the features and capabilities of the EDS-1 system and can be used on smaller hardware configurations.

McCAD PCB-1 is a stand-alone software tool for designing, creating, editing and revising printed circuit board artwork. It is an economical, easy-to-use package recommended for those generating circuit board artwork only.

McCAD PCB-ST is a high-end circuit board layout package that integrates with the McCAD Schematics package. It is net list driven and has autorouting capability.

McCAD Schematics is an online, multipaging schematic capture package with libraries that integrates with the McCAD PCB-ST layout package.

McCAD Schematics-DS consists of the McCAD Schematics (3.2) package with an integrated digital function simulator. It also integrates with the McCAD PCB-ST layout package.

McCAD Gerber Translator converts any of the McCAD PCB databases into standard Gerber format for photo-plotting.

McCAD Gerber View is a "Universal CAD Bridge" that converts Gerber database files from other CAD systems into the McCAD PCB-1 printed circuit design database. Gerber plot files may also be viewed prior to actual photo-plotting.

McCAD EDS-1 (Electronic Design System) is an integrated bundle of software consisting of McCAD Schematics, McCAD PCB-ST and McCAD Gerber Translator.

McCAD EDS-2 is an integrated bundle of software consisting of McCAD EDS-1 with digital simulation added.

McCAD Tracker
Autorouter
Macintosh SE or larger.

The McCAD Tracker is an intermediate-level quality autorouter that fulfills the needs of PCB designers specializing in single- and double-sided PCB board layouts. The router incorporates multiple routing technologies, including some Push and Shove capabilities, and is intelligent enough to handle complex layouts with typical completion percentages from 90 to 100 percent, depending on user set parameters. The router is capable of routing a board in two layers that would require three or four layers on other Mac autorouting platforms. The router is PCB-ST/EDS compatible.
$1,195 retail
Vamp, Inc.; 6753 Selma Ave.; Los Angeles, CA 90028; 213-466-5533

McCAD Trail Blazer
Professional PCB autorouter
Macintosh SE/30 or II family; 2 MB of RAM.

Trail Blazer uses the principals of PUsh, SHove and Insert (PUSHI) to solve the difficult task of efficiently routing complex and dense printed circuit boards. Trail Blazer's Sweep Router concentrates on each routing area, individually, to find the optimum path for each connection. Because it devotes its full power to analyzing specific areas of the board in meticulous detail, it can complete the routing for a given area very quickly and then move onto the next area. The Sweep Router is supported by two major algorithms: Costed Wave Front and Shove. The Costed Wave Front analyzes routing paths in waves, from both the source and target of a connection. Once the ideal path is determined, the Shove algorithm takes over and moves aside obstructing routes. Other Trail Blazer algorithms include Multipass Heuristics (for certain patterns), Tackdown (for avoiding dense areas), Rip-Up and Re-Route and Jump (for moving routes past obstacles).

MetalMatch
Intelligent software for alloy characterization
Macintosh Plus or larger; 2 MB of RAM; 800K disk drive; System 6.0.4 or later.

MetalMatch identifies alloys by composition and identifies similar alloys that may be used for substitution. The program not only reduces necessary research time, but also provides a thesaurus of commercial alloys. MetalMatch identifies alloys and welding electrodes by composition. By doing so, it also identifies substitutional alloys, alloys with overlapping compositions and compositionally compatible alloys and welding electrodes. MetalMatch's database has more than 750 alloys, including carbon steels, stainless steels, aluminum alloys, tin alloys, nickel alloys, zinc alloys, magnesium alloys, alloy steels, tool steels, copper alloys, lead alloys, titanium alloys, gold & silver alloys, cast irons & steels and more.

Metri-Pak
Provides a systems solution to metrication
Macintosh 512K or larger; external disk drive or hard disk drive; Microsoft Excel 3.0.

Metri-Pak provides a systems solution to metrication. Some of its main features include: converts 400 units, 6400 counting prefixes, to SI Metric (and reverse); a special drawing conversion module (every type dim./tol. converted); the most popular ANSI/DOD approved metric fasteners; precision rounding per ASTM E-380, methods A and B; most used Limits and Fits is automated (enter size and fit number only); converts special values entered by formula, exponents, prefixes, etc.; metric drills and resulting hole sizes are looked up automatically; summary conversion sheets cover an entire drawing/document; and full drawing, hard and soft conversion, example with summary sheets. It is not copy protected.

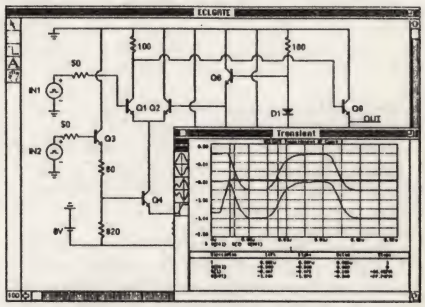
Micro-Cap IV
Integrated schematic editor and analog simulator
Macintosh II; 4 MB of RAM; hard disk drive.



Micro-Cap IV is an integrated schematic editor and SPICE-based analog simulator that provides an interactive sketch and simulate environment for electronics engineers. It blends a modern, window-based user interface with the robust and powerful numerical algorithms of SPICE to produce a fast, powerful and easy-to-use circuit simulator. Features include: integrated schematic, shape and text editor; online simulator available at a key press; familiar SPICE

Model-It!
Visual programming tool for dynamic systems modeling and simulation
Macintosh Plus or larger; System 6.0.4 or later.

Model-It! is a visual programming tool that can be used to model and simulate systems, algorithms and processes. Users can easily construct block diagrams, supply models with internally-generated or imported data, set up a simulation clock and watch the models run. Users can modify data and diagrams and have those changes validated and results updated as they work. Users can add plots and tables, formatted to their liking, and view the results. Applications include: simulate dynamic systems, solve differential equations, test algorithms, filter data sets, analyze processes, test and optimize designs, do what if analyses and perform general numeric processing tasks.

Moorsim
Comprehensive motion and load simulator for catenary-restored spread mooring systems
Macintosh Plus or larger; hard disk drive recommended.

Moorsim is a comprehensive simulation used for design, evaluation, maintenance and line failure analysis of catenary-type spread mooring systems. It provides detailed mooring line and vessel performance data under specifiable water depth and environmental conditions, including characteristic (r.m.s.) and peak mooring line loads in the forecast maximum storm. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions, an optional independent background swell, and steady or fluctuating wind and/or current. Spread mooring systems are characterized by extreme non-linearities at every phase of performance analysis; Moorsim accommodates these non-linearities at all levels, including system statics, quasi-statics and dynamics. Direct comparison of Moorsim's nonlinear dynamic load calculation with the quasi-static catenary calculation often used as an approximation is provided as an output option. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

MSC/pal 2
Performs three-dimensional stress and vibration analyses of structures, components and mechanical systems
Macintosh Plus or SE; 1 MB of RAM; hard disk drive; or Macintosh SE/30 or II; 2 MB of RAM (3 MB with MultiFinder); hard disk drive; math coprocessor.

MSC/pal 2 performs three-dimensional stress and vibration analyses of structures, components and mechanical systems. It allows an engineer or designer to reduce time in the design/analysis cycle through rapid iteration. The program will also increase the process or product's reliability while helping to reduce material and manufacturing costs. MSC/pal 2 will help an engineer to identify potential problems prior to fabrication and thus reduce the need for prototype testing. Graphics and text windows may be repositioned and resized. Graphics and text may be cut and pasted into other Macintosh applications for report generation. Graphical output consists of undeformed geometry, deformed shape, deformed/undeformed overlays, hidden lines, shaded stress and displacement contours and XY plots. In addition, the deformed shape may be animated. MSC/pal 2's extensive element library includes: straight and curved beams; solids; triangular plate elements; axisymmetric elements, 3-node ring and 4-node ring; plane stress and plane strain membranes; scalar springs, masses and dampers; and user-defined generalized mass and stiffness elements.

Multiframe3D
Structural engineering design and analysis
Macintosh Plus or larger; 2.5 MB of RAM; System 6.0.7 or later.

Multiframe is a structural engineering design and analysis system. Featuring fast, interactive graphics, Multiframe provides exceptional ease of use combined with powerful analysis capabilities. Advanced features include automatic generation of structures and rendering and animation of deflection and stress diagrams. A complete library of AISC sections is included and may be customized for use with composite, concrete or timber sections. Multiframe is System 7 compatible, and supports Virtual Memory and the Power Macintosh.

Multiframe4D
Three-dimensional static and dynamic structural analysis and design
Macintosh Plus or larger; 4 MB of RAM; System 6.0.7 or later.

Multiframe4D is a three-dimensional, static and dynamic structural analysis and design software system. Featuring fast, interactive graphics, Multiframe4D provides a completely graphical approach to structural modeling, analysis and interpretation of results. CAD tools like automatic generation, duplication and rotation of structural elements simplify the process of constructing a frame model. Multiframe4D utilizes rendering, animation and color overlays to highlight critical areas of the structure after analysis. Dynamic modes of vibration can be visualized using a combination of color rendering and QuickTime-compatible animation. Analysis options include springs, prescribed displacements, factored load cases, automated self weight and thermal loading. User-defined reports can be previewed on screen prior to printing. It comes complete with a database of common U.S. and international structural shapes.

NeuroLab v1.0
Neural network library for Extend
Macintosh Plus or larger; 3 MB of RAM; 2 MB of free hard disk space; Extend 3.0; System 6.0.5 or later.

NeuroLab is a neural library for Extend (a graphical icon-based simulation program) and is a powerful and effective tool for understanding, designing and simulating artificial neural network systems. NeuroLab consists of more than 60 functional blocks and 20 example models. Each functional block in NeuroLab is easy to use and understand because of the intuitive appearance and the interactive dialog box of each block. Implemented neural networks are Hopfield, perceptron, competitive, recurrent, context, feature map, Boltzmann machine and multilayer feed-forward networks. NeuroLab is applicable in any field where nonlinear mapping and adaptive capability are integral parts of problem solving. Major applicable fields are image processing, data classification, future prediction, adaptive control, dynamics identification optimization and content addressable memory. NeuroLab is an ideal tool for educators and engineers who would like to explore the power of neural networks.

Pulley Designer
Mechanical engineering application
Macintosh Plus or larger.

Pulley Designer is a mechanical engineering application for the design and procurement of large bulk material conveyor pulley assemblies. It employs an easy-to-use graphics interface for entry of belt tensions and dimensional data and permits user selection of steel, lagging, journaling, etc. The program automatically creates bill of materials. It also creates a fully dimensioned A-sized mechanical assembly drawing with bill of materials suitable for procurement and plant maintenance book use. Special functions are included to optimize component commonality within a project or plan. It adheres to CEMA and MPTA design standards.

ReOpt
Reviews possible environmental remediation technology options
Macintosh II or larger; 5 MB of RAM; high-density floppy drive; 12 MB of hard disk space; 13-inch color monitor.

ReOpt is a Windows/Macintosh-based software system that reviews possible environmental remediation technology options based on user-specified site characteristics. ReOpt provides summary information for each of 88 remediation technologies, covering nearly 700 contaminants, including technology descriptions, design parameters, contaminant applicability, references and previous applications. Developed by Battelle's Pacific Northwest Lab for the Department of Energy, ReOpt is licensed for commercial distribution by Sierra Geophysics.

RetainWall
Retaining wall design software
Macintosh Plus or larger; two 800K disk drives or hard disk drive.

RetainWall calculates a complete analysis and design based on ACI 318-89 and UBC '91. Poured concrete and/or masonry block may be used. RetainWall gives users several options for sizing of rebar. Users can enter steel size, spacing, both or neither. It automatically calculates whichever values are not entered. RetainWall has incorporated all the load cases required by ACI and UBC. Users may use these cases, turn some or all of them off and/or create their own. Any number of active and passive pressures, surcharges, stem axial loads and horizontal point and distributed loads can be applied to the wall. All input and output values and graphics may be printed at any time. In addition, graphics can be saved in PICT and DXF formats for use in virtually any drawing program. Text values can be saved as a text file for easy export to spreadsheet, word processing and page-layout programs.

RFDesigner
RF/microwave design tool
Macintosh Plus or larger.

RFDesigner is a powerful RF/microwave design tool that provides physical and electrical structures, all standard RF components and math models, which can simulate almost any real circuit behavior. The program features effective analysis and optimization with s-parameter interpolation and built-in parasitics for all components. Gradient and random optimizers and statistical "yield" prediction work simultaneously with any number of components and with independently assigned tolerances to all components, including s-parameters. The smart editor environment with programming language provides guided file creation and editing and flexible single and multifile management and processing. The graphs are displayed simultaneously with calculations and can be directly printed in high quality. Time domain response is generated from s-parameter data.

RFLaplace
Electromagnetic simulator tool
Macintosh Plus or larger; MiniCad+.

RFLaplace is a versatile electromagnetic simulator for uniform TEM mode structures. Vector plots of electric and magnetic fields, equipotential contours, density plots of power loss and surface current can be resized, scaled and superimposed in the MiniCad graphical environment for easy visualization of single and coupled transmission line properties. Dielectric loss tangents and finite metal conductivities are included in the computation of even and odd mode characteristic impedances, velocity factors and line attenuations. Unloaded Q and length of resonator constructed using a quarter line length of the specified cross-section are also available. Typical applications include design of single and coupled transmission lines, analysis of unconventional transmission lines, resonator design, crosstalk and coupling analysis among circuit board traces and multiple twisted pairs.

Ingsoft, Ltd.; 213 Dunview Ave.; North York, Ontario, Canada M2N 4H9; 416-730-9611 or 416-733-3884 (fax)

RFSynthesist
RF/microwave circuit synthesis program
Macintosh Plus or larger.

RFSynthesist is an RF/microwave circuit synthesis program that works independently or as a part of the RFDesigner product line. It generates RFDesigner run-ready files and schematic diagrams for DesignWorks. The program includes: filter synthesis (Butterworth, Chebyshev, elliptic, coupled resonators); synthesis of microstrip line physical dimensions from characteristic impedance; calculation of transmission line characteristic impedance and velocity factors from physical dimensions (for microstrip, stripline, coaxial, two-wire, wire over ground, wire in square shield, coplanar waveguide); and calculation of coupled transmission line odd- and even-mode impedances and velocity factors from physical dimensions. The program environment features include a context-sensitive online manual, pop-up and tear-off menus, floating tool palettes, modeless calculation windows, text editor with search and a report window with page-layout capabilities.

Roark & Young On TK 2.0
Computerized version of text book
Macintosh 512K or larger.

Roark & Young on TK is a computerized version of the text book "Roark's Formulas for Stress and Strain," by Warren C. Young. Based on the sixth edition, this application covers the entire range of problems from Roark's book, which includes a collection of 37 tables, more than 1,300 cases and more than 5,000 formulas. This application utilizes a sophisticated menuing system developed by Universal Technical Systems, Inc. (UTS). The UTS Menuing System allows users to easily locate, load and merge any of the desired cases. Users can quickly plot the results and analyze many different design alternatives in minutes.

RUN Assistant
Electronic design system
Macintosh LC or larger; 5 MB of RAM; hard disk drive; System 6.0 or later.

With RUN Assistant, it is formula's desire to offer a solution to the customer for who the RUN EDS is too powerful and who is looking for a system that is still excellent, but more affordable in pricing. RUN Assistant shares its basis with RUN EDS and uses its innovative capabilities for interactive work. For example, an arbitrary number of worksteps can be undone or redone with a click of the mouse. Significant improvements have been made to allow forward- and back-annotation with Real-Annotation in real time, not only supporting pin- and gate-swap, but also any other global project changes. The online test of the database is used to check and keep up the netlist information. Faulty nets will be highlighted instantly, which makes final batch testing redundant. The library uses an integrated approach (like RUN EDS) where schematic symbols and packages are displayed on a worksheet and consistency between the different views is immediately checked and displayed.

RUN Electronic Design System
Automated design of electronic circuits and printed circuit boards
Macintosh LC or larger; 5 MB of RAM; hard disk drive; System 6.0 or later.

RUN EDS is an integrated program for the automated design of electronic circuits and printed circuit boards. The RUN products are developed by engineers with long CAE experience on PCs and workstations in close cooperation with the electronic design industry and PCB manufacturers. It runs on a Macintosh computer with its well-designed user interface, graphic and networking environment. The design begins with the schematic capture where the support of hierarchical design (top-down and bottom-up) enables developers to break down extensive projects into smaller modules. Significant improvements have been made to allow forward- and backward-annotation with REAL-Annotation in real time, not only supporting pin- and gate-swap, but also any other global project changes. A management for free attribute handling is used to interface to analog and digital simulation tools and logistics. For analog and high-frequency designs, support for Bezier curves for contours and signal traces has been implemented.

SALMsim
Comprehensive motion and load simulator for riser-buoy-yoke Single Anchor Leg Mooring systems
Macintosh Plus or larger; hard disk drive recommended.

SALMsim is a comprehensive simulation used for design, evaluation, maintenance and failure analysis of riser-buoy-yoke type single-point mooring systems (SALMs) with an attached storage vessel. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions, an optional independent background swell and steady or fluctuating wind and/or current. Integrated simulation modules compute static, low-frequency and wave-frequency behavior of the vessel and its associated mooring structures. Emphasis is on estimation of characteristic (r.m.s.) and storm peak motion and load values at any point in the system for a particular wind, wave and current environment. Effects of finite water depth are fully simulated and either English or metric units may be selected for vessel specification and data output. Output is in the form of amplitude and phase of Response Amplitude Operators (RAOs) and/or statistical characterizations of vessel and mooring system motion and load response to irregular wave conditions. Capabilities for analysis of free SALMs in arbitrary environmental conditions are incorporated. Full accommodation of square-law hydrodynamic driving and damping forces acting on the mooring structure is provided. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

Sauna
Thermal modeling
Macintosh SE or II.

Sauna is a three-dimensional thermal analysis program with integrated color graphics. Users can model circuit boards, plates, heat sinks or entire enclosures, using all heat transfer modes: convection (natural or forced air), radiation (blackbody or gray) and conduction. Seconds later, using Sauna's advanced solver, users will have predicted a complete set of mode, case and junction temperatures. It is interactive menu driven with powerful edit features, making it easy to learn and use for what-if design modification evaluations. Its thermal parameters library includes material properties, semiconductor package design values, mounting method parameters, the effect of altitude or pressure on convection, etc. Hard copy output interprets color plots into a gray scale.

Sauna Modeling System provides even greater modeling power for tough thermal analysis problems. It will not only do macro thermal analysis of the more common electronic configurations, but also has the capability to model just about any type of design: potted modules, heat sinks in "H" and "T" configurations and the prediction of junction-to-case thermal resistance are all possible.

Semisim
Six degree-of-freedom wave-frequency semisubmersible motion simulator
Macintosh Plus or larger; hard disk drive recommended.

Semisim is a six degree-of-freedom wave-frequency motion simulation package for use with semi-submersible vessels in the non-transit, hulls-submerged mode. Computed response characteristics reflect the highly nonlinear nature of motion damping and excitation for this type of vessel. Features include efficient input of column and hull forms based on the use of simple geometrical shapes, permitting quick specification and easy modification of the underwater configuration for comparative performance analysis and evaluation. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions and an optional independent background swell. The simulation provides for calculation of air gap clearances between deck and water surface in addition to absolute displacements, velocities and accelerations at any point on the vessel. Effects of finite water depth are fully simulated and either English or metric units may be selected for vessel specification and data output. Output is in the form of amplitude and phase of vessel Response Amplitude Operators (RAOs) and/or statistical characterizations of vessel response to irregular wave conditions. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

Shaft Alignment 2.51
Determines how to correctly position shafts of industrial rotating machinery
Macintosh Plus or larger; 1 MB of RAM.

Shaft Alignment helps users determine how to correctly position the shafts of rotating machinery to achieve a colinear axis of rotation when the machinery is running under normal operating conditions. The program uses a variety of visual aids to assist users in understanding the step-by-step process required to align rotating machinery properly. Users can enter names of the machinery, the axial dimensions of the drive train, data on how the machinery moves from offline to running conditions and the direction of this movement. Other items that can be input include the selection of three different types of dial-indicator shaft-measurement techniques and field readings taken with one of these techniques. Users can then see how two shafts are oriented with respect to each other, choose from an infinite number of possible solutions to achieve the required machinery position and print any or all of the above information. Data from lasers and other systems may also be entered. The Shaft Alignment Handbook and Basic Shaft Alignment Workbook are included.

Shipsim
Six degree-of-freedom wave-frequency motion simulator for displacement-hull vessels
Macintosh Plus or larger; hard disk drive recommended.

Shipsim is a general-purpose six degree-of-freedom wave-frequency vessel motions program specifically enhanced for displacement-hull vessels with relatively large block coefficients. Vessels in this category include drillships, barges and tankers. Shipsim utilizes an efficient algorithm for calculating wave-frequency forces and moments which permits accurate simulation using as input only gross hydrostatic and mass properties, eliminating the need for tedious and error-prone input of vessel lines details. This typically permits comprehensive simulations to be completed in one hour or less. Non-linear effects, particularly in the roll degree of freedom, are fully simulated, leading to realistic roll response predictions that depend on details of bilge geometry. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions and an optional independent background swell. Accelerations, velocities and displacements at any point on the vessel can be computed. Effects of finite water depth are fully simulated and either English or metric units may be selected for vessel specification and data output. Output is in the form of amplitude and phase of vessel Response Amplitude Operators (RAOs) and/or statistical characterizations of vessel response to irregular wave conditions. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

Signal Analyzer/QT
Provides speech, audio and acoustic analysis routines
Macintosh II family.

Signal Analyzer/QT provides a wide range of speech, audio and acoustic analysis routines, as well as full QuickTime support, enabling users to construct video and audio "animations" with engineering data. Signal Analyzer/QT with a DSP board enables any Macintosh to become an authoring system. In a typical application, a user might be sampling sonar or audio signals and displaying the frequency components in real time via one of Spectral Innovations' 3-D color displays. Now with QuickTime enhancements and one of Spectral's DSP boards, these displays can be compressed and saved on disk as a QuickTime movie for subsequent playback on any QuickTime–compatible machine. QuickTime compatibility also enables users of Signal Analyzer/QT to embed data movies into other QuickTime-savvy applications, such as spreadsheets, word processors and multimedia presentation tools. The product is intended for researchers and engineers who need to share data and results across workgroups.

SimpleSpan Utilities I
Beam analysis desk accessory package
Macintosh 512K or larger.

SimpleSpan Utilities I is a disk containing two structural design desk accessories for architects and engineers. SimpleSpan and BackSpan enable a user to analyze and select sizes of simply supported or cantilevered wood beams. Using framing lumber, laminated veneer lumber or steel beams, the software will analyze shear, deflection and bending, and calculate the required beam size. Features include the ability to revise or delete individual loads, set user options and review beam calculations. New features of SimpleSpan 2.5.1 and BackSpan 2.0 include the ability to print a summary report of the calculations in any font, or the same report can be saved as a text file to be archived on disk or imported into a spreadsheet. Steel stress values can be entered by users using less common steel grades. Joist spacing can be adjusted independent of the loading conditions. In addition, SimpleSpan has been upgraded to size rough-sawn lumber and draw shear & moment diagrams in its analysis window.
$145 retail; includes SimpleSpan 2.5 and BackSpan 2.0

SINDA/G
General purpose thermal analyzer
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; Absoft's Fortran.

SINDA (Systems Improved Numerical Differencing Analyzer) is a general purpose thermal analyzer used by NASA centers and many aerospace companies. It can be used to create thermal models and predict temperatures and heat flows for a wide range of problems encountered in industries, such as electronic, automotive and aerospace. Through user-written Fortran subroutines, complex phenomena can be modeled. A HyperCard graphics interface is used to control the program. A comprehensive tutorial guide to thermal modeling is included, which teaches thermal modeling techniques using numerous examples and comparisons with analytical solutions. The Macintosh version is not a subset, but the complete SINDA/G (formerly SINDA/1987/ANSI) program.

Softgage 2.0
Software to replace Positional Functional (metal) Gages and analyze N/C machine precision
Macintosh 512K or larger; external disk drive or hard disk drive; Microsoft Excel 3.0.

Softgage is a productional program that can be used to verify feature locations in lieu of a (hard) positional functional gage when used in conjunction with an X, Y Coordinate Measuring Machine (CMM). The program is meant to be a workable solution for the composite positional verification of holes or studs/pins. Measurements taken from any origin may be translated to determine their acceptability by the computer. Although designed for ease of use, Softgage contains many sophisticated transparent routines, such as least squares, strategic decision making, vector-seeking optimization, slope/distance zone-envelope testing, hand tweaking and more. Softgage includes an interactive graph of actuals verses basics (locations) and color-coded cells. The program is not copy protected.

Specialty I Design Magnetics Software Mark VI
Magnetic component design
Macintosh 512K or larger; Microsoft Basic.

Specialty I Design Magnetics simplifies the design of such magnetic components as forward converters, three-phase transformers, DC inductors with a given DC resistance and single winding mag-amp design. Specialty Design Magnetics can quickly pick up files generated by FileMaker to minimize design turnaround time. The program can stand alone or be used in conjunction with Magnetic Core Data Conversion. Programs available in the package include: Single Ended Forward Converter Design; Single Coil High Frequency Mag-Amp Design; DC Inductor Design Using Iron Alloy and Ferrites; Three Phase Design Using Iron Alloy and Sample Computer Printouts.
$110 retail; no charge for updates
KG Magnetics, Inc.; c/o Sherwood Associates; 2135 Huntington Dr., Ste. 201D; San Marino, CA 91108; 818-568-8443 or 818-568-8534 (fax)

Specialty II Design Magnetics Software Mark VI
Magnetic component design
Macintosh 512K or larger; Microsoft Basic.

Specialty II Design Magnetics simplifies the design of magnetic components. Specialty Design Magnetics can quickly pick up files generated by FileMaker to minimize design turnaround time. The program can stand alone or be used in conjunction with Magnetic Core Data Conversion. Programs available in the package include: Single Layer Windowing Inductor using Molypermalloy, High Flux, Kool Mu and Powdered Iron Cores; Common Mode Inductor Design using 2,500, 3,000, 5,000 and 10,000 Perm Ferrite Material; Ultra Low DC Current Inductor Designs using Ferrite Toroidal Cores; Resistor Trim (used mainly in power supplies to give selected resistors a min/max range); AC Inductor Design using Molypermalloy, High Flux, Kool Mu and Powdered Iron Cores; and 11 Magnetic Equations to use at the terminal.
$110 retail; no charge for updates
KG Magnetics, Inc.; c/o Sherwood Associates; 2135 Huntington Dr., Ste. 201D; San Marino, CA 91108; 818-568-8443 or 818-568-8534 (fax)

Specialty III Design Magnetics Mark VI
Magnetic component design
Macintosh 512K or larger; Microsoft Basic.

Specialty III Design Magnetics simplifies the design of such magnetic components as current transformers for high and low frequency using tape toroidal cores and ferrite toroidal cores. Included in Specialty III is fast laminations using EI, EE, DU, UI and 3 phase laminations. With this stored data, the engineer is only required to enter ratios of a square stack, such as 0.5 for a half stack or 2.0 for a double stack. Using this approach, the turnaround time is very fast. Each of the three laminations have a special input for non-standard laminations. The data can be entered in either English or Metric units. This new program with FileMaker will automatically nest and sort the cores for core geometry, then provide core data files for future designs.
$100 retail; no charge for updates

Spectrum
Frequency domain analysis
Macintosh 512K or larger (Macintosh II preferred).

Spectrum is designed for users who perform frequency analyses of data. It features a fast implementation of the Fast Fourier Transform algorithm. Spectrum has all of the necessary features, including plotting, to quickly and easily analyze the necessary data. It has the capability to present to an analyst a variety of displays and formats. Features include: can perform analysis on either a text file or a file composed of real numbers in the Mac format; has the capability of taking an FFT of various sizes, from 8 to 32,768 points; can perform forward and inverse FFTs; can read data from a multicolumn file; can write and output file in either a fixed or scientific notation; can simultaneously display the magnitude and phase of the data or just the

magnitude; has the capability to average any number of FFTs from the same data file; can perform windowing of data; can display data in linear or logarithmic manner; and more. Spectrum is System 7 compatible.

SpectrumWare
Dynamic signal analyzer virtual instrument
Power Macintosh or NuBus; 4 MB of RAM; System 6.0.3 or later.

SpectrumWare is a dynamic signal analyzer virtual instrument (VI) for Macintosh users. It features an easy-to-use GUI that simplifies the measurement of frequency response, power spectrum, amplitude spectrum, coherence, transient capture, cross spectrum and THD. Users can combine SpectrumWare and National Instruments dynamic signal acquisition boards for the NuBus computers in applications involving electronic filters and networks, audio frequency communications equipment, machine vibration, transducers, such as accelerometers and hydrophones, resonances in mechanical structures or acoustic tests. Other applications include the measurement of transient signals or the spectra of low-frequency signals such as speech or mechanical vibration. The SpectrumWare executable program was built using the company's new LabVIEW Application Builder. Once selected, SpectrumWare will load, execute and unload automatically. The source code for SpectrumWare can be edited with LabVIEW 3.0, so users can alter and customize it for their individual applications.
No charge with purchase of NB-A2100 and NB-A2150 plug-in boards
National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

SPMsim
Comprehensive motion and load simulator for catenary-restored turret-moored vessels
Macintosh Plus or larger; hard disk drive recommended.

SPMsim is a comprehensive simulation used for design, evaluation, maintenance and failure analysis of catenary-based single-point mooring (SPM) systems, including vessel-fixed turret systems. It provides detailed mooring system and vessel performance data under specifiable water depth and environmental conditions, including characteristic (r.m.s.) and peak mooring line loads in the forecast maximum storm. A wide range of environmental conditions is accommodated, including extensive built-in wave spectral types, azimuthal spreading of wave directions, an optional independent background swell, and steady or fluctuating wind and/or current. Catenary-based mooring systems are characterized by extreme non-linearities at every phase of performance analysis; SPMsim accommodates these non-linearities at all levels, including system statics, quasi-statics and dynamics. The simulation is especially useful for deep-water applications that are difficult to study thoroughly using conventional model-scale tests. Direct comparison of SPMsim's nonlinear dynamic load calculation with the quasi-static catenary calculation often used as an approximation is provided as an output option. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

Spring CAD
Spring design and drawing program
Macintosh II or larger; 1 MB of RAM; 12-inch monitor; System 6.0.4 or later.

Machine designers often cannot use simple springs from manufacturer catalogs and must resort to imprecise spring slide rules or tedious calculations. Spring CAD, the first spring design program for the Macintosh, is a highly-automated engineering tool that enables engineers to quickly develop and design a variety of mechanical springs. Numerous GUI windows simplify the process and most spring calculations are completed in only seconds. When a design is complete, a drawing can be automatically generated, ready for printing or faxing. Five spring types can be designed: compression, extension, helical torsion, beam and solid torsion. An extensive variety of hook ends is selectable for extension and helical springs. Material and wire size tables are built in or can be customized. Fatigue loading and stress constraints are selectable, and all computational data can be analyzed. Design data can be entered in numerous ways, permitting many what-if scenarios to be quickly explored.

SPW Engineering Package
Seismic data processing
Macintosh II, Centris, Quadra family or Power Macintosh; 8 MB of RAM; System 7.0 or later.

Designed specifically for the environmental and engineering market, the SPW Engineering System is a smaller replica of the complete SPW software package. This package is a low-cost/high-end processing package for use in shallow, high-resolution seismic reflection projects. All of the functionalities and controls available in the full SPW software package for analyzing and processing reflection seismic data are incorporated into the SPW Engineering software package. An upper limit of processing 48 traces per channel and 50,000 traces per data set defines the lone boundary differentiating the SPW Engineering package from the complete SPW package. Competitively priced to meet the demands of the environment and engineering marketplace, this SPW offers exceptional value.

Statmoor
Comprehensive static catenary-elastic multileg mooring system calculator
Macintosh Plus or larger; hard disk drive recommended.

Statmoor is a comprehensive static mooring analysis program for multileg catenary mooring systems. The program is used in design and analysis of complex single-vessel multipoint mooring systems and special applications including static response characteristics of most elasto-gravitational lines of importance to the offshore industry (towlines, reinforced coflex-type hoses, etc.). An analytically exact solution to the elasto-gravitational static response of mooring line elements is employed; these exact equations apply to arbitrary degrees of non-linearity in the tension-elongation characteristics for the mooring line elements, permitting analysis of strongly non-linear materials such as nylon and polypropylene. Extensive online default values for weight, strength and elastic properties of steel and synthetic mooring materials are provided to enhance efficiency in preliminary parametric design studies. The program supports spring buoys, clumped weights, sloping seafloor conditions and individually specifiable anchor depths. Output capabilities include both individual line characteristics and net restoring forces and moments associated with yaw offsets or lateral offsets in any direction.

Steel Designer
Steel code design and optimization
Macintosh Plus or larger; 2.5 MB of RAM; System 6.0.7 or later.

Steel Designer automates the checking of structures to steel codes of practice. It is integrated with Multiframe so that it can directly access the results of a user's analysis and carry out design checks. Steel Designer gives users control over all aspects of the design process: which clauses they want to check, what effective lengths they wish to use and how the output is to be presented. It also provides a set of design aids that let users search through the structure for particular design criteria and graphically highlight areas of interest. Detailed tables of stresses, deflections and forces for the whole structure or just a single member let users quickly and effortlessly determine the critical loading conditions. Steel Designer provides users with a complete range of output combining text, tables and diagrams.

StormWorks Basin Design
Creates hydrograph/routing models
Macintosh Plus or larger; Microsoft Excel 2.2 or later.

StormWorks Basin Design creates hydrograph/routing models of small basins and retention/detention structures. A Pond Volume template provides tools for estimating required storage, and calculates actual storage and a stage/storage regression model. A Routing template determines values for maximum storage, peak stage and primary/secondary spillway outflow. An inflow/outflow Hydrograph is produced automatically. Flexible design parameter input and fast recalculation facilitate what-if design scenarios. Full documentation and context-sensitive help are included. The program is System 7 compatible.

Sunset Laboratory Computer Interface
Data collection and control
Macintosh LC family, Color Classic, Performa 400 and 500 series and Quadra 605; System 6.0.7 or later.

The Sunset Laboratory Computer Interface is a Macintosh application for data collection and control using the AIB-LC interface board. The program allows for data collection and analysis and graphically displays the results. A major feature of the program is a real-time digital storage oscilloscope mode where data can be collected at a rate of more than 86,000 samples per second. Three analog inputs can be monitored, with all three having unique calibrations. Control of the analog output and four digital input/output lines is also possible. The program also allows background data collection for periods of a few seconds to several months.

SuperScope
Virtual instrument software
Macintosh Plus or larger; Finder 6.0 or later.

SuperScope converts a user's Macintosh into a powerful lab instrument capable of collecting, analyzing, displaying and storing data. It can collect data from any IEEE 488 instrument using one of IOtech's Macintosh IEEE interfaces. SuperScope has built-in support for IOtech's 16-channel, 100 KHz analog to digital converter, the ADC488. Through menu selections and on-screen controls, all of the capabilities of the ADC can be accessed. Collected data is placed directly on the Macintosh screen in a selected waveform display. No programming is necessary to perform complex scientific data collection and analysis. For manipulating data, SuperScope provides more than 40 analysis functions, including transcendental, statistical and DPS operations, such as FFT,

These Products Available Through Bottom Line Distribution

TFCalc
Thin film calculations
Macintosh Plus or larger; 1 MB of RAM.

TFCalc enables users to design and analyze optical thin film coatings. It computes the reflectance, transmittance, absorptance, phase-change, electric field and color of multilayer coatings consisting of dielectric and metallic materials. The software is also capable of optimizing a coating design to meet specific performance targets. The results may be printed as either graphs or tables, or stored in files for processing by other programs. The software comes with databases of optical constants that may be edited.

TK Solver Version 1.2
Problem-solving software
Macintosh 512K or larger.

TK Solver provides a mathematical problem-solving environment for engineers, scientists and financial analysts. It is a rule-based system that can be used as an algebraic problem-solving tool, a mathematical model builder and knowledge management system. The TK Solver program includes more than 70 built-in mathematical functions. Users can also create their own functions and routines using TK's built-in procedural language. TK comes bundled with a library of models and utilities for many different disciplines. It is fully System 7 compatible.

"Home-Use" TK offers current users of TK to get a copy for their home. To qualify, users must have a registered copy of TK at their workplace. This special version of TK has all the power found in the full version of TK.

Tolculator 4.0
Geometric tolerance, design, inspection and mathematical analysis per ANSI for engineering, manufacturing and inspection/quality personnel
Macintosh Plus or larger; external disk drive or hard disk drive; Microsoft Excel 3.0.

Tolculator is designed to automate geometric tolerance analysis and mathematical analysis, such as analytic geometry, trigonometry, mensurations, etc., per ANSI and ISO standards for design, inspection and quality personnel. It is used to design interchangeable parts and gages, perform probability studies and tolerance circuit studies, make predictions on hardware tolerances and do all manner of conversions, including metric. It also automates sampling, histograms and limits and fits. The program will analyze circularity (roundness); find the least squares center; analyze flatness, parallelism, straightness of elements or axes; find the center of a pattern; do shop math, sampling studies, figure bonus tolerances and allowables based on actuals vs. drawing requirements; provide international tolerance grades; pick standard drills and geometric tolerances based on feature size/machining method; do thermal compensations; provide gage sizes; convert screw sizes to diameters; and more. Tolculator includes interactive graphs, color-coded cells, C.G., compond angle and other new analysis modules. The program is not copy protected.

TopCAD
Two-dimensional CAD system
Macintosh II family; 5 MB of RAM.

TopCAD is a high-end two-dimensional CAD system. It provides users with 110 different drawing methods for constructing primitives. The command set of TopCAD contains more than 500 drawing, editing, attribute setting, selection and basic commands, and many more can be defined by a user. Drawing elements can be created using any other drawing elements. Several drawing aids simplify creating and editing drawings. Several methods can be used to add precise dimensions to any type of primitives, distances or intersection angles between them. Other features include: fully associative dimensioning; nest procedures and commands; input and output capabilities; and more.

Towsim
Comprehensive motion and load simulator for tug-barge-towline systems
Macintosh Plus or larger; hard disk drive recommended.

Towsim is a comprehensive simulation used for design, evaluation, maintenance and failure analysis of simple or composite towlines used in open-ocean tug-barge-towline systems. It provides detailed towline and vessel performance data for a particular tug-barge-towline combination under arbitrary water depth and environmental conditions, including characteristic (r.m.s.) and peak towline loads in the forecast maximum storm for a particular route. The analysis can be used to optimize towline characteristics in trip planning for a specific route/environment and is suitable for on-board real-time use in an advisory capacity for setting optimal towline scope and/or optimal tug heading during storm penetration or survival preparations. Characteristics of the towline, including mass and elastic properties of each element of a multi-element towline, are fully specifiable. The tug-barge-towline system is characterized by extreme nonlinearities at every phase of the performance analysis; Towsim fully accommodates these nonlinearities at all levels, including system statics, quasi-statics and dynamics. Direct comparison of Towsim's nonlinear dynamic load calculation with the quasi-static catenary calculation often used as an approximation is provided as an output option. Simulation is carried out in the frequency domain, resulting in short execution times and unambiguous predictions of statistical response values.

Ultimage
Image processing and analysis software for scientific applications
Macintosh Quadra; 4 MB of RAM.

Ultimage is an image processing and analysis software designed for scientific, engineering and medical applications. It offers a complete set of functions for image visualization and enhancement, frequency processing, mathematical morphology, shape measurements and densitometry analyses. Image processing feature functions provide for contrast enhancement, extraction of contours and directional edges, noise removal, detail attenuation or highlighting. Functions include histogram manipulations, spatial and frequency filters, operators, etc. Image analysis features provide for object thresholding, shape modeling, filtering, particle detection, counting, sizing and distribution. Object's measurements include area, perimeter, center of gravity, orientation, shape factors, intensity values and many more. Standard image formats are 8- and 24-bit TIFF and PICT; 8-, 16- and 32-bit gray-level formats can be imported. Library of functions for use with the LabView programming language optional.

Video VI
Image capture and analysis library for LabVIEW
Macintosh Quadra; 5 MB of RAM; LabVIEW.

Video VI is a library of functions for image capture, display and analysis for use with LabVIEW, graphical programming software from National Instruments. It allows users to download a video frame from a supported digitizer board into LabVIEW in the form of a 2-D array. TIFF files can also be loaded from disk. Images are displayed in a window in which users can select regions to analyze. Various color palettes can be selected to visualize the image. Text, graphics and

rulers can be overlaid in the image. The analysis functions of the library extract the coordinates and intensity of a point, the length and intensity profile of a line, the gray-level histogram and the area of selected regions. Any quantitative data is returned to LabVIEW where it can be further analyzed. Images can be saved in TIFF format and printed.

GreenLeaf Chemical Reporting
Farm chemical application program
Macintosh with 5 MB of RAM; 5 MB of free hard disk space.
GreenLeaf Chemical Reporting is a complete chemical application record keeping program. Features include: list of chemicals, including manufacturers, EPA numbers and warning signals; ability to add, delete or hide chemicals at any time; stores applications for numerous years (limited only by the available hard disk space); applications are stored by variety, block, field, crop, etc., and then by date; prints all applications, or just the one users want to see now; prints a report on all locations a particular chemical was used on; and prints a summarized report, or full report, which includes wind direction and velocity, sections, townships, ranges, comments, etc. The program has the ability to pre-draw the maps of crop locations (using a graphics program) and then import them to be included in the reports. Or users can print the report and hand-draw the map if they choose.
$295 retail
GreenLeaf Systems, Inc.; 1102 12th St.; Hood River, OR 97031; 503-387-2626

GreenLeaf Farm Accounting
Farm accounting program
Macintosh with 68030 or larger processor; 8 MB of RAM; 15 MB of hard disk space.
GreenLeaf is a cash basis integrated farm accounting program that includes Payroll, Accounts Payable, General Ledger, Division Accounting and Chemical Reporting. It calculates all payroll taxes for Federal, as well as all Oregon and Washington state taxes. Three custom taxes are available. Features include: user-changeable tax tables; crew payroll and daily tally sheets; keeps track of draws, calculates average wage per hour, prints checks, W-2s and W-3 information; simple checkbook functions, including bank reconciliation; division accounting; prints 1099 information; up-to-date financial reports; stores numerous years worth of data (no need to close at year end, just switch year and go on); date-sensitive reporting features (look up a check written to an employee in the prior year; match this year's income to last year's expenses); list of chemicals provided; complete with EPA numbers and warning signals; and the chemical program meets all national requirements.
$995 retail; demo is available (call for information on module purchase)
GreenLeaf Systems, Inc.; 1102 12th St.; Hood River, OR 97031; 503-387-2626

MacDepreciation
Depreciation schedule for farming software
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.
MacDepreciation was developed to enable individual farmers to record, calculate, review and evaluate depreciation schedules. The program utilizes the modified accelerated cost recovery system (MACRS) and allows the selection of either 150 percent declining balance or straight line methods for the half-year convention. MacDepreciation automatically evaluates the individual farmer's depreciation basis for the current year and will convert to the mid-quarter convention if conditions require it. A depreciation schedule is created for each new item entered. Selection of the item's class type is simplified by the inclusion of a radio button list describing common items, such as "autos," "light trucks" and "machinery." Upon choosing the appropriate class type, the item's depreciation length in years is automatically assigned. The item's description, date placed in service, type of schedule and depreciation amount are recorded and available for review. A farmer can review and print an itemized list of the depreciation items for a specific year or track the schedule for a particular item. A farmer can use the program to try what-if scenarios and make better informed decisions concerning purchases.
$390 retail; includes Panorama Direct
MacEssentials; 422 5th St. SE; Watertown, SD 57201; 605-886-2553, 800-658-3899 or 605-886-2739 (fax)

MacHorse
Horse management program for veterinarians, breeders and trainers
Macintosh Plus or larger; hard disk drive.
MacHorse is an information manager designed for horse farms, stables, veterinarians, breeders and trainers. The program allows users to plan a work schedule for the day, the week or next year, and permits looking back at last year's experience to improve performance. It also manages breeding information, farm resources, expenses and billing.
$750 retail
Dapple Computers; Rattlesnake Mountain; Union Mills, NC 28167; 704-287-8783

MacSchedule F
Profit or loss from farming software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.
MacSchedule F was designed to enable individual farmers to record, review and retrieve information on profit or loss from farming. It was patterned after the actual IRS Schedule F Form 1040 and features one form for entering or reviewing income and another form for entering or reviewing expenses. Category items entered and their totals, such as "Feed Purchased" or "Sales of Livestock," are available for review on demand almost instantly. Individual income or expenses can be recorded at any time throughout the year. Specific income or expense categories can be retrieved, examined and modified if necessary. Enterprise tracking can be done by sub-category labels. Printing is available for items from each schedule F category, such as "Chemicals" or "Gasoline, fuel and oil." Year-to-date analysis, which can involve thousands of calculations, takes only seconds and can be viewed on screen or printed. The results can be used for planning throughout the year or as a scratch copy for completing the actual Schedule F form at tax time.
$390 retail; includes Panorama Direct
MacEssentials; 422 5th St. SE; Watertown, SD 57201; 605-886-2553, 800-658-3899 or 605-886-2739 (fax)

Pied Piper
Helps farmers track pesticide spraying events
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later; Newton MessagePad; 1 MB PCMCIA; Connection Kit 2.0.
Pied Piper helps farmers track pesticide spraying events for later reporting to state and federal agencies. Users can track mixers, applicators/drivers, fields (with maps), crops and varieties, tanks, chemicals and formulae. Users enter the above chosen from pop-up menus, plus the date, time, temperature, wind velocity and direction appropriate for each spraying. At any time, users can specify queries to report a subset of sprayings. Optionally, users can choose to enter the data directly (also utilizing pop-up menus) into the Newton MessagePad version in the field. This data can then be loaded directly into the Macintosh for storage and querying, and the Newton can be set up with data exported from the Macintosh version.
$195 retail; Macintosh
$99 retail; Newton

Vertical Markets/Film & TV Production

AccuPrompt
Tool to create, organize and scroll scripts for live or commercial production
Macintosh with 68020 processor or larger; 1 MB of RAM; System 7.0 or later.
AccuPrompt is a comprehensive system for creating scripts, arranging them in run order and scrolling them for live teleprompting. Scripts can be viewed on a stand-alone Mac or any NTSC monitor for commercial production, corporate theater or television news production environments. AccuPrompt is advanced, yet easy to operate and offers a vividly clear prompter display and incomparable smooth scrolling text. Simple flexibility, speed and high degree of customization, AccuPrompt offers more text formatting options than any other teleprompting product. Operators can constantly monitor live scrolling text on screen with options of instantly editing scripts. WorldScript compatible, AccuPrompt can create and scroll scripts in any language. Other features include: global search and replace; multiple hot keys while prompting live; unlimited fonts by size and style; variable scrolling sensitivity; auto underscan/overscan compensation; supports XTND file translation; direct import capabilities from many Mac to DOS formats; dynamic time scales; fully networkable; and an integrated word processor.

Questar Systems; 1800 Water Pl., Ste. 100; Atlanta, GA 30339; 404-956-0700 or 404-956-8781 (fax)

After Effects 2.0.1
Motion graphics, video compositing and special effects software too
Macintosh II or larger (68030 processor recommended); Floating Point Unit; 4 MB of RAM (8 MB recommended); System 7.0 or later; QuickTime 1.6 extensions.
After Effects is a motion graphics, video compositing and special effects software tool for the Macintosh. It enables Macintosh users, video producers, broadcast designers and animation professionals to create superior-quality video productions. After Effects' unique key frame-based interface and powerful compositing capabilities make it the preferred application for professional-quality animation. After Effects 2.0 allows After Effects users to edit motion paths between key frames in the Composition window and unveils a new timeline view that is designed to display vital information that motion graphics professionals require. Traditional speed optimizations and a plug-in architecture created to take advantage of acceleration technologies that will speed up rendering and preview time.

The ASDG Abekas Driver
Gives users Abekas digital video tape capability
Macintosh with 8 MB of RAM; System 7.0.1 or later.

ASDG Abekas drivers allow users to read and write digital video tapes in the Abekas Digital Disk Recorder format. This software, along with an Exabyte EXB-8500 or EXB-8505 tape drive, enables users to: single frame record on inexpensive media in full D1 quality to a device that never shows drop-outs; make use of professional service bureaus, which can transfer Abekas digital video tapes to and from any other video format; and quickly and easily bulk transfer thousands of frames of NTSC or PAL video to and from a user's clients in the full color and resolution that D1 digital video allows (this can be raw footage users receive or the finished shots users deliver back to the client).

AudioVision
Digital audio editing
Macintosh Quadra 950.

AudioVision is a multitrack digital audio workstation to sync-lock digital picture with audio for fast, creative and precise audio editing. Integrated digital picture lets users assemble and play back audio tracks with unsurpassed speed and precision. Unlike traditional digital audio workstations, AudioVision gives users instant access to synchronized sound and picture. Because all source material — picture and sound — is stored on optical or magnetic disks, users have instant random access to any part of their program, any time. Completely intuitive and easy to use, AudioVision's graphical interface was specifically designed for the audio professional. Features include integrated digital picture, automated dialog replacement (ADR), Foley, film-style looping, auto-conform, a powerful workreel database, real-time multichannel input/output and more.

AutoActuals 4.0
Bidding and actualizing template
Macintosh Plus or larger; Microsoft Excel 3.0 or later; System 6.0 or later.

AutoActuals is an easy-to-use actualizing template for AICP producers who use Microsoft Excel. Users enter POs into the log and then select AutoActualize from the menu. Each AICP line item is totaled and pasted into a user's bidding template. The program includes a bidding template that displays the grand totals at all times. Powerful search and find features make it indispensable during production to keep track of actual expenses. It can automatically print a list of all searched matches, and can be used with any bidding template. AutoActuals was recently updated to include a timesheet module that computes and actualizes crew payroll as well.

CodiBoss Software
Controls the Chyron Codi character generator
Color-capable Macintosh; System 7.0 or later.

CodiBoss is a Macintosh-based application that offers complete control of the Chyron Codi character generator. CodiBoss windows offer a friendly WYSIWYG interface and intuitive menus and controls provide easy access to all Codi functions. With CodiBoss, users can create a sequence of messages using rolls, crawls and other transition effects. Sequences can also include flash effects and commands that control the on-screen digital clock. A single click on the Play button loads and plays the sequence. CodiBoss includes a built-in timer that can automatically play a user's sequence at any designated time and can repeat execution at any regular interval. Messages can be overlaid on live video or a custom background. CodiBoss allows users to use a unique color palette and background with each message. Users can also import text from any word processor. Commands are provided for downloading new fonts and PCX graphics to the Codi.

Comet/CG
Character generation and video titling software
Macintosh II or Quadra; 8 MB of RAM; System 7.0 or later.

Comet/CG represents a new approach to keying text and graphics over live video. More than just a character generator, Comet/CG is an innovative video publishing solution to display top-quality anti-aliased fonts and graphics suitable for the professional video and broadcast environments. With Comet/CG, users can control every aspect of their text, including font scaling, manual kerning, individual line leading, shadow types and video transparency. The flexible gradient editor can be used to create multicolor gradients and video transparency gradients. Users can combine all those options with video-oriented screen formats, like dual column credits, and will find that creating video titles has never been easier. Comet/CG lets users create motion paths with field rendering for high-quality anti-aliased animation of titles.

The Credits Database
A powerful, flexible film and credits research database
Macintosh SE/30 or larger; 8 MB of RAM recommended; 4th Dimension; PostScript printer recommended.

The Credits Database is delivered complete with data for all major releases since 1980; nearly 2,000 film records and 40,000 credit records (and the list keeps growing). It produces credit lists and film research reports with an easy-to-use report generator capable of handling complex queries. Users can store results of searches in built-in word processor and/or spreadsheet documents for incredible flexibility. The database uses Panolog's own Entertainment industry data, available by subscription. This product is for single-user use only. Customization is available.

Cue 3.05 — The Film Music System
Comprehensive software package for film composers and music editors
Macintosh Plus or larger.

Cue is a comprehensive software package for film composers and music editors. It automates every paperwork task and calculation that occurs in the process of creating sound and music that synchronizes to a picture. To score a film, a user must first create a click track that catches important events in the picture. Cue automates this task by having the Macintosh calculate click times for important visual events and decide on necessary tempo and meter changes, leaving a composer free to concentrate on the more creative side of film scoring. Cue has the ability to sync clicks, sound effects and MIDI files to a film's SMPTE track through MIDI Time Code. Cue lets a user trigger up to 40 MIDI events at specified SMPTE locations, each with an independent note value, velocity and duration. SMPTE lock also allows the input of cue points directly from videotape with a single keystroke. When using VITC (Vertical Interval Time Code), tape decks can be paused and cue points entered accurately directly to the computer. Another major feature of Cue is the ability to print customized score paper of up to 12 staves. Each system of staffs has a reference click track above it showing cue point information derived from the cue sheet. Cue will also print a master cue list and performing rights cue list for each project, customized with all stored information. Cue is System 7 compatible.

Opcode Systems, Inc.; 3950 Fabian Way, Ste. 100; Palo Alto, CA 94303; 415-856-3333 or 415-856-3332 (fax)

CVideo
Documents and locates scenes on video tapes and discs
Macintosh Plus or larger; System 6.0.4 or later.

CVideo is a powerful tool for cataloging and locating scenes on video tapes and discs. Coaches can review plays in games. Lawyers can prepare depositions for trial. Market researchers can analyze focus groups. Teachers can examine their performance. CVideo links any Macintosh computer to Sony VCRs and camcorders via an included Control-L (LANC) cable or, for timecode accuracy, to a Sony Vdeck. CVideo provides video control with simple keystrokes. A built-in word processor enables users to catalog and annotate each video scene. Start and end times can be attached to any paragraph automatically. With a simple mouse click, CVideo locates any scene within the video, by fast-forwarding or rewinding to the exact start time. Custom AppleEvents allow access to video capabilities from within any application. Users learn CVideo in five minutes or less, and never go back to controlling video by hand.

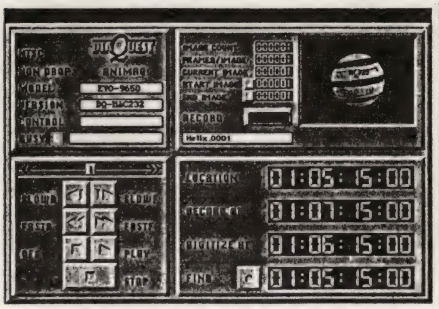
DQ-MAC232
Video controller for RS-232 controlled video recorders
Macintosh II or Quadra family.



DQ-MAC232 is a Macintosh software-only video controller for RS-232-controlled video recorders. It provides a lower-cost solution for frame-accurate Macintosh animation recording and digitizing. In addition to providing 100 percent frame accuracy, Diaquest also includes a full range of software interfaces to leading Macintosh graphics file formats and third-party graphics, animation and multimedia applications. These interfaces include plug-ins for Adobe Photoshop and compatible products, as well as X Objects for Macromedia Director and Three-D. DQ-MAC232 controls the Sony EVO-9650 Hi-8 animation recorder, as well as the popular laser disc recorders from Pioneer and Sony in NTSC and PAL video standards. Sequential frame digitizing and alpha channel compositing is available with the Digi-Comp option.

Edit-San
A/B Roll editing system
Color Macintosh with 68030 processor or larger; 4 MB of RAM; 2 MB of free hard disk space; serial port.

Edit-San was created to fill the need for a low-cost A/B Roll system that provides the professional features requested by most editors today. Edit-San is designed to operate with Sanyo's GVR-S950, a full-featured S-VHS editing VCR. From control of serial switchers and TBCs to program auto-assembly and edit decision list management, Edit-San has answered the demands of the current video editing marketplace. Edit-San lets users create tape logs right from the editing software, and then build edit decision lists directly from the tape logs. Users can actually auto assemble a rough cut right from their logs without doing any manual editing. The combination of Edit-San with three GVR-S950s make it a low-cost, high-featured A/B Roll editing system. Users can even import and export industry standard EDL formats.

Entertainment Industry Health & Safety Manual
Assists production companies in integrating a health and safety program into their daily operations
Macintosh Plus or larger; System 7.0 or later.

Due to new standards imposed by governmental Occupational Health and Safety organizations, it is highly recommended that all production companies implement and maintain an extensive, well structured health and safety program. In response to this new legislation, ESI has prepared the Entertainment Industry Health & Safety Manual. This manual has been specifically designed to assist production companies in integrating a health and safety program into the daily operations of their company. The whole package has been assembled by Entertainment Solutions into a computer program that contains all of the manual on one disk (more than 400 pages). The program is personalized to its owner and allows them to print multiple manuals and specific sections of the manual as needed. This makes it easy and inexpensive to post the required Cal/OSHA bulletins in as many places as the company is operating on any particular day. The manual itself facilitates in structuring the company's health and safety program. A comprehensive program ensures a company's good standing with regard to OSHA regulations and substantially decreases the likelihood of being levied heavy fines and, in some cases, facing criminal prosecution. The complete package consists of one copy of the program and one printed and bound manual.

$395 retail; computer program only
Entertainment Solutions, Inc.; 8700 Wonderland Park Ave.; Los Angeles, CA 90046; 213-656-5500 or 213-656-5589 (fax)

Entourage 3.2c
Database of theatrical agencies, movie stars, musicians, producers and more
Macintosh Classic II or larger; SuperDrive and hard disk drive (recommended); System 7.0 or later.

Entourage is a FileMaker Pro-compatible database of more than 500 theatrical agencies, 2,000 famous stars, musicians, producers, directors and writers. It lists celebrities' home addresses, along with agency business addresses and phone numbers. Also included are a host of entertainment industry organizations, industry magazines, catalogs, recording labels, film companies and miscellaneous contacts (both foreign and domestic) to aid the professional or aspiring screenwriter, actor, composer or entertainer. Multiple layout formats, scripts and online help are supplied within Entourage with automated buttons to facilitate ease of use. The database also uses color to group and differentiate information. Entourage is fully documented.

Envoy Digital Image Transporter
NTSC encoding and image transmission software
Macintosh SE/30 or larger; MultiBuffer DS-2.

Ensemble's Envoy software is used to seamlessly integrate computer graphics into NTSC Analog or D2 production work. The Envoy Digital Image Transporter performs precision numerical encoding of the image, producing the same high-quality result expected from expensive digital hardware encoders. The encoded image is then transmitted over a local area network to an image buffer in any of the MultiBuffer DS-2s in the facility. The DS-2's dual buffers allow simultaneous use of both video and alpha (or key) signals for graphics layering in analog, or digital production switchers. When the D2 output of the DS-2 is used, the entire path from the original graphic to D2 is entirely digital. Features and benefits include: computer is free after graphic is transmitted; works with a variety of graphics file formats; MultiFinder compatible for background transfers; and requires no special video board or graphics adapter. Envoy is System 7 compatible.
$5,200 retail; bundled with DS-2 Digital Image Store
Ensemble Designs; PO Box 993; Grass Valley, CA 95945; 916-478-1830 or 916-478-1832 (fax)

Fastbreak Event Management Software
Broadcast automation control
Macintosh SE or larger; 2 MB of RAM; 20 MB hard disk drive.

Fastbreak integrates a flat-file database with machine control, with primary emphasis on the Pioneer VDR-V1000 rewritable laserdisc recorder and its companion player, the VDP-1100. The software takes advantage of the dual-head design of the VDR, which allows Betacam-quality non-linear playback of Events recorded on the removable discs. Event Lists sequence the playback of spots, IDs, bumpers, promos, etc. The software manages the transfer of audio and video between tape and disc machines, and accepts daily Play List information in ASCII form from many popular traffic systems.
$4,950 to $14,950 retail; depending on software modules purchased
Sundance Technology Group; 6309 N. O'Connor Rd., Ste. 111; LB 128; Irving, TX 75039; 214-869-1002 or 214-869-1026 (fax)

FastCap
In-house closed captioning production tool
Macintosh Plus or larger.

FastCap is an in-house closed captioning production tool that offers fast, affordable broadcast-quality encoding by using Macintosh-based software. Developed by an online editor, FastCap has a built-in tape machine interface that enables frame-accurate, random placement of pop-on captions. Unlike most captioning software based on text editors, FastCap has a simulated TV screen set up like a character generator, allowing the captioner to actually see where the captions will appear. Other features include: importation of text files with automatic pasting or standard cut and paste, on-screen VTR controls with command key equivalents, automatic file back-up, automatic time calculations for caption displays and global "rippling" of SMPTE timecode information. FastCap requires the following peripheral equipment: line 21 encoder, videotape machine and a video monitor. FastCap requires continuous use of both serial ports.

FilmProfit
Tool for planning successful films
Macintosh Plus or larger.

FilmProfit is a dynamic computer program that comes with a User's Guide to Film Distribution, a text full of hard-to-get data and information. This package can quickly increase a user's knowledge about reaping profits from motion picture deals. Users simply fill in a set of screen-sized forms and generate on-screen and printed reports and charts. The reports and charts clearly show how fast a film pays off its debts, what portion of its revenues go to distribution fees and how revenues from the theatrical, home video, TV, cable, foreign and other markets stack up as percentages of its total revenues. Users gain quick control of the economics and timing of their distribution markets. Production advances, overhead charges, grants, gross participations, P&A, interest on advances/loans and much more are all clearly discussed in the Guide and calculated in the computer program.

Final Draft 2.0
Professional script writing software
Macintosh Plus or larger.

Final Draft is professional script writing software. It has complete word processing features, such as multiple typefaces, styles and sizes; headers; on-screen ruler; find and replace; spell checking; automatic pagination; import and export; and more. It knows the many formatting rules that must be followed when writing a screenplay: slug lines, action, character names, dialogue, etc., as well as where and when to break pages. All of this is done automatically as the script is entered, providing an effortless environment in which to write creatively and easily.

Frame2Frame
Editors' log and calculator
Macintosh Plus or larger; Microsoft Excel 3.0 or later; System 6.0 or later.

Frame2Frame is an editors' log and calculator for film/video productions. Uses enter feet and frame numbers of film shots, and Frame2Frame computes video time. The program computes and enters video minutes, seconds and frames onto a user's online log for any camera shooting speed. It also includes a calculator for video to film calculation. Designed by a commercial editor, Frame2Frame cuts online prep time, as well as online confusion by printing professional-quality logs.

Hitchcock
Professional non-linear video editing
Macintosh II or larger; 10 MB of RAM; 80 MB hard disk drive; System 7.0 or later; QuickTime 1.6.1 or later; JPEG-based video compression board.

Hitchcock is a software package designed for professional non-linear video editing, print-to-tape of JPEG video and offers EDL and QuickTime movie export. Hitchcock brings a complete random-access, disk-based editing system to the Macintosh platform — including full-motion (60 fields per second), full-screen (640 by 480) JPEG video, editable transitions and stereo digital audio. Hitchcock supports video professionals who want more to enjoy the benefits of a high-quality, non-linear video editing solution that works with off-the-shelf JPEG video digitizing boards.

IMTX 8000
Multimedia integration system that brings audio/video control to the Macintosh desktop
Macintosh II.

The IMTX 8000 is a professional-quality, personal computer peripheral for integrating audio and video equipment. It is a self-contained desktop video hub that incorporates full machine control, audio/video routing, audio mixing, sync generation and frame accurate SMPTE time code indexing. The video paths support broadcast-quality NTSC. The IMTX 8000 manages video signals from up to eight devices and five auxiliary sources, including the host computer. It also routes up to 24 audio signals through eight mix channels. The unit supports all standard variations of serial, parallel and Control-L equipment. Access to the system is via an XCMD library addressable from all Macintosh scripting environments: HyperCard 2.0, Macromedia Director, Authorware and SuperCard. A sample cuts-only edit stack is shipped with the product.

InMotion Machine Controller For Animation
Provides field accurate animation
Macintosh SE/30 or larger; Envoy Software; Multi-Buffer DS-2.

Field accurate animation is a snap with the InMotion Machine Controller for Envoy Software and Multi-Buffer DS-2. The fully digital path keeps animations transparent from creation to completion, Macintosh to video, making for great looking animation sequences. Analog output is also available. Field rate animation (as opposed to frame rate) gives users twice as much control as most other machine control options available. An incredibly smooth sequence with no jerky motion is attained because users can set the field rate as high as 60 images per second. All encoding, decoding and filtering is done digitally in software, which ensures a clean, transparent signal. Users don't need an extra video card and quality is not dependent on the resolution of the monitor. Transport control is built into the DS-2; no animation control board is needed. From the desktop, users select which VTR the DS-2 is serially controlling. InMotion Machine Controller supports PICT, PICS and QuickTime movies and is full 32-bit resolution, providing animation of both the video and associated alpha signal.

Lots A Plots
A wealth of ideas
Macintosh Plus or larger; HyperCard 1.2 or later; System 6.0 or later.

Lots A Plots is a wealth of ideas at a user's fingertips. Millions of one-liner stories are generated from the galaxy of ideas. Just click and a new story appears. It's a sure cure for writer's block. Users can add their own words to the lists of items used to create even more variations to the random stories. Users shouldn't be surprised if they see their favorite movie go by. The results can be heart-warming, funny, ridiculous and even hysterical.

Luna
Professional video post-production software
Macintosh II or Quadra; 8 MB of RAM; NuVista video-graphics card.

Luna video post production software creates a unique set of features in one convenient program, providing a variety of true-color 32-bit effects, video events and enhancements, all in real time. Luna real-time effects will give a user's video production effects never before available on a computer. Unique 32-bit color cycling, posterization, video noise threshold and strobe will give a user's video work an immediately visible boost in quality. Luna gives users all the advanced features needed for the highest quality productions at an affordable price for the cost- and quality-conscious video professional. Luna also ships with a 30-minute videotape documentation that demonstrates each feature, examples of the effects and how Luna can enhance a user's video productions, presentations, rotoscoping and animations.

■ Mac Video Poster
Creates and plays pages that can be used to deliver an advertising channel on a color TV or Macintosh monitor
Color Macintosh; System 7.0 or later.

Mac Video Poster creates and plays pages that can be used to deliver an advertising channel to be shown on a color TV or on a Macintosh monitor. Tools are available to set up multiple display pages that include PICT and Paint format pictures, flashing text lines, horizontal message crawl lines and standard text. Once created, pages may be played in continuous rotation. It is possible to create full-color product display catalogs. Mac Video Poster turns a Macintosh into a high-quality character generator with HiRes color graphics capabilities. Pages can be previewed and played individually or as a group. All Macintosh fonts and font sizes are supported. Symbols and fonts can be put in motion, allowing them to be moved across the screen when the page is displaying. Graphics from any program can be shown. A user-friendly page setup and design is fast and efficient. Each text line can have different letter and background colors. Text lines can be positioned anywhere on the screen, where they will flash or crawl or automatically center on the page. Pages can be played directly on TV using various resolution formats, including NTSC video when using any Macintosh with A/V capabilities. Pages can be updated remotely via modem with Apple's Remote Access program.
$495 retail; demo program and demo video VHS tape are available

Mac Video Titler
Video character generator
Macintosh II or larger; 1 MB of RAM; System 6.0.5 or later. For title creation and output, Mac Video Titler requires 5 MB of RAM; 32-bit QuickDraw; video output card.

Mac Video Titler is a software-based video character generator for the Macintosh. It provides an inexpensive tool for creating high-quality title graphics for video productions. Working with Adobe Type Manager and Apple TrueType fonts, Mac Video Titler creates fully anti-aliased titles over a solid background color or any PICT file as a background. It lets users select fonts, sizes, styles and colors on a character-by-character basis. Drop shadows with selectable shadow depth and color are also available. Mac Video Titler works with any NTSC or PAL video output card for the Macintosh, and supports resolutions of up to 768 by 576 pixels at either 256 or 16.7 million colors. Users can save title screens as highly efficient Mac Video Titler files and/or as finished PICT files ready for use in video production and editing. Mac Video Titler even comes with a built-in video graphics font that lets users draw lines, shapes and borders. Mac Video Titler comes with a site license so users can create title files offline, even on a Macintosh Plus.
$139.95 retail
McQ Productions; PO Box 1676; San Mateo, CA 94401; 415-348-1344, 800-659-4755 or 415-342-0199 (fax)

MacAnimator 2.1
Video animation controller
Macintosh II or larger; 1 MB of RAM; System 6.0.5 or later. For graphics output, MacAnimator requires 5 MB of RAM; 32-bit QuickDraw; video output card.

MacAnimator is a software-based video animation controller for recording QuickTime movies, PICS animations and PICT file sequences to video tape. It can also be used to perform frame-by-frame animation from other sources, such as a video camera mounted on an animation stand. MacAnimator works with any NTSC or PAL video output card for the Macintosh. It controls most D2, 1-inch, Betacam, MII, broadcast 3/4-inch or professional SVHS editing video recorders with an RS-422 serial remote control port and an internal time code reader. MacAnimator is easy to use: Users simply open a QuickTime movie, PICS file or the first in a series of numbered PICT files, enter a starting time code number and the number of frames to be recorded for each image and click the Start button. MacAnimator takes over, laying the animation across to video tape with no further effort on a user's part. MacAnimator comes with a cable to connect the Macintosh's modem port to the 9-pin remote port on a video recorder. If a VCR uses a parallel type remote port, as found on many "industrial" VCRs, MacAnimator can use both the CVNET control network from CV Technologies and the VLAN network from Videomedia. Both support a wide range of parallel-control VCRs.
$595 retail
McQ Productions; PO Box 1676; San Mateo, CA 94401; 415-348-1344, 800-659-4755 or 415-342-0199 (fax)

MacAnimator Plus
Video animation controller
Macintosh II or larger; 1 MB of RAM (5 MB of RAM and video output card for graphics output and rotoscoping); System 6.0.5 or later.

MacAnimator Plus is a software-based video animation controller for recording animation to video and performing frame-accurate capture of video to the Macintosh. It can record and create numbered PICT files, PICS files and QuickTime movies. It supports most RS-422-control editing video recorders, the Sony LVR-series laser videodisc recorders, the Sony EVO-9650 Hi8 recorder and the CVNET and VLAN networks. It can perform alpha channel overlay using background PICT images, capture video frames to full-

screen, full frame rate QuickTime movies and perform interactive and alpha channel rotoscoping over video. It also features a built-in colorbar generator. MacAnimator Plus provides an easy-to-use set of controls, along with the ability to follow animation scripts created with its built-in script editor for more complex jobs. It comes with a cable to connect the Macintosh's modem port to the remote port on the video recorder.

MagicScroll 2.0
Teleprompting program
Macintosh II, Centris 650, Quadra, PowerBook Duo or PowerBook 165/180; 4 MB of RAM; hard disk drive; System 7.0 or later.

MagicScroll is a teleprompting program for film, video and stage production. It outputs smooth scrolling, variable-speed videotext to any NTSC monitor through a required NuBus video card, Video Dock for Duos or external scan converter for PowerBook 165/180. Special prompter features include the ability to place up to 10 "bookmarks" or unlimited "paperclips" for quickly moving through large scripts. The "loops" feature returns the script to the beginning of a section for quick retakes. "Invert" allows for white letters against a black background on the NTSC monitor. An "output" switch sends "black" to the NTSC monitor for stage blackouts. For easy script editing and creation, MagicScroll includes Find/Find & Replace, Undo/Redo and "Save a copy in..." MagicScroll can add underlines, bold or italics to words or phrases to provide cues to the talent for emphasis. MagicScroll supports XTND translators, allowing you to open documents created in other popular word processors.
$3,300 retail; software only (an NTSC video card is required)
Magic Teleprompting, Inc.; 1390 Waller St.; San Francisco, CA 94117; 415-626-5283 or 415-626-2762 (fax)

Movie Magic Budgeting
Film and television budgeting program
Macintosh 512K or larger; two diskette drives or hard disk drive.

Movie Magic is a project-oriented estimating program that provides a budgeter with a method to create budgets. It is flexible enough to handle most any chart-of-accounts, as well as manage fringe benefits, foreign currencies and global changes. A library feature allows a user to build customized ratebooks. Entire accounts can be predesigned and stored in the library for instant recall. Movie Magic interfaces with several production accounting programs and can export entire budgets to Excel.
$595 retail
Screenplay Systems, Inc.; 150 E. Olive Ave., Ste. 203; Burbank, CA 91502; 818-843-6557 or 818-843-8364 (fax)

Movie Magic Scheduling/Breakdown
Movie scheduling and breakdown program
Macintosh Plus or larger; 1 MB of RAM; two disk drives or hard disk drive.

The Movie Magic Scheduling/Breakdown program allows users to display all of their information for a single breakdown sheet on screen simultaneously. Standard breakdown categories contained in the program include: Animal Handler, Cast, Costume, Extra Labor, Extras, Greenery, Livestock, Locations, Makeup, Mechanical FX, Miscellaneous, Music, Notes, Optical FX, Props, Security, Sequences, Set Dressing, Sets, Sound, Special Equipment, Special FX, Stunts and Vehicles. The program also features vertical or horizontal stripboard modes, color selection of on-screen stripboards, an optional bar code that can be printed at the bottom of each strip, sorting and printing of scheduling functions, viewable on screen or printed reports, an Auto-Save function, crash protection and more.
$695 retail
Screenplay Systems, Inc.; 150 E. Olive Ave., Ste. 203; Burbank, CA 91502; 818-843-6557 or 818-843-8364 (fax)

OZ Macintosh
Desktop video editing software
Macintosh II or larger.

OZ is a new generation in desktop video editing software for the Macintosh and Microsoft Windows. OZ makes professional-level video editing on the desktop accessible and affordable. OZ uses the industry standard V-LAN control network for frame accurate control of videotape/disc devices for cuts-only and A/B Roll editing and single frame animation. OZ incorporates Videomedia's "Park and Perform" philosophy of editing that allows users to edit by pictures and sound while the software performs the calculations. OZ sports a user-friendly screen interface designed by video editors for long periods of production. A feature-packed toolbox provides instant access to functions to speed editing. An on-screen comment window allows users to enter comments to describe each edit and later search by any word or phrase in the comment to access the edit. Video shuttle and jog control is provided via the mouse. Videomedia also offers the optional POD mini keyboard that enhances OZ editing by providing a traditional jog/shuttle knob, dedicated editing hot keys and a V-LAN transmitter. Optional video-in-a-window optimizes the application so all editing and video functions are performed on one screen. OZ supports a GPI trigger and provides serial switcher control of devices, such as the Newtek Video Toaster. The OZ/V-LAN team provides animation control plus video editing in one solution.
$1,295 retail; Version 2.10 (A/B Roll) software only
Videomedia, Inc.; 175 Lewis Rd., Unit 23; San Jose, CA 95111; 408-227-9977 or 408-227-6707 (fax)

PowerProduction Forms
Form templates
Macintosh Plus or larger; Microsoft Excel 3.0 or later; System 6.0 or later.

PowerProduction Forms are templates of commonly used forms in film and television production. Built as stationery in Microsoft Excel, all of the forms are easy to fill out and save for each production. Included are Call Sheet, Purchase Order Log, Petty Cash Advance, Per Diems, PC Summary, Travel Itinerary, Check Log, Booking Sheet, Flight Schedule, Overages and Payroll Recap.
$49 retail
PowerProduction Software; 2512 Curtis Ave., #1; Redondo Beach, CA 90278; 310-370-4793 or 310-370-2413 (fax)

RADIO (Random Access Digital Input/Output)
Offline, non-linear editing
Macintosh Classic or larger.

RADIO (Random Access Digital Input/Output) is an editing engine that brings random access, non-linear editing power to the Sundance System. Users can digitize more than an hour of video onto the internal hard drives, with two-channel CD-quality audio. The RADIO can be used in many ways: offline editing; final output with transitions; animation recorder; and "B-Roll" video/audio source. It takes advantage of Sundance's integrated logging/editing database management.
$15,950 retail; bundled with Q-CUT Video Editing Software
Sundance Technology Group; 6309 N. O'Connor Rd., Ste. 111; LB 128; Irving, TX 75039; 214-869-1002 or 214-869-1026 (fax)

■ **Radius StudioArray**
RAID storage subsystem
Macintosh Quadra 840AV, Quadra PDS or Power Macintosh 8100; QuickTime.

Radius StudioArray is a high-performance RAID storage subsystem designed specifically for Radius' QuickTime-based digital video editing and production. Optimized for use with VideoVision Studio, the StudioArray delivers unsurpassed QuickTime recording and playback capabilities. StudioArray makes the full power and flexibility of non-linear video editing on open platforms easily available to the professional user. StudioArray is designed for existing VideoVision Studio users and offers 4.0 GB of storage per module — accommodating up to 30 minutes of high-quality digital video information. The VideoVision Studio Pro Pak includes VideoVision Studio and Adobe Premiere and VideoFusion software applications. StudioArray employs a fast and wide SCSI-2 interface that markedly improves data throughput in the Macintosh environment.
$6,999 retail
Radius Inc.; 1710 Fortune Dr.; San Jose, CA 95131; 408-434-1010, 800-227-2795 or 408-434-6437 (fax)

■ **S/Link**
Provides batch transfer and on-the-fly sample rate conversion of digital audio sound files
Macintosh with 68020 processor or larger; 2 MB of RAM; System 7.0 or later.

S/Link is a utility for multimedia producers that provides fast batch transfer and on-the-fly sample rate conversion of digital audio sound files, as well as translation of EDL formats. S/Link supports the most widely used Macintosh audio standards — AIFF/AIFC, Open Media Framework (OMF) Interchange, PostPro, QuickTime, Sound Designer I and II and Synclavier. S/Link sports a simple, intuitive Finder-like interface. To copy files between devices, users simply drag and drop on the desktop. Typical Macintosh conventions like shift-clicking and region dragging are supported, allowing users to batch convert multiple files in a single pass, including such operations as: loading sounds from standard CD-ROM libraries directly into digital audio workstations; batch transfer and conversion of completed mixes into QuickTime files for multimedia authoring; batch conversion of sound files between different media; batch sample rate conversion (48 KHz, 44.1 KHz, 22.05 KHz and 11.025 KHz supported) and sample width conversion (from 16 bits to 8 bits and back); and exporting of sequences in CMX format to take advantage of third-party cue sheet software.
$199 retail
The Synclavier Co.; Rivermill Complex; Lebanon, NH 03766; 603-448-8887 or 603-448-6350 (fax)

Scriptor 4.0
Motion picture screenplay formatting program
Macintosh 512K or larger; two diskette drives or hard disk drive.

Scriptor is a text formatting program that takes a Microsoft Word or WordPerfect document and formats it according to the standard motion picture format. Features of the program include intelligent page breaking, automatic breaking of dialog including (more) and (Cont'd), scene and page numbering, remargination, top and bottom Continueds, A & B pages and scenes and more.
$295 retail
Screenplay Systems, Inc.; 150 E. Olive Ave., Ste. 203; Burbank, CA 91502; 818-843-6557 or 818-843-8364 (fax)

ScriptSupervisor Pro 2.1
Notebook, stopwatch and script notes report generator
Macintosh Plus or larger; HyperCard 1.2 or later; System 6.0 or later.

ScriptSupervisor Pro is designed for taking notes on the set of film and television productions. It is a notebook, stopwatch and script notes report generator all in one. Users click on the stopwatch, and ScriptSupervisor Pro enters the take number and the free-run time code. Take numbers are sequenced automatically. It can reset for false starts and handles takes within takes. Users click to stop the stopwatch, and the shot's running time is automatically calculated and entered into a user's log while the cursor waits in the comment field. Users can find any previous information instantly. Online help screens are provided. ScriptSupervisor Pro is compatible with portable printers for on-set finishing. It also prints production information cover sheets.
$499 retail
PowerProduction Software; 2512 Curtis Ave., #1; Redondo Beach, CA 90278; 310-370-4793 or 310-370-2413 (fax)

Scriptwriting Tools
Designed for writing screenplays and video scripts
Macintosh Plus or larger; Microsoft Word 4.0 or 5.0.

Scriptwriting Tools is a Microsoft Word enhancement package designed for writing screenplays and video scripts. It is especially beneficial to writers and producers working in the corporate/informational video industry. It works with Word 4.0, 5.0 and 5.1, and is System 7 compatible.
$79 retail
Morley & Associates; 120 E. 94 1/2 St.; Bloomington, MN 55420; 612-884-3991 or 612-888-2810 (fax)

ShowScape
Creates presentable, functional and professional scripts and storyboards
Macintosh Plus or larger; 1 MB of RAM (4 MB with System 7); hard disk drive; System 6.0 or later.

ShowScape software simplifies the composition of pre-production documents for film, video or any type of audio-visual production. Features include: automatic on-screen formatting to any industry format (broadcast TV, storyboard, screenplay); flexible formatting for existing documents (users can select any format at the start of any edit or print session — ShowScape automatically reformats the entire document); shot-unit document construction; keystroke shot-unit editing, including delete, cut and paste, copy and paste and insert new shots within the document; automated incorporation of graphics into shots on storyboard format; and multiple, interchangeable link files (video columns in dual-column formats, description/action files in screenplay format). Users select one or more to be collated with the script, shot-by-shot, for each edit or print session. Print options include with or without graphics, whole document or shooting script by shot numbers.
$429 retail
Lake Compuframes, Inc.; PO Box 890; Briarcliff, NY 10510; 914-941-1998 or 914-941-2043 (fax)

Sonic Comprehensive "Sound For Picture" System
SFP tools for dialog editing, effects lay-up and multitrack editing/mixing
Macintosh II or Quadra; 8 MB of RAM.

The Sonic Comprehensive "Sound for Picture" System provides a flexible assortment of Sound for Picture (SFP) tools. It is ideal for dialog editing, effects lay-up and multitrack editing and mixing. The system is expandable in groups of four tracks, which makes it easy and affordable to build a multitrack system. Combined with tools for EDL Autoconforming, Time Twist and Machine Control, the SFP system delivers the speed to help engineers meet the tough schedule of video sweetening and film post production.
$28,195 retail
Sonic Solutions; 1891 E. Francisco Blvd.; San Rafael, CA 94901; 415-485-4800 or 415-485-4877 (fax)

StoryBoard Quick 2.0
Visualization sketch pad for media production
Macintosh Plus or larger; hard disk drive; 1 MB of hard disk space; System 6.0.5 or later.

StoryBoard Quick is designed for directors, producers and creatives who want to visually communicate their shot ideas. Users just point and click and, faster than they can draw, they've created boards. With drawings at users' fingertips, characters and props can be instantly placed in the frame. Users can zoom, turn and crop characters in every frame, as well as add captions, script or camera notes. StoryBoard Quick also comes with a variety of backgrounds to set the mood for each shot. StoryBoard Quick allows users to create boards for television, feature film or wide-screen formats and prints professional graphics in a variety of frames per page. Pictures can be pasted from nearly all drawing, scanning or video capture applications.
$199 retail
PowerProduction Software; 2512 Curtis Ave., #1; Redondo Beach, CA 90278; 310-370-4793 or 310-370-2413 (fax)

StoryBoard Quick Libraries
Character libraries
Macintosh Plus or larger; StoryBoard Quick; System 6.0.5 or later.

StoryBoard Quick Character Libraries are additional groups of positioned and rotatable characters with more detail and facial expressions. The add-on libraries include the Drama Department, the Comedy Club and the Action Adventure Library.
$49 retail
PowerProduction Software; 2512 Curtis Ave., #1; Redondo Beach, CA 90278; 310-370-4793 or 310-370-2413 (fax)

Storyland
Comprehensive screenplay coverage tracking database
Macintosh SE/30 or larger; 8 MB of RAM recommended; FoxPro; PostScript printer recommended.

Storyland stores all profile information for each screenplay while allowing full coverage of the screenplay to be stored in the database for easy access and retrieval — a tremendous advantage over typical script logs stored in word processing documents. The database finds screenplays by: title; a/k/a; genre; writer; keyword; script recommendation; and writer recommendation. It defines proprietary genre list, format list and recommendation list. It has a full-featured search and report generator. This version is single-user. Customization is available.
Call for pricing
Panolog Software; Attn: Dan Nash; 4450 Lakeside Dr.; Burbank, CA 91505; 818-559-4277 ext. 122 or 818-559-4283 (fax)

Studio Controller
Macintosh connectivity for television post production
Macintosh Plus or larger; TC400D.

Studio Controller is a Macintosh application that provides a graphic interface to the functions of the Ensemble Designs' TC400D Four Channel TBC/D2 Controller. Control over video and chroma levels, setup, hue and system timing is directly accessible from a familiar user interface. Studio Controller brings any TC400D on an AppleTalk LAN as close as a user's Macintosh. Features include: complete control over TC400D; graphic representation of control settings; works simultaneously with manual operation; offline storage of TC400D registers to disk; numeric entry for precise adjustment; and is MultiFinder compatible.
$125 retail
Ensemble Designs; PO Box 993; Grass Valley, CA 95945; 916-478-1830 or 916-478-1832 (fax)

Sundance System Q-BASE Scene Logging Database
Video logging application
Macintosh Plus or larger; 2 MB of RAM; 20 MB hard disk drive.

The Q-BASE Scene Logging Database is a flat-file database integrated with VCR control. It grabs SMPTE time code marks for In and Out with Comment entry up to 32K per Event. Keyword search and group capability is provided using Boolean criteria (and, or, not). Event List allows random ordering of selected events with export to Q-CUT EDL for auto-assembly. Text files can be imported/exported to and from popular word processing and database programs.
$675 retail
Sundance Technology Group; 6309 N. O'Connor Rd., Ste. 111; LB 128; Irving, TX 75039; 214-869-1002 or 214-869-1026 (fax)

Sundance System Q-CUT Video Editing
Linear and non-linear video editing system
Macintosh Plus or larger; 2 MB of RAM; 20 MB hard disk drive.

The hardware/software system controls up to 15 video sources using RS-422/232 protocol, as well as a video switcher with GVG 100 protocol or the Video Toaster. It is available as cuts-only (QCX) and A/B Roll (QCAB). The software includes Edit Decision List management, import/export of CMX lists, auto-assembly, trace, Dynamic Motion Control and an integrated logging database (Q-BASE) with key word search and auto-import. It features non-linear editing with proprietary hard disk technology, as well as interface with Pioneer VDR-V1000 for broadcast-quality non-linear output.
$1,992 retail; QCX Cuts-Only
$3,995 retail; QCAB A/B Roll
Sundance Technology Group; 6309 N. O'Connor Rd., Ste. 111; LB 128; Irving, TX 75039; 214-869-1002 or 214-869-1026 (fax)

TAO Editorizer 2.1
Video studio control system
Color Macintosh with 68030 processor or larger; 4 MB of RAM; 2 MB of free hard disk space; serial port.

The TAO Editizer continues to raise the standard in video standard control with features found only in far more expensive systems, as well as a host of features not found elsewhere. The easy-to-use, Windows-based interface comes standard with a full range of professional controls, including: A/B Roll support for three VTRs; three SMPTE time code readers and one SMPTE time code generator; DPS TBC/Vector control; seven GPI triggers; and integrated tape logging. It supports RS-422, RS-232, Control-L and Panasonic AG-1970 VTRs. Switcher control includes the Panasonic WJMX30 and 50 and NewTek's Video Toaster 2.0, 3.0 and 4000. Optional ShuttleKnob and Audio Mixer are available.
$1,495 retail; Cuts-Only version
$2,495 retail; A/B Roll version
TAO, Inc.; PO Box 1254; Rolla, MO 65401; 314-364-4925, 800-264-1121 or 314-364-5631 (fax)

TAO StudioNet
Multidevice control for video post production
Color Macintosh with 68030 processor or larger; 4 MB of RAM; 2 MB of free hard disk space; serial port.

TAO's StudioNet brings multidevice control to video post production studios with the proven capabilities of TAO's editing control software. Individual VTR control modules allow users to expand StudioNet (up to 127 devices active simultaneously) utilizing RS-422 and RS-232 interfaces. Each Serial Module includes a SMPTE time code reader and generator, a G.P.I. trigger and can be used either as a stand-alone animation controller or as a serial device controller within the StudioNet system. Several levels of GUI-based edit control software are available with the StudioNet series: SN/Cuts, SN/Multisource, SN/Animate and SN/Log. StudioNet Pro/ABC is a rack-mountable A/B/C Roll package including hardware and software.
$3,495 retail; StudioNet Pro/AB Package
$3,995 retail; StudioNet Pro/ABC Package
$795 retail; additional device control
TAO, Inc.; PO Box 1254; Rolla, MO 65401; 314-364-4925, 800-264-1121 or 314-364-5631 (fax)

V-Station 3300
A/B Roll videotape edit control systems
Macintosh Plus or larger.

The V-Station 3300 is a computer-based A/B Roll edit control systems specifically designed for use with industrial and prosumer-grade VCRs and camcorders. The three VTR control systems for NTSC or PAL/SECAM applications support various combinations of VTRs fitted with a Panasonic 5-pin, a Sony Control-L/LANC terminal or Sony VISCA, RS-232C or RS-422A VTR driver protocols — irrespective of tape format. V-Station 3300 systems may be used with Macintosh or IBM-compatible computers. A/B Roll software diskettes for both of these computer platforms are included with the controller. Housed in an attractive compact enclosure displaying constant system status information, V-Station 3300 series VTR controllers connect to the computer via an RS-232C interface. Three independent programmable GPI triggers are fitted to enable similarly-equipped switchers and SEGs to be activated by the controller. Thanks to Future Video's exclusive multitasking design, V-Station 3300 edit controllers are able communicate with all three VTRs, simultaneously, dramatically reducing the time required to perform an A/B Roll edit. By simply not connecting the "B Source" VTR, V-Station 3300 may also be used for straight "cuts-only" editing. The V-Station 3300 systems automatically read Sony's Hi8 RC Time Code (RCTC). Optional SMPTE/EBU (LTC) time code reading from all three VTRs (yielding accuracy typically within one frame) is also available.

■ **Video CD Toolkit**
Turns MPEG-encoded audio and video into Video CD disc images
Macintosh II or larger; 8 MB of RAM; System 7.0 or later; 660 MB hard disk drive; CD-ROM drive.

Video CD Toolkit is a software package that will turn MPEG-encoded audio and video into Video CD disc images. Video CD Toolkit makes simple work creating Video CDs, including White Book-compliant and Karaoke discs. Users can create impressive digital video titles like movies, sales and promotional pieces and music videos. Everything that users need to create their disc image is contained in one package. Users specify track order, text on the screen and include information like publisher, preparer, country and text codes — Video CD Toolkit makes it easy.

■ **Video Machine Digital Player/Recorder**
Two-channel digital non-linear editor
Macintosh Quadra or larger; 20 MB of RAM; 16-inch monitor.

The Digital Player/Recorder (DPR) is a two-channel digital non-linear editor available as a single board upgrade for Video Machine and Video Machine Lite. The DPR is a complete online and offline editing solution that integrates analog (linear) and digital (non-linear) recording with adjustable quality ranging from proofing to Betacam/MII quality. The DPR utilizes powerful Video Machine features, including: a user-friendly timeline interface, frame accurate editing, control of more than 260 consumer to professional VTRs and an open architecture, which means that graphics, titles and Photo CD images can be created in any application and output to the Video Machine DPR. In addition, the DPR offers: real-time processing of 400+ preprogrammed/customizable digital effects and alpha wipes (alpha wipes available in Video Machine only); two channels (A/B roll digital video at 60 fields/second [single channel digital video configuration available for animation]); adjustable video compression rates of 3:1 (Betacam/MII) to 100:1 (offline proofing); digital, audio recording with 8-track live stereo mixing from hard disk in .WAV or CD format; and two built-in SCSI controllers (SCSI II or Wide SCSI).
$5,995 retail; Digital Player/Recorder (two digital channels)
$4,750 retail; Digital Player/Recorder (single digital channel)
$11,495 retail; Non-linear Studio
$14,295 retail; Professional Non-linear Studio
$2,500 retail; Digital Player/Recorder Upgrade (single to two digital channels)

Video Machine Lite
Online edit controller
Macintosh Quadra or larger; 20 MB of RAM; 16-inch monitor.

Video Machine Lite combines all the classic functions of a video studio on a single board, incorporating dozens of high-powered features. Video Machine Lite is an online edit controller with A/B and A/X roll capabilities and audio video split editing. Hundreds of VCRs can be connected via LanC (Sony Control-L), Edit Control (Panasonic 5-pin) or the optional RS-232/RS-422 interfaces. Built-in time code support includes VITC, RCTC, Rapid and CTL. Longitudinal Time Code (LTC) is supported through the optional Studio Control Box. Video Machine Lite comes with dual channel frame synchronizers, dual channel proc amp controls, four stereo audio channels, 200+ preprogrammed digital video effects (fully customizable) and an easy-to-use graphical timeline interface for editing. Video Machine Lite's open architecture means that graphics, titles and images can be created in any application and output to Video Machine Lite for spectacular effects. Video quality is processed internally at 4:2:2 and output is composite or S-Video. Video Machine Lite is modular in design and can easily be upgraded with options such as the Component (YUV) Interface, Studio Control Box, the Jog Shuttle option and the Digital Player/Recorder.
$2,500 retail

Videodisc In-House Premastering System
Enables random access video editing and complete videodisc production in-house
Macintosh II or larger.

Videodisc Premastering Systems from IMS incorporate tabletop Panasonic Videodisc Recorders to enable random access video editing and complete videodisc production in-house, on write-once or erasable disc media. The producer can work with disc-based still or motion video from the very start of the production process. IMS provides a wide variety of editing hardware and software, input/output equipment and control devices to work with any computer platform. For users whose intention is to mass replicate and distribute Laser Vision format commercial discs, IMS will coordinate with the services of 3M Prerecorded Optical Media so that the Panasonic Discs can be used directly as the source for the mastering process.
Under $12,000 starting price retail; WORM disc recorders
Under $23,000 starting price retail; erasable disc systems
Image Management Systems, Inc.; 239 W. 15th St.; New York, NY 10011; 212-741-8765 or 212-243-2344 (fax)

VideoEdge
Video editing system
Macintosh with 68030 processor or larger; 5 MB of RAM; 40 MB hard disk drive with 5 MB of free space; 256 color display.

Users can now create professional-looking videos as easily as clicking on the Macintosh. VideoEdge is designed for easy use with a minimum of learning. Users connect a camcorder and VCR — then choose and log scenes in software, add titles and animations, even include QuickTime movies (requires a video digitizer, such as the VideoSpigot) — the Macintosh automatically assembles a complete video production on a standard tape in a recorder — or on disk as a QuickTime movie. Assembling and editing video footage is as easy as clicking an on-screen button. Video scene selections are kept in a database capable of storing up to 650 scenes per tape. The Hardware Control Unit provides built-in camcorder and VCR control for up to six video sources. It controls popular 8mm and Hi8 camcorders: Sony, Canon, Ricoh, Yashica, Kyocera and Nikon. VideoEdge has built-in Sony LANC — Control L and Control S, also trainable infra-red. It allows users to import and export edit lists in CMX format.

VideoToolkit 2.0
Videotape cataloging, editing and QuickTime movie production package
Macintosh Plus or larger; 2 MB of RAM; QuickTime digitizer optional.

VideoToolkit is a complete videotape cataloging, editing and QuickTime movie production package. Using patented technology, it controls consumer, "prosumer" and professional camcorders and VCRs made by Sony (including the ViSCA-compatible Vdeck and Vbox), Panasonic, JVC, Canon, Mitsubishi, Nikon, Ricoh, Yashica, Kyocera and NEC (PC-VCR). VideoToolkit includes a robust videotape logging and editing application, patented camcorder/VCR control cables, a tiny infrared remote module and a step-by-step User's Guide. By adding any QuickTime-compatible digitizer, QuickTime movies can be prepared from any scenes automatically and at up to 30 frames per second using CueTrack's exclusive "step-and-grab" routine. Video snapshots, or Snaps, of a scene's in- and out-points can be stored as part of a tape's log. In addition, an on-screen video window can be used to view the source material while logging. For video professionals, VideoToolkit is a convenient videotape logger, assembler and edit list management tool. It produces an exportable CMX or Digital F/X-compatible EDL and directly controls many RS-422 and RS-232 VTRs. For educators, VideoToolkit paves the way to more effective video and computer-based classroom presentations. For computer and video enthusiasts, VideoToolkit is an affordable and easy-to-use package for both analog (tape to tape) and digital (QuickTime) movie making. VideoToolkit works with most camcorders and VCRs that use the following remote control methods: Sony Control-L/S/P; Sony ViSCA; Panasonic Control-M (AG-1950/60/70); RS-422 (AG-7650/7750); RS-232 (AG-5700); and infrared remote.

■ **VideoVision Telecast**
Production-level digital video solution
Macintosh Plus or larger.

VideoVision Telecast is a powerful, production-level digital video solution for Macintosh that features broadcast-quality output, 16-bit audio and Betacam input and output in a rack-mountable system that meets both RS170-A and CCIR 624-4 specifications for broadcast video. VideoVision Telecast gives video professionals total control with the power, flexibility and performance of QuickTime-based video editing. VideoVision Telecast features two NuBus connector cards and a 19-inch rack-mountable control box that delivers 16-bit stereo audio, 30-frame, 60-field full-motion video capture and playback, full genlock capability, SMPTE time code for both audio and video and professional-level audio and video input/output connections. It provides NTSC, PAL and SECAM support.

Vertical Markets/Financial Planning & Analysis

ATX Tax Programs
IRS forms
Macintosh Plus or larger; Excel 4.0 or later; System 6.0 or later.

With ATX Smart Forms, Macintosh tax practitioners will never prepare a tax return by hand again. Smart Forms' foremost advantage is speed and ease of use. Tax professionals can begin to prepare tax returns in minutes because the online forms look just like the IRS forms and tax information is entered directly on the forms. Because ATX's power is derived from Excel, tax preparers can modify all calculations and link their own worksheets. ATX's Smart Forms are for professional tax preparers who want speed from their Macintosh and need professional laser-print quality for all their tax returns. ATX's tax programs include: 433, 706, 709, 720, 940, 941, 990, 990BL, 990C, 990PF, 990T, 1040, 1040NR, 1041, 1065, 1066, 1120, 1120H, 1120DISC, 1120DF, 1120F, 1120FSC, 1120L, 1120PC, 1120POL, 1120REIT, 1120RIC, 1120S, 2290, 5471, 5472, 5500 and 1041A/5227.

BizPlanBuilder 4.1b
Business, marketing and sales business plan template
Macintosh 512K or larger; Word Processor and Spreadsheet required; hard disk drive recommended.

BizPlanBuilder is a comprehensive business plan template with descriptive and analytic text files plus financial statements in spreadsheet format. Sales and marketing oriented, it covers a variety of topics from product/service descriptions to marketing strategy and analysis to financial ratios. Manual includes a reference guide with key business terms and concepts, suggestions for acquiring funding from banks, SBA, or investors, a sample finished business plan and a hard copy of the disk's contents. The software is designed to allow the business person to edit and customize a pre-written, pre-formatted business plan with fill-in-the-blank paragraphs, starter sentences and suggestions to help get past writer's block. The financial spreadsheets are already set up with formulas in place and include a balance sheet, income statement, cash flow statements, 12-month budget, break-even analysis, etc. Requires a word processor and a spreadsheet program.

bond @nalyst
@function add-in library for Microsoft Excel
Macintosh II or larger; math coprocessor recommended.

bond @nalyst is an @function add-in library for Microsoft Excel. The library includes standard SIA and AIBD calculations, such as price, yield, accrued interest and duration, for 24 types of Treasury, international, agency, corporate and municipal bonds and notes. The library includes conversion factor calculations for CBOT, FINEX and foreign contracts as well as forward price calculations for deliverables. Conversion factors can be combined with forward prices to find cheapest-to-deliver and to compute delivery invoice price, gross basis and net basis. The library also includes repo rate and future value functions. All bond functions support odd first coupons, simple-interest assumption for last coupon period, mulitple calendars and after-tax consideration. For bills and CDs, the library includes strip and tail calculations, useful for identifying opportunities to enhance yield via the futures market. In addition, the library contains functions for date arithmetic, such as 30/360 day counts.

Bottomline-V Business Valuation System
Produces results for the eight most common valuation methods
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

The Bottomline-V Business Valuation System consists of four business valuation models that each produce results for up to 10 common valuation methods: multiple of earnings, multiple of gross revenues, capitalization of earnings, dividend paying capacity, excess earnings (Treasury method), discounted future earnings, restricted securities, discounted cash flow, internal rate of return and net asset value (book value). The History model allows input of up to six years of year-end income statement and balance sheet information, and it generates automatically the two standard cash flow statements, two ratio analysis statements with more than 60 key ratios (including the Robert Morris Associate ratios) and a complete business valuation analysis statement. Internal rate of return is also provided. The Range model does exactly what History does, but it then projects all seven statements five years into the future based on 10 six-year averages and nine constants from the data input of the income statement and balance sheet. The 5-year Model is used for those businesses that have only been in operation for a year or less. The year-end income statement and balance sheet information are entered in the first column and basic assumptions about future performance are entered to generate a five-year forecast of seven key financial statements, including the business valuation analysis statement. The Bottomline-V Business Valuation System includes a 200-page user manual and 12 CPE credits for CPAs (with NASBA approval) and other business professionals. A capitalization rate program is also included that uses long-term bond interest rates and the beta factor, which compares the firms performance to its industry.
$495 suggested retail (special $299); includes technical support

Bottomline-V Financial Decision Support System
Business financial planning, budgeting, modeling, analysis and valuation system
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

Bottomline-V is ideal for analyzing profitability, cash flow, growth, capitalization and economic value added (EVA). It generates all of the financial reports necessary to manage a business. The user simply completes a 12-month budget/cash flow program using the forms and program provided. and then has the option of a one-year monthly model, two-year quarterly model or five-year annual model, each consisting of eight integrated financial statements. All equations, logic and formats are provided. There's a historical analysis model and one that forecasts seven key financial statements, five years based on historical income statement and balance sheet data. Bottomline-V includes a 200-page user manual, as well as 12 CPE credits for CPAs and others, with NASBA approval. Users follow input screens to prepare assumptions in the Income Statement, Balance Sheet and Statement of Changes in Financial Position. The Statement of Cash Flows under FASB95 (Financial Accounting Standards Board, Rule 95), two ratio analysis statements with more than 60 ratios (including the Robert Morris Associates ratios) and a complete business valuation analysis statement are generated. The 14 models in the package are as close to the real world as possible, and can be used for manufacturing, service, wholesale, retail, construction/contractors, not-for-profits, real estate, etc. The system also contains a 24-month model.
$299 retail; starter kit

BPlan
Budgets, balance sheet, income statement, cash flows and ratios
Macintosh Plus or larger; 1 MB of RAM; Microsoft Excel 1.04 or later.

BPlan is a financial forecast generator ideal to use in loan application preparations, evaluating a business or for testing the financial impact of changes in business conditions. BPlan provides financial forecasts quickly (in less than one-half hour), complete with integrated statements of cash flows, income statements and balance sheets. By entering a user's expected inventory needs, accounts receivable collection expectations, accounts payable terms, interest rates and gross profit margins, a complete financial forecast is produced. This means that the What-If games involving such variables as gross margins, inventory turns and terms of purchase and sale can be played efficiently and repetitively until the plan is satisfactory.

Business Financial Analysis
Analyzes a company's financial condition
Macintosh Plus or larger; Microsoft Excel.

Business Financial Analysis can be used for analyzing a company's financial condition. This easy-to-use, flexible and powerful program will perform financial statement analysis, cash flow analysis, ratio analysis and more. Added to the program's power is the popular and powerful Z-Score model. Based on the Altman Z-Score, this model helps predict the likelihood of a business going bankrupt. This model implements the analysis to provide useful and practical information. With a quick menu selection, results can be displayed and interpreted graphically. Business Financial Analysis is easy to use. Users enter financial statement information for any number of years and watch the analysis be created in an easy-to-understand report format. Information can be easily obtained from financial statements to perform the valuable analyses. Cashflow modeling and analysis tools option integrated into new version.

Business Plan Toolkit
Business plan preparation
Macintosh 512K or larger; Microsoft Excel, Multiplan or Works (Excel recommended).

Business Plan Toolkit is a set of spreadsheet worksheets, macros, graphs and a workbook designed to assist in the development of a business plan. It includes a practical and useful workbook with suggested outline, sample plan and chapter-by-chapter instructions for preparing a professional business plan. Software includes spreadsheet files for pro forma statements, financial analysis, sales forecasts and market forecasts. Spreadsheets can be customized or used as is. The program includes prompted topic-by-topic text preparation and a complete sample business plan in the manual and on the disk. The Business Plan Toolkit can be easily modified to suit any business. Even though the package will work with any spreadsheet that reads SYLK files, the company recommends Microsoft Excel because it includes macros and charts that will not work with the other spreadsheets.

Capital Projects Management System
Multiyear budget planning
Macintosh SE/30 or larger.

The Capital Projects Management System (CPMS) is designed to facilitate the creation and management of real and proposed projects, budget items and work orders, as well as their perspective multiyear Capital and Operation/Maintenance (O&M) budgets within Engineering and Planning departments. The system was initially designed for use in the Electric and Gas industries, but is easily modifiable to support any industry using multiyear planning for projects. The system allows the Engineering and Planning departments to prioritize projects to their specific needs and to compare and toggle between their priorities. It also allows for multiple year analysis of both proposed and estimated corresponding budgets and for the "sliding" of budgets from one starting year to another, allowing for the inclusion or exclusion of various projects within yearly budgets. CPMS produces a seven-year plan budget report, as well as work order construction reports, and may be modified to produce plans of a longer or shorter duration.

CashflowPlus
Business or individual cash flow analysis
Macintosh Plus or larger; printer recommended.

CashflowPlus is a fully integrated 12-month cash flow system with a five-year financial simulation and forecasting model consisting of nine key financial statements. Users can analyze profitability, liquidity, growth and business value. CashflowPlus consists of one program that works with an Excel spreadsheet on a Macintosh. After users prepare their 12-month cash flow worksheet, the totals from this program integrate into the five-year financial statement model. Users follow input screens to prepare their assumptions in the Income Statement, Balance Sheet and Statement of Changes in Financial Position. The Statement of Cash Flows under FASB95 (Financial Accounting Standards Board, Rule 95) and two ratio analysis statements are generated. Federal and state taxes are also projected after the various deductions. Users can do what-if analysis and customize the system to meet their needs. CashflowPlus includes a 28-page user guide.
$99 retail; includes technical support
ILAR Systems, Inc.; 334 Baywood Dr.; Newport Beach, CA 92660; 714-759-8987, 714-640-2985, 800-777-4920, 714-720-1530 (fax) or 714-640-7233 (fax)

The Commercial Loan Analysis Model
Six-year historical analysis and five-year projections for major industries
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

The Commercial Loan Analysis Model allows bankers, investment bankers, government organizations, loan brokers and others to quickly and easily obtain a complete financial analysis of any organization by simply entering up to six years of year-end Income Statement and Balance Sheet information. The model then automatically generates the Statement of Changes in Financial Position, Statement of Cash Flows under FASB95, ILAR's 25 Standard Ratio Analysis (including Altman Z Score), The Robert Morris Associates 40 key Ratio Analysis Statement and The Business Valuation Analysis (using eight common methods). Then, the model projects all seven statements five years into the future, using 10 six-year averages (if six years of historical data are used) and nine constants from the data input. A user now saves the results under a unique name and prints all 11 years (including the factor column with the 19 variables labeled) for analysis purposes. The first run of the model gives an extrapolative five-year forecast of the business. Thereafter, a user can create a new future for the enterprise by overriding any of the 10 six-year averages and nine constant variables and performing multiple what-if analyses. The system consists of eight models for each of the following industries: manufacturing, real estate, service, health care, construction/contractor, not-for-profit, farming and a universal model for wholesale, distribution, retail, etc. Each model can be readily customized for specific requirements and technical support is available. This system is ready to use and has a minimal learning curve (no formal training required) with toll-free 800 technical support included. Users simply follow the input screen to enter their historical data and assumptions; The Commercial Loan Analysis Model does the rest, supplying all of the logic, equations and formats.
$3,000 suggested retail (special: $1,295); includes full technical support
ILAR Systems, Inc.; 334 Baywood Dr.; Newport Beach, CA 92660; 714-759-8987, 714-640-2985, 800-777-4920, 714-720-1530 (fax) or 714-640-7233 (fax)

Complete Bond Analyzer
Precise yield calculations (pre- and after-tax), including YTM, YTC, accrued interest, bond equivalent yield, etc.; calculates duration and determines spot rate yield curve
Any Macintosh.

The Complete Bond Analyzer is a bond investment package that performs several functions. The program can find: purchase price given yield to maturity; yield to maturity given purchase price; yield-to-call; results for precise time periods; accrued interest at purchase or sale; duration and revised duration; theoretical spot rates; results for taxables or tax-exempts; and results for government, agencies, conventional or zero coupon bonds.

Depreciation Calculator
Calculates and prepares tax depreciation schedules
Macintosh with 2 MB of RAM; hard disk drive; Microsoft Excel 4.0 or later.

Depreciation Calculator is a template that works with Microsoft Excel 4.0 or later. It calculates and prepares federal and state tax depreciation schedules for fixed assets for regular tax, alternative minimum tax (AMT), corporate ACE, and for bood purchases. The following depreciation methods are supported: straight-line, declining balance, ACRS, MACRS (mid-month, half-year and mid-quarter conventions), section 179 first-year expensing and listed auto limitations. The template uses a custom menu bar to make entering data as easy as possible, and all available options are fully explained in the User's Manual. It is System 7 compatible. Call for more information or order by mail.

Dow Jones Market Analyzer Plus
Technical analysis
Macintosh Plus or larger; SuperDrive or hard disk drive; modem.

Dow Jones Market Analyzer Plus accesses Dow Jones News/Retrieval to collect and update up to 15 years of price and volume data on stocks, bonds, mutual funds, Treasury issues and market indexes, up to one year of option prices and historical commodity prices back to 1970. The program uses the data to construct linear and semilog bar charts, candlestick charts, point and figure charts, comparison and relative strength charts. Analytic features include an extensive library of ready-to-use technical analysis formulas that can be charted as is or modified to suit individual preferences. Plus, users can build and enter their own formulas for one-time display, or save them for future use. A Test Strategy option historically tests a user's technical trading ideas for profitability. Other analytic tools include user-defined technical reports, moving averages, support/resistance lines and six built-in volume indicators. In addition, the program's four user indexes can be used to establish relationships among followed issues. For example, the incidence-percentage index can be used to measure the percentage of user-selected issues that are performing above their 200-day average.

Dow Jones & Company, Inc.; PO Box 300; Princeton, NJ 08543; 800-815-5100 or 609-520-4660 (fax)

Dow Jones Market Manager Plus
Portfolio management
Macintosh Plus or larger; modem.

Dow Jones Market Manager Plus allows a user to account for security transactions while providing printed reports for review and tax records. It also gives a user the ability to preview the consequences of matching sell transactions against existing positions before actually executing them, helping a user determine the profitability of the potential transaction. The software maintains accounting information for up to 256 different portfolios and 1,800 holdings; automatically dials Dow Jones News/Retrieval at user-specified time for the latest security prices; prices automatically stocks, bonds, options, mutual funds and Treasury issues; accommodates buy, sell, short-sell and buy-to-cover transactions; contains a calendar of financial activity; values stocks for a date in the past trading year; generates a wide variety of reports to show the value and status of a portfolio; and graphically represents gain/loss, return on equity, yield and diversification.

Enhanced Chartist
Charting and technical analysis
Macintosh SE/30 or II family; 40 MB hard disk drive.

Enhanced Chartist includes all of the features of MacChartist, a real-time charting and technical analysis program. Enhanced Chartist can track and chart commodities, options, stocks and indices. More than 50 popular technical indicators are available. Options analysis and advanced trendline analysis are also standard features. Enhanced Chartist takes full advantage of multiple windows and multiple monitors. Each monitor can contain a unique display that may include charts, quotes, portfolio management and/or most MultiFinder applications. Enhanced Chartist displays 1,024 live quotes, 22 live windows and can store two years of daily history and nine years of weekly history. A user may also chart 168 items on an intraday and tick by tick basis.
$2,590 retail

Financial Decisions 3.0
Excel templates
Macintosh Plus or larger.
Financial Decisions is made up of eight primary modules containing examples of 115 problems with their solutions. These 115 templates are designed to simplify financial planning, whether users are a mortgage loan manager, a new car shopper, a heavy equipment buyer who has to decide whether to rent or purchase, a personnel manager who has to advise a temporarily reassigned manager on whether to buy or rent a home or a parent who has to begin saving for the children's education or for early retirement. Users know in advance whether they are better off taking the 1.9 percent financing on the new car or the $1,000 cash-back offered. Users know exactly how much their Certificate of Deposits will yield at maturity. For those who want complete mortgage amortization schedules, complex after-tax cash flow investment analysis or discounted cash flows, Financial Decisions provide the answers. Financial Decisions uses the formula, rather than macro, approach to problem solving. The advantage is that different what-ifs can be sequentially input to get instantaneous results or comparisons. Financial Decisions helps Excel owners get their full potential out of Excel. The program is indispensable for real estate professionals, investors and all those who want ease in determining the present and future value of money.

financial @nalyst
Add-in library of 45 @functions for Microsoft Excel
Macintosh II or larger; math coprocessor recommended.
financial @nalyst is an add-in library of 45 @functions for Microsoft Excel. The library includes functions for generalized cash flow analysis, such as net present value, internal rate of return and cash flow duration (or weighted average life). It includes an array of functions for analyzing amortized loans and annuities. In addition, it has functions for date and business day arithmetic. Cash flow analysis functions support unevenly spaced flows, multiple interest rates, multiple compounding schemes and concise specification of repeated flows. Amortization functions handle advance and balloon payments, odd first and last periods and simple interest accrual. The types of calculations possible with library @functions include: NPV for unevenly spaced cash flows; IRR assuming simple interest over fractional periods; periodic payment of an amortized loan with a balloon payment; date of the third Wednesday of a given month; and result of adding a number of business days to a date, assuming given holidays.

FYControl
Financial analysis and review
Macintosh SE or larger; 4 MB of RAM.
Powerful, yet easy-to-use software for financial analysis and review, FYControl gives users the flexibility to analyze and report on a wide range of financial data, including budgets, actuals and forecasts. It enables users to detect emerging trends, examine variances and other critical financial indicators quickly and confidently, enhancing overall planning and decision making. FYControl allows users to: create customized reports, drill down for detail information, compare data with different levels of detail, make changes to plans or forecasts and view the impact of those changes. FYControl is fully integrated with FYPlan. Built-in security and database structure provide full data integrity. Custom reports and analyses are done online using the familiar Windows or Macintosh interfaces.
Call for pricing; depends on system configuration
Pillar Corp.; 950 Tower Ln., Ste. 400; Foster City, CA 94404; 415-349-6200, 800-475-6226 or 415-349-5515 (fax)

FYPlan
Business planning and budgeting software
Macintosh SE or larger; 4 MB of RAM.
FYPlan is an enterprise-wide planning and budgeting system for developing annual budgets and rolling forecasts. FYPlan is an integrated database — not a spreadsheet. Line managers use FYPlan for developing complex "bottoms up" budgets and rolling forecasts. Planning managers use FYPlan for managing the "tops down" elements of planning, such as what-if analysis and across-the-board adjustments to operating plans and budgets. Users can manipulate plan details any way they want and quickly see the results in profit and loss, balance sheet and cash flow statements. Users can easily develop customized reports by searching and sorting their planning data using FYPlan's unique report generator. FYPlan provides valuable benefits, including a multiuser architecture that allows planning managers to control who participates in the planning process and how they participate; rollups that work the first time provide a simple, yet powerful way to consolidate planning information — without the complexity of macros and linked files; manage the big picture and the detail through integrated financial statements that are automatically generated by FYPlan; generate reports and graphs in any way with accuracy; and transfer information to and from other business systems via FYPlan's import/export features. Pillar complements its products with an experienced client services organization, offering consulting, education and support services to ensure customers a smooth and successful implementation.

How To Write A Business Plan
Business plan preparation
Macintosh 512K or larger; word processing software.
How To Write A Business Plan provides a user with a complete narrative for a business plan and includes all of the necessary financial statements, such as income statements, balance sheet and cash flow. Every part of a business plan, such as the objectives, marketing plan, production plan, finance plan, key officers and personnel is provided for. Also included is a sample business plan, as well as a series of questions that can provide a "go" or "no go" response for a new business. Using a template system, a user simply chooses the narrative description provided and inserts his or her own company information and data. Using a word processing program, a user can print out the entire business plan. The package has a series of options so that any type of business plan can be constructed.

HyperEntrepreneur 2.1
Education — small business
Macintosh Plus or larger; hard disk drive.
HyperEntrepreneur (H/E) is a user-driven tutorial that helps users focus on business needs and evaluate the viability of their business idea. H/E's interactive dialogue guides users through the program's modules where they test business ideas, evaluate their skills, choose a business name and plan strategies to deal with the potential risks of doing business. H/E is not a template program. H/E will train users in concepts, suggest ideas and help them focus on their business plan and policies — greatly increasing their chance for success. H/E easy access menu is designed to permit users to learn at their own pace and level of understanding. Users can review a topic at any time with the click of a button. Educators are using H/E in outcome-based and integrated learning programs. And, H/E helps them meet their State's Dept. of Education requirements. It is also available for PCs.

Integration Financial Systems, The Professional Plan V.4.0
Full financial planning system
Macintosh Plus or larger; 20 MB hard disk drive; System 7.0 or later.
The Professional Plan is a comprehensive financial planning package for professionals who want the benefit of state-of-the-art computing. The Professional Plan offers full financial analysis and generates up to 100 pages for the client and planner to evaluate. The professional planner can customize each plan for the individual client's needs. Multiple charts and graphs help in visualizing client's information. The Professional Plan features complete tax analysis with 10-year projections, alternative minimum tax calculations, 10-year averaging, five-year averaging and IRA pension rollover comparisons. Additional tools enable the professional to analyze risk, estate/inheritance tax, cash flow, life and disability insurance, plus retirement and education funding. In addition, complete financial statements and portfolio analysis are included. Unlimited opportunity is available for what-if scenarios to support the decision-making process. One-step data entry provides a completely integrated planning system. The program has multiuser support.

■ **Investment Club**
Small investors helper
Macintosh Plus or larger; FileMaker Pro runtime.
Investment Club was developed and designed exclusively for the growing organizations of small investors contributing toward pooled purchases of stock. The program is based on the Valuation Unit System, similar to that used by mutual funds, in which each member contributes a minimum monthly amount. It includes two basic files: a Member Evaluation File that lists the monthly investment per member, total dollars invested per member and number of units owned; and a Stock Evaluation File displaying, in column form, each stock by number of shares, purchase date and price, total cost, total value and current profit of loss. The program also shows cash on hand and where placed, records unequal investments and admission of new members at any time. The program is easy to learn and easy to access, providing a fast, efficient and accurate record of any club's financial standing regardless of size.

Investment IRR Analysis (After Taxes) For Stocks, Bonds And Real Estate
Quickly displays up to 40 years of detailed cash flows (pre- and after-taxes) and calculates IRR and Revised IRR (realized compound yield) for the investment
Any Macintosh; Microsoft Excel, Multiplan or ClarisWorks.

The Investment IRR Analysis (after tax) for Stocks, Bonds And Real Estate is an investment package that evaluates existing and proposed real estate, stock and bond investments by after-tax internal-rate-of-return analysis. The program computes and displays a complete year-by-year detailed pretax and after-tax cash flow analysis, as well as the internal rate of return for the existing or proposed investment. It also calculates the revised IRR (realized compound yield) and shows the results, with reinvestment of after-tax cash flow, at a user-specified earnings rate for reinvestment.

LoanAmortizer
Calculates monthly payments and produces amortization schedules
Macintosh Plus or larger; Microsoft Excel 3.0 or 4.0; System 6.0.7 or later.

Users can enter Principal, Interest Rate and Length of Loan to calculate monthly payments and produce amortization schedules. Schedules show breakdown of Interest and Principal for each payment, each year, and cumulative totals of Interest and Principal for any and all years. Entering "overpayment" over-ride (payments made above regular payments) results in reduction in term in the amortization schedules.

mbs @nalyst
@function add-in library for Microsoft Excel
Macintosh II or larger; math coprocessor recommended.

mbs @nalyst is an @function add-in library for Microsoft Excel. The library includes calculations useful for trading mortgage-backed securities, such as GNMA, FNMA and FHLMC pass-throughs. The functions not only handle pass-throughs, but also interest-only (IO), principal-only (PO) and other strips. Calculations include price, yield, modified duration, weighted average life, implied prepayment speed, payment components and factors. Six different prepayment assumptions are supported: constant prepayment rate (CPR), absolute prepayment rate (APR), Public Securities Association (PSA), custom prepayment curve, FHA experience and n month.

options @nalyst
@function add-in library for Microsoft Excel
Macintosh II or larger; math coprocessor recommended.

options @nalyst is an @function add-in library for Microsoft Excel. When used concurrently with a data feed, the functions provide real-time pricing and sensitivity analysis both for individual options and for portfolios containing multiple options. The library supports both modified Black-Scholes and binomial (Cox-Rubinstein) pricing models. It also includes four functions for volatility calculations. One function can provide real-time implied volatility calculations from option quotes. Three other functions compute volatility from historical underlying prices. Pricing and sensitivity functions support American & European calls and puts. The functions accept a holding cost parameter for options on equities, futures (Black model), commodities, foreign currency (Garman-Kohlhagen model) and bonds. Sensitivities computed include delta (hedge ratio), gamma, theta, rho, kappa, omega and more. For options on equities, three dividend adjustment methods are supported: continuous dividend yield, constant dividend yield and actual dollar dividends. Other functions included perform date and business day arithmetic.

Package X Plus
Tax preparation
Macintosh Plus or larger; Excel 4.0 or later; System 6.0 or later.

Package X Plus combines more than 250 IRS tax forms into a single tax program for the tax professional. The tax practitioner can easily prepare any tax return form 706 to 5500 with Package X Plus. Tax preparers can begin to prepare tax returns in minutes because the online forms look just like the IRS forms and tax information is entered directly on the forms. Because ATX's power is derived from Excel, tax preparers can modify all calculations and link their own worksheets. ATX's Smart Forms are for professional tax preparers who want speed from their Macintosh at a reasonable cost and need professional laser-print quality tax returns. With ATX Package X Plus, Macintosh tax practitioners will never prepare a tax return by hand again. Package X Plus includes: 706, 709, 720, 940, 941, 990, 1040, 1041, 1065, 1120, 1120S, 2290, 5471, 5472 and 5500.

Personal Hotline
Beyond charting and analysis
Macintosh Plus or larger; 1.5 MB of RAM; hard disk drive.

In today's markets, knowing what to look for doesn't always guarantee success. Users also must know when to look, a critical factor that Personal Hotline can help them determine. Trendsetter's expert model lets users discern which charts need closer examination, saving them a very precious commodity — time. And when the time to take action nears, Personal Hotline delivers with access to all of the charting and analysis features of Personal Analyst. Based on channel identification and chart pattern recognition, this unique trading model makes recommendations on where to buy, sell and place stop-losses. Personal Hotline tracks its own trading results, trailing stops and moving objectives as market conditions change.

PlanMaker
Business plan software
Macintosh with 2 MB of RAM; hard disk drive; System 6.0.5 or later.

PlanMaker is a self-contained program that enables users to craft professional-quality and sophisticated business plans. Guiding users step by step from executive summary through important financial forecasts, PlanMaker provides the best format and narrative in innovative on-screen modules that are easily customized to suit a user's enterprise. Three finished business plans, complete in every way, are available to suggest phrasing and composition. Partial or complete segments may be edited to suit a user's needs, and easily imported into a business plan. All calculations and formatting are automatic.

Portfolio Watcher
Portfolio management
Macintosh Plus or larger; hard disk drive; System 6.0 or later.

Portfolio Watcher offers a complete solution to portfolio management. If offers a complete record keeping system for stock, bond, option and mutual fund investments. Portfolio Watcher can maintain an unlimited number of portfolios, limited only by disk space. The program handles Buy, Sell, Sell Short, Cover Short, Dividends, Stock Splits and Interest Income transactions. It adjusts for stock splits, dividends, cash distributions and return of capital. A user's cash balance is determined instantly after each transaction. When it's time to do income taxes, users can export all reports and data to other programs, such as a spreadsheet program. Portfolio Watcher shares historical pricing information with Micro Trading Software's technical analysis charting programs, Wall Street Watcher and Stock Watcher.

Pro Forma
Generates pro forma financial statements with detailed analyses automatically
Macintosh Plus or larger; Microsoft Excel.

Pro Forma is a modeling program used to generate and analyze pro forma (projected) financial statements. A user can forecast and evaluate a company's financial condition for up to 10 years, estimate financing requirements, perform What-If analysis on alternative courses of action and provide a standard evaluation of actual performance. Pro Forma is completely automated. After a user sets the parameters, the pro forma financial statements are quickly generated. Extensive what-if tools make multiple scenario modeling easy. It includes analysis of financial statements.

Professional Analyst
Real-time charting and analysis
Macintosh II or larger; 4 MB of RAM; hard disk drive; Signal data service.

Professional Analyst can turn a Macintosh into a professional trading station. It brings each market to life with multiple quote monitors, tickers and graphic windows. Users can track all of the markets, tick by tick, minute by minute, staying informed as the action happens. Designed by traders for traders, this real-time charting package will maximize a user's profits. It features audio/visual alarms, the best technical studies, market leaders, time and sale — everything users need to succeed. Easy to use, fast and precise, Professional Analyst makes real time really affordable.

Quote Master 1.8
Real-time stock monitoring system
Macintosh Plus or larger; 20 MB hard disk drive.

Quote Master allows users to monitor security prices as they happen, 24 hours a day. Users can track and follow any valid stock, future, option or index that is desired. The system uses a low-cost FM receiver for current price, high and low, net change and volume. User-set alarms signal price limits, volume changes, limit orders and more. Quote Master graphs intra-day prices for any monitored security and graphs inter-day prices for any archived security. Ticker information can be exported to spreadsheets and databases for further manipulation.

Sales And Market Forecasting Toolkit V2.0
Explains and illustrates sales and market forecasting techniques
Macintosh 512K or larger; Microsoft Excel, Multiplan or Works (Excel recommended).

The Sales and Market Forecasting Toolkit is a set of spreadsheet worksheets, macros, graphs and a workbook designed to assist in sales and market forecasting. The complete package includes a disk and a practical, easy-to-use workbook that explains all of the formulas and the forecasting methodologies used. It provides detailed, comprehensive coverage of practical forecasting techniques, such as customer poll, market share model, product life cycle, linear regression and others. It also includes dozens of sample spreadsheet models, graphs and special forecasting macro commands (Excel version) and charts. Even though the package will work with any spreadsheet that reads SYLK files, the company recommends Microsoft Excel because it includes macros and charts that will not work with the other spreadsheets.

Signal
Real-time stock market information provider
Macintosh SE or larger.

Signal is designed for the serious investor and brings market information from the major exchanges directly to a user's computer in real time via FM, cable TV or satellite. Signal lets users create customized portfolios by choosing the issues and the information they want to track, and it allows them to monitor more than 65,000 issues from all the major exchanges. Users can set audio and visual alerts for high or low price limits and volume, and Signal gives users a customizable ticker that scrolls on the bottom of the screen. Users can use Signal by itself or in conjunction with many other software programs to create spreadsheets and analyze portfolio performance.

Spreadware Budgeting
Creates a variety of simple and complex budgets, as well as providing tools to modify existing budgets
Macintosh Plus or larger; Microsoft Excel.

Spreadware Budgeting allows a variety of simple and complex budgets to be created for companies and/or departments and divisions. Standard accounts may be established, and a budget can be based on actual figures, growth rate, previous years and previous reporting periods. Spreadware Budgeting is designed to facilitate the consolidation of multiple budgets. Revisions may be made before and after consolidation. When the budget is completed, an analysis can be made when the actual data becomes available. A forecast option is also provided, which allows for an analysis of projected results based on actual data.

Spreadware Business Valuator
Estimates the value of a business
Macintosh Plus or larger; Microsoft Excel.

There are numerous methods of estimating the value of a company, and Spreadware Business Valuator provides users with more than 10 of the most popular and useful methods. These methods can be used independently or weighted in any manner. Users could hire an appraiser for thousands of dollars who could give them a wide range estimate or do it themselves quickly and easily. Not only does this model apply various valuation methods, but methods can be combined and weighted. Weighting can also be applied within a method. If the user owns or is invested in a business, do they know what it's worth? If users are buying or selling a business, shouldn't they apply a valuation model? Because of the easy-to-understand design, users do not need to be a financial expert to estimate the value of a business when using Spreadware Business Valuator, and most importantly — it is designed so closely held company values can be estimated quickly and easily.

Vertical Markets/Health Care

12 Lead ECG Case Studies
Computer-assisted instruction programs for health care professionals
Macintosh Plus or larger; 2 MB of RAM; HyperCard 2.0 or later.

With 12 Lead ECG Case Studies, users will apply basic skills of 12-lead ECG interpretation to 12 case studies, identifying anterior, lateral, posterior and inferior myocardial infarction. Several case studies allow detection of ECG mimics of infarct (bundle branch block, ventricular pacing, etc.). Selected screens from "12 Lead ECG Interpretation" are used as review when needed. Case studies focus on the ECG findings during actual clinical scenarios related to coronary artery disease (including acute closure after PTCA leading to bypass surgery) and valvular heart disease.

AccountMaster
Account management system for dental laboratories
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.

AccountMaster is an invoice, statement and accounts receivable program designed exclusively for small dental laboratories. Work can be entered as it is received or can be written up when completed. The program includes features designed to minimize typing by clicking on products in the Prices window, and the product or service description and price are entered on the open invoice. With multilevel pricing, each dentist can be assigned any one of five different price levels. AccountMaster was carefully developed for ease of use with non-computer users in mind while utilizing the speed and power inherent in the program. Invoices can record complete patient information. Invoices can be printed individually or by group from one menu choice. Statements will handle any number of individual invoices from one to literally hundreds, and can be prepared for one dentist or all accounts for the month. Sales can be viewed on screen or printed to evaluate monthly sales by dentist. Another feature allows the user to count the number of restorations, such as PFM crowns or DWTs of gold alloy for a given period. The integrated letter writing feature enables laboratories to easily send a letter, such as a new product announcement to all accounts. One or several dentists can be designated to receive another letter, such as a late payment notice. The program uses three-part carbonless paper with the ImageWriter or the AccountMaster Laser form with the StyleWriter II or LaserWriter printers.

Care4th Pro
Medical record and clinical database system
Macintosh with 3 MB of RAM; hard disk drive; PowerBook-sized display or larger.

Care4th is a comprehensive medical record and clinical database environment. Progress note entry is accomplished faster than by dictation, through user-customizable templates, prompts and choice lists. Users can scan for interactions, allergies and "warning diagnoses." Users can define criteria for tests and interventions, and then determine for which interventions any patient is due. Virtually every aspect of medical documentation is elegantly handled. This physician-designed program can truly revolutionize the way users manage clinical information, allowing them to feel in total control. Available modules even handle handouts for patients and images. Care4th uses an interface totally familiar to physicians. It can be used by solo practices, as well as larger groups. It is compatible with 4D Server.
$2,699 retail; single user

Center Psych
Billing and office integration for the psychiatric office
Macintosh LC III or larger; 4 MB of RAM.

Center Psych automatically organizes and manages information central to a psychotherapy office. Automatic printouts include insurance forms, patient statements, past-due summaries, patient billing histories, referral analyses and anticipated earnings reports. Center allows line-item detail posting for each reported procedure. Estimated co-payments can be automatically billed in the current month or actual co-payments can be billed after the insurance companies have paid. Extensive automatic defaults and validation tests accelerate use and increase accuracy. Center can also provide several optional "levels" of added features, which can electronically integrate a user's office to higher degrees. It's ideal for an office of any size.
$695 retail; enhanced basic level
$225 and up retail; electronic office modules

■ **Chiro-Practice**
Chiropractors office tool
Macintosh Plus or larger; FileMaker Pro runtime.

Chiro-Practice offers a perfect and practical office computer tool for chiropractors who don't need programs costing thousands of dollars. Its basic files include: Clients (patient records and billing, plus labels, envelopes and personalized letter formats); Letter Template (stores correspondence); ICDA Codes (procedures and costs); Day Tracker (daily appointments); and Year At A Glance (schedules vacations and professional meetings). This program also can print billing data on HFCA 1500 insurance claim forms, and can even remember birthdays. It was developed and designed jointly by a practicing chiropractor and a computer expert with a goal of avoiding excess data that can slow down or confuse the user. It is easy to learn and use, sensibly practical and the budget-priced way to intelligently organized patient files.

Simplified; 642 E. Squirrel Tail Dr.; Tucson, AZ 85704; 602-797-2990 or 602-797-7865 (fax)

Chiroglyphics 2.2
Medical management for chiropractics
Macintosh with 5 MB of RAM; 80 MB hard disk drive.

Chiroglyphics, based on the 4th Dimension client-server environment, is an accounts receivable management package for use in physicians' offices. It emphasizes communications, including electronic

filing, while also handling insurance claim form preparation, billing and collections, procedure analyses, aged account analyses and HMO analyses. The system supports multiple sites, multiple patients per account and multiple fee schedules, making it at home in private, HMO or PPO settings. A standard insurance form may be generated at the time of each patient visit. Claims may be refiled automatically. Integrated word processor, appointment scheduler and spreadsheet are optional. Chiroglyphics is compatible with 4th Dimension-based general ledger, payroll and other general business packages from other vendors.
$3,995 retail; single user (site licenses are available)
Medformatics Inc.; 1306 Ft. Bragg Rd.; Fayetteville, NC 28305; 910-323-1748, 800-745-1767 or 910-323-1534 (fax)

ChiroMac
Chiropractic office management
Macintosh SE/30 or larger; 5 MB of RAM; hard disk drive.

ChiroMac is a completely integrated chiropractic office management system. It can be used in a single or multiuser environment and is designed to automate patient accounts receivable and insurance information. An on-screen ledger system handles account transactions, payments, billing statements and the printing, tracking and follow-up of insurance claims. Individual finance charges can be assigned and calculated, and the aging of accounts can be done automatically. ChiroMac contains a built-in letter processor and can generate encounter forms and more than 60 practice management reports. A narrative generator helps cut time spent on repetitive paper work. The system also stores treatment plans and can track patient progress, along with any needed notations. All data within the ChiroMac system can be merged with other Macintosh applications. Optional appointment scheduling and electronic insurance claims modules are also available. Complete training and technical support programs can be provided.
$1,995 to $3,495 retail; single user to multiuser
HealthCare Communications, Inc.; 300 S. 68th, Ste. 100; Lincoln, NE 68510; 402-489-0391, 800-888-4344 or 402-489-6411 (fax)

CIBS For Mental Health Practitioners
Mental health management
Macintosh Plus or larger; hard disk drive; Claris FileMaker Pro 2.0; System 6.0.4 or later.

CIBS (Client Information and Billing System) automates the information and billing processes for psychologists, psychiatrists and social workers. The system uses five database modules — Client Information, Client Billing, Codes, Therapists and Insurance Companies — to manage the practice. If desired, CIBS supports personalized client billing for each therapist in the practice. DSM-IIIR diagnostic codes are fully supported. Users may address billing statements to the client or to other parties. Several automated processes are built into the system, including monthly billing, daily insurance billing, daily activities, practitioner account balances, insurance balances, client summary and client visits. Insurance billing can be handled by percentage or contractual methods and several standard insurance forms are included in the system, including HCFA 1500, U.S. Behavioral Health and American PsychManagement, Inc. Multiusers are supported under FileMaker Pro on LocalTalk or Ethernet.

■ **Clinical Pharmacology**
Teaching and reference guide
Macintosh Plus or larger; 20 MB of free hard disk space; color video monitor (16-bit color recommended); CD-ROM drive.

Clinical Pharmacology is an electronic reference and teaching guide to the most common and classic drugs in current use. Concise, clinically-oriented information, written specifically for an electronic format, is available for hundreds of drugs and is accessible in a variety of unique approaches. Abbreviated monographs are available for thousands of less common and combination drug products. Clinical Pharmacology offers an interactive point-and-click interface. Navigation through the material is facilitated by extensive indexing and cross referencing, which allows the user to take full advantage of the software environment. Chemical structures, color images and drug-cost information of frequently used dosage forms, along with a testing feature and patient records feature add to the utility of a program for all health care educators and practioners.
$295 retail; including quarterly updates

■ **The Complete Human Anatomy**
Accurate line drawings of human anatomy
Macintosh Plus or larger; 2 MB of RAM; CD-ROM drive.

The Complete Human Anatomy is a concise and comprehensive collection of accurate line drawings of human anatomy. Featuring almost 1,000 illustrations (composed of more than 8,000 separate elements in the EPS format), The Complete Human Anatomy covers major systems of the human body: the building blocks, the nervous, muscular, skeletal, cardiovascular, respiratory, digestive, urinary and reproductive systems, the senses, the endocrine system and the stages of growth and physical development. The 600 dpi TIFF images can be output to any device supporting bit-mapped printing with maximum quality. The EPS format allows the images to be output at any resolution on any PostScript-capable device. The Complete Human Anatomy comes on one CD-ROM with a complete printed thumbnail picture index, as well as a comprehensive name reference index.

CQI-Med
Automates all aspects of CQI (Continuous Quality Improvement)
Macintosh II or Quadra family; 4 MB of RAM; 40 MB hard disk drive.

CQI-Med is a Continuous Quality Improvement (CQI) software product designed to automate all aspects of CQI, from data collection to reporting. The product monitors and feeds back quality control information at up to four levels: Corporate, Division, Hospital or Clinic, and individual physician provider. Reporting for any combination of levels is a hands-off operation, which can save many hours of data collation. CQI-Med is suitable for those health care organizations that are mandated to control quality or that voluntarily engage in quality control activities.

Delta Patient Management/Billing System
Medical management and billing
Macintosh LC or larger; hard disk drive; Omnis 7.

The Delta System is an integrated program that performs medical appointment keeping, record storage, epidemiology, case management and billing. The medical billing section allows two third-party payers per invoice, sliding-fee scales, multiple insurance billing schedules, CPT modifier codes, prints on HCFA-1500 (1990) forms and supports RBRVS. Amount due on invoices is automatically carried over and billed to secondary insurance carriers. Patients may be sent one bill per invoice or a superbill. The superbill option supports both patient or family billing. Payments may be posted to the invoice or line item. Positive balances and allowable fees are supported. Payment analyses include: age accounting of invoices by patient, clinic doctor and insurance company; and the calculation of the percentage of payment by different carriers. The patient management section can generate a wide range of reports, including analysis of the number of referred patients, generation of clinic reminder labels, calculation of clinic attendance ratios, calculation of patient attendance ratios and the automatic rescheduling of failed appointments. Audit trail is available for tracking staff invoice and payment deletions.

Delta Presbycusis And Hearing Handicap Calculation
Calculates handicaps in patients with hearing loss
Macintosh Plus or larger; hard disk drive; Omnis 5.

The Delta Presbycusis and Hearing Handicap Calculation is used to calculate handicaps in patients with hearing loss. Users may select from six different handicap formulas (including AAO-1979, AAOO-1959 and NIOSH). Patient audiometric data may be entered into the program and stored. The program has the following functions: using Spoor's or Robinson-Sutton's equations, the hearing loss from presbycusis is calculated for each audiometric frequency (the percentage of the handicap due to presbycusis and the percentage due to non-presbycusis is displayed); the patient's hearing can be projected, by use of Spoor's equations for any future date; and the effects of presbycusis can be subtracted from the audiometric data (the data can then be redisplayed and the hearing handicap calculated).

Dental InfoManager
Dental practice management software
Macintosh LC III or larger; 8 MB of RAM; 80 MB hard disk drive; ImageWriter II or LaserWriter.

The Dental InfoManager is a complete practice management system designed to help dental practices with their administration, marketing and patient health care management. It is a flexible, modular software product containing a fully relational database that is designed to allow quick and easy access to practice information. It makes full use of the Macintosh's ease of use and intuitive approach. The software supports patient accounts receivable management, insurance processing, statement billing, recall management and follow-up tracking. Other functions include insurance estimation, referral tracking, patient profiling, marketing analysis, treatment planning, special medical billing and all payer electronic claims. The software also has an integrated word processor that can produce form letters with merged data from the patient database and provide quick letter writing from anywhere in the software. A complete set of financial, management and marketing reports are easily printed and a flexible report generator lets users design custom reports. The software supports both single-user and networked, multiuser configurations and offers full LaserWriter support.

■ **DentalEase**
Dental office administration
Macintosh SE/30 or larger; 4 MB of RAM; System 6.0.2 or later; hard disk drive.

DentalEase automates the routine administrative functions of a dental practice. Ease of use and one-time patient information entry are key features. Patient medical/dental problem alerts are provided. Billing is routed automatically to the responsible person or insurance company. Dental codes and procedures are pre-entered following standard insurance formats. Office standard charges are entered one time and are automatically posted when procedures are entered, but are adjustable on a case by case basis. Procedures are entered by selecting from a list, then printed by pressing one button, showing both the day's total and grand total. DentalEase handles multiple provider offices, generates patient receipts, monthly statements and multiple financial reports. DentalEase can be customized. It is Helix based.

DentalMac
Dental office management
Macintosh SE/30 or larger; 5 MB of RAM; hard disk drive.

DentalMac is a completely integrated dental office management system that can be used in a single or multiuser environment. This automation system is easily upgradeable and is designed to grow with a user's practice. The new DentalMac LE handles account transactions, billing statements, reports, word processing, insurance processing and statement generation. DentalMac SE offers all this, plus a multiple-user configuration, an integrated word processor, a narrative generator, a prescription writer, a flow sheet generator, system utilities and optional modules for scheduling and electronic insurance claims transmission. DentalMac F/X offers scheduling and electronic insurance claims transmission as standard features and includes additional electronic clinical features, such as exam cards, voice annotation, voice-driven dental charting, treatment planning and intraoral dental imaging. DentalMac utilizes Apple's Data Stream Protocol for fast, efficient operation over either a LocalTalk or EtherTalk network.

DL5
Dental laboratory management system
Macintosh Classic or larger; 40 MB hard disk drive; ImageWriter or LaserWriter.

DL5 is designed for the management of dental laboratories of any size. Its straightforward, intuitive layout can be customized to meet the needs of individual users. Case data need only be entered once to generate work tickets, schedules, invoices and statements. The system keeps precious metals inventory, prints quality evaluation forms, and includes many concise business reports. Doctor preferences, which can be entered for each dentist, appear automatically on the work tickets. Features include: work ticket displays shade information visually; and invoice graphically displays what work has been done on a particular case.

Dynacath's Critical Care Patient Simulator
Provides "hands-on" experience in patient management
Macintosh computer with color display; 20 MB hard disk drive; Kurta input tablet.

The Dynacath's Critical Care Patient Simulator is designed for training and certification in the management of critical care patients and interpreting hemodynamic data. The Macintosh displays patient histories, progress notes, consultations, study options and results, and a cardiac monitor. Patient responses change based on the treatments selected. A torso apparatus that connects to the Macintosh is used to practice right heart catherization, with real-time simulation of rhythms and arterial and catheter pressures. Instructors may create their own library of informative cases, or make use of the many demonstration cases provided. Actual monitor strips may be incorporated into a case by tracing on a digitizing tablet. Color and System 7 are supported.

■ Emergency Department Clinical Information System
Department-level information system
Macintosh Quadra 610 or larger; 8 MB of RAM; 160 MB hard disk drive.

Orca's ED/CIS is a comprehensive department-level information system designed to meet modern technology requirements for a state-of-the-art hospital emergency department. ED/CIS supports a wide range of functions for the ED and is capable of integrating with other hospital information systems, such as registration, order/entry, transcription and charge entry/billing. ED/CIS's unique graphic user interface makes it easy for staff to begin working immediately with a minimum of training. ED/CIS is a modular system, allowing users to mix and match the components to their particular needs.

The Family Doctor, 3rd Edition
Answers to the 2,000 most commonly asked health questions
Macintosh Plus or larger; 2 MB of free RAM; color requires color display with 32-bit QuickDraw; System 6.0.7 or later; CD-ROM drive.

The Family Doctor provides comprehensive and easy-to-understand medical information to assist in making decisions on a medical diagnosis and treatment, the use of prescription drugs and the basics of human anatomy. With answers to the 2,000 most commonly asked health questions and 300 illustrations, The Family Doctor addresses subjects related to disease, injury, illness, infection, accidents, general fitness and nutrition. It includes an animated first aid section for fast understanding of emergency procedures and an anatomy section with video explaining how the body systems work. Plus, a consumer guide to more than 1,600 prescription drugs outlines brand and trade names, dosages, side effects, possible interactions between specific drugs and warnings related to activity and food intake while taking medication. Health update booklets provide detailed information on a variety of common problems, as well as complete listings of local and national information resources for those who want to know more.

Front Office
Complete billing and claim management for all medical-related practices
Macintosh Plus or larger; hard disk drive.

Front Office is a practice management system designed to maintain the scheduling and billing operations of a medical office. Line item accounts receivable and claim management are backed up with extensive practice and financial analysis reports, a recall tickler module with custom letters, scheduling for multiple providers with time analysis and conflict reporting. Front Office supports multiple locations, multiple providers and revenue centers, inpatient and recurring billing, appointment billing, bar-code readers and more. It prints walkout superbills, Medicare, HCFA 1500 and HCFA 1450 (UB-82) and supports OCR and electronic claims. Financial data is exported in a variety of formats supporting most General Ledger accounting packages. Special configurations for optometric, nursing and inpatient and outpatient clinics are also available.

Genetics Information System
Assists research and clinical geneticists
Macintosh Classic II or larger; 2 MB of RAM.

The Genetics Information System (GIS) provides easy database retrieval of patient history and saves physicians' valuable time when looking for cross-referencing data and matching family histories. It is designed specifically for clinical and research geneticists. Forty-nine basic screens document and catalog patient/family demographics and insurance information, prenatal/neonatal history, physical examination findings, laboratory studies findings and diagnosis, counseling and references. Forty-seven extensive tables of findings contain more than 1,450 physical conditions and abnormality descriptors. Additional descriptors can be added. GIS performs searches throughout the database, with every data element eligible. Other features include: built-in demonstration mode; data retrieval by viewing screens or a variety of reports; produces mailing labels; an extensive user's manual; comprehensive help screens; and two security

levels (one password to open GIS and second one to change data tables).

HealthLedger
General Ledger and Accounts Payable
Macintosh Plus or larger.

HealthLedger integrates a General Ledger with Accounts Payable for health care professionals. Users can enter payments, print checks and reconcile multiple bank accounts. HealthLedger keeps track of check numbers and automatically makes debit and credit adjustments. Three months can be open at a time, transactions can be modified until the month is closed and adjustments can easily be made to any month in the current year. HealthLedger also provides recurring entries. Financial reports include Balance Sheet, Trial Balance, Income Statement, Transactions Journals, General Ledger, aged Accounts Payable (with variable aging periods), prior year comparisons and more. Multiple reports can be printed with one command. Full import/export (including transactions) is built in, and HealthLedger imports data from MacHealth Series applications. HealthLedger prints directly on 1099 forms. HealthLedger can be customized for a variety of check and statement formats and printers. Payroll checks (including employer tax liabilities) created with CheckMark's Payroll program can be posted directly into HealthLedger.

Hospital Unit Information System
Patient databases, care plan generators, hospital unit managers and nursing resource controllers
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; network capabilities if desired; laser printer; System 6.0.7 or later.

This multidisciplinary hospital unit information system handles all the computer and paperwork needs of an inpatient hospital unit or outpatient clinic. All of the forms users have designed for their unit and are currently using can be incorporated into this system: Intakes, reservations, admitting office forms, nursing assessments, graphics, Social Service assessments, Activities Therapy assessments, report sheets, rounds boards, staff assignments, problem-oriented progress notes, etc. All forms will print from a laser printer. This customized hospital unit information system can help a facility meet JCAHO, HCFA, Minimal Data Set and all other standards, regulations and requirements. On-screen prompts assist a healthcare team in collecting assessment data and writing better care plans based on approved NANDA nursing diagnoses. Standards of care can be modified to meet a facility's specific needs and individualized to each patient. This program assists a staff in addressing biophysical, psychosocial, environmental, self-care, educational and discharge planning needs of patients. The system can grow as needed. Studies show that admissions take less time while quality and accuracy of documentation is increased. When filling out forms, typing is minimized through an easy-to-use, point-and-click graphical interface.
$600 retail; includes basic package, needs assessment, free telephone support and a 30-day money-back guarantee

Medical information database
Macintosh Quadra 610 or larger; 8 MB of RAM; 160 MB hard disk drive; 13-inch monochrome monitor; Ethernet card.

Hyper-EDDI is an easy-to-use, computerized ED discharge instructions system. Its textural database of patient instructions is rich and comprehensive. Hyper-EDDI's unique graphical user interface makes it easy for staff to begin working immediately with a minimum of training. Discharge instructions are easily editable. Hyper-EDDI is the core for a large variety of linked modules that can greatly enhance the power of an ED computer system. Modules are easy to add and integrate completely. By mixing and matching modules, users can build an Emergency Department Clinical Information System (ED/CIS) that is customized to individual needs.

Iliad 4.2
Computer-based diagnostic and treatment tools for internal medicine and family practice
Macintosh with 6 MB of RAM and 68030 processor or larger; math coprocessor strongly recommended; 20 MB available hard disk space.

Iliad software allows users to use Iliad as an expert decision support tool in consultative, critiquing, browsing and simulation modes. In the consultation mode, Iliad helps users workup actual patients on whom they have collected data, as well as provides them with access to the medical logic behind the decision-making process. In Iliad's critique mode, users begin with an initial diagnosis or hypothesis and Iliad will prompt them for the specific data needed to either confirm or rule-out the hypothesis. Iliad will often suggest alternative diagnoses. In the browsing mode, users may explore Iliad's knowledge base and literature. Iliad also provides users with a simulator mode where a wide variety of cases are presented and users are challenged to uncover the diagnosis. The simulator provides scored feedback on both the user's diagnostic and workup efficiency skills and gives users an opportunity to deal with many cases that they might only seldom encounter in practice. New features include treatment frames for each diagnosis. Iliad's knowledge base covers more than 2,400 diseases/syndromes.
$995 retail; Physician single-user fee
$195 retail; Medical Student/Resident single-user fee

Joey Software For Dental Office Management 7.0
Dental office management
Macintosh SE or larger; 2 MB of RAM; hard disk drive; PostScript LaserWriter.

Joey Software For Dental Office Management brings big-system features to any size office. One-time entry of charges, payments and adjustments will generate more than 80 standard reports and practice analysis profiles (an unlimited number of reports can be obtained by using the ad hoc report generator). The program automatically tracks treatment, referrals, insurance and recall. It handles multiple interest options, fee schedules and treatment plans. There are complete audit trails and data verification for all files and system totals. Responsible party billing allows a user to connect a patient file to more than one account for accurate accounting of capitation and government assistance programs. It is able to track forms and assign payment responsibility on the basis of carrier type. Submitted claims are tracked and aged by date, patient and carrier. Electronic claim submission, word processing and on screen appointment scheduling are included at no extra cost and the first year of toll-free support is free.
$3,995 retail
$500 retail; each workstation
Joey Software, Inc.; 4954 Lincoln Dr.; Edina, MN 55436; 612-926-0238

Joey Version 7 Canadian Version
Dental office management
Macintosh LC III or larger (offices that use scheduling require Macintosh Centris or larger); 8 MB of RAM; 80 MB hard disk drive; LaserWriter.

Joey automates daily tasks, ages account balances, generates concise business reports and is CDAnet certified. Joey not only tracks recalls but will display every phone number associated with each account and, with a click of the mouse, will dial the telephone. A built-in word processor with mail-merge capability allows users to print correspondence without having to use any other software. Joey's fully integrated scheduler provides automated scheduling that genuinely rivals "The Book." It allows different time units for different operatories, tracks provider time and cuts-and-pastes changed appointments quickly and easily. Joey is fully Canadian.

Knowledge Finder For Medline And Cancerlit
Searches the National Library of Medicine's (NLM) Medline and Cancerlit databases (distributed on CD-ROM optical disc), specialty databases for pathology, radiology, cardiology, orthopedics, surgery/anesthesia, obstetrics/gynecology, pediatrics, neurology and ophthalmology
Macintosh Plus or larger; external disk drive or hard disk drive; Apple, Toshiba or compatible CD-ROM drive; ImageWriter or LaserWriter.

These Products Available Through Bottom Line Distribution
1-800-347-1923

The Knowledge Finder searches the National Library of Medicine's (NLM) Medline and Cancerlit databases using a sophisticated, end-user bibliographic retrieval system. Searches can be constructed using sentence-style, natural language input and search results are ranked by likelihood of relevance. The Medical Subject Heading (MeSH) thesaurus provides a hypertext tool for identifying medical terminology useful in searching. A single Knowledge Finder CD-ROM disc contains up to 300,000 fully indexed citations, many with abstracts. The citations reflect articles published in approximately 3,400 international biomedical journals. Databases are available for both clinical and academic/research use, with up to 10 years of citation data on a single disk. Specialty discs are available for pathology, radiology, cardiology, orthopedics, surgery/anesthesia and obstetrics/gynecology. It is also available for PCs and compatibles.
$395 to $5,595 retail; annual subscription (network license and software are also available)
Aries Systems Corp.; 200 Sutton St.; North Andover, MA 01845; 508-975-7570 or 508-975-3811 (fax)

Knowledge Server For Medline And Cancerlit
Biomedical literature search system for network access
Macintosh Plus or larger; AppleShare 2.0.1.

Medline is a database of citations to the biomedical literature and is maintained by the National Library of Medicine, U.S. Department of Health and Human Services. The complete database contains citations to approximately 3,700 medical journals. Portions of the database are selectively extracted for publication on CD-ROM by Aries Systems. Knowledge Server uses Aries' Knowledge Finder software to provide access to the Medline CD-ROM databases across local-area networks. In addition to using the AppleShare network manager, Knowledge Server uses the AppleCD SC or compatible CD-ROM player. It is also available for PCs and compatibles.
$2,795 to $5,495 retail; annual subscription
Aries Systems Corp.; 200 Sutton St.; North Andover, MA 01845; 508-975-7570 or 508-975-3811 (fax)

■ **Lab Test Stack**
Lab test standards
Macintosh Plus or larger; 2 MB of RAM; HyperCard 2.0 or later; System 6.0.7 or later; hard disk drive.

Lab Test Stack is designed for nurses, nurse managers, nursing educators and nursing students. Lab Test Stack contains standard adult values and nursing implications of more than 50 laboratory tests in the easy-to-use HyperCard format.
$30 retail
MacNursing Software; 165 Outrigger Dr.; Vallejo, CA 94591; 415-281-5883

Lung Cancer Staging: A Tutorial
Lung cancer staging tutorials
Macintosh Plus or larger.

Lung Cancer Staging: A Tutorial is designed for radiologists, chest physicians, surgeons and oncologists concerned with the diagnosis or treatment of lung cancer. It provides a visual introduction to the International TNM classification for Staging Lung Cancer and the American Thoracic Society's Lymph Node classification. It is ideal for trainees in these fields, as well as for practitioners who have not yet learned these important classifications in detail or wish to review these important concepts. The program is divided into three major parts: Tutorials, Quizzes and Management.

M.E.D. Billing
Medical practice billing and accounting system
Macintosh Classic or larger; 4 MB of RAM; System 6.0 or later.

M.E.D. Billing is a comprehensive medical practice billing and accounting system designed for outpatient and clinical use. Designed to accommodate both single and multiuser access, M.E.D. Billing also integrates with M.E.D. Patient for the transfer of patient data into medical records. M.E.D. Billing can also function fully as a stand-alone billing system. Based on the Family billing concept, M.E.D. Billing provides for multiple primary, secondary and tertiary guarantors, multiple schedules of fees, HCFA form printing, as well as standard practice bills and open-item accounting. Automatic bulk receipting with pay-in slip preparation and user flexible reporting are provided, along with ICD and CPT codes.
$2,850 retail; single and multiuser versions are available
JAM Software USA; PO Box 4036; Meriden, CT 06450; 203-630-0055, 203-686-1900 (fax), Int. + 612-550-0884 (Australia) or 612-564-3353 (fax)

Mac Psych Billing Version 2
Automates billing process
Macintosh Plus or larger; FileMaker Pro 2.0.

Mac Psych Billing is a FileMaker Pro 2.0 application that automates the billing process for psychiatrists, psychologists and psychiatric social workers who are in private practice. The program automatically looks up DSM-IIIR diagnoses, CPT-4 procedures and includes the new HCFA 1500 form for quick processing. Various monthly, daily and aged reports can be printed using customized scripts. The program is flexible enough to be used for weekly or monthly billing cycles. The program now includes the ability to store clinical notes, an appointment file and a General Ledger to post daily transactions. Mac Psych Billing has been updated to take advantage of the new feature set found in FileMaker Pro 2.0.

MacMed
Medical office management
Macintosh Plus or larger; hard disk drive; ImageWriter, LaserWriter or StyleWriter.

MacMed is a medical office management program designed for practices with one to 12 physicians. Features include: patients, procedure codes, diagnostic codes and insurance information limited only by hard disk size; diagnosis tracking on patients; multiple insurance carriers for each patient; user-defined codes for procedures and diagnoses; prints most standard health insurance claims forms; electronic submission of claims (depending on location); automated printing of monthly bills; accounts receivable and aging accounts; appointment scheduling with double booking; patient recalls and chart checks; mail merge capability with Microsoft Word; and more.
$2,250 retail; single user
$3,450 retail; multiuser up to three stations ($250 per station over three)
$400 retail; electronic billing (in some locations)
NewHouse Medical Systems; 50 S. 18th St.; Easton, PA 18042; 610-252-0548, 800-323-3002 or 610-559-7677 (fax)

MacNurse
Admission/plan of care system for nursing homes
Macintosh 512K or larger; external disk drive or hard disk drive; Multiuser Omnis 3 Plus (if multiuser system).

MacNurse is an admissions and plan of care system for nursing homes that is designed to make efficient use of the data input by a facility's office staff, as well as accommodate personnel data management. Users can enter physicians' orders and notes and can update or chart the progress of these. The system will write standard orders automatically and contains an option to change the orders at any time. The package includes customization and training of two office personnel.
$500 retail; single user with run time
$1,500 retail; multiuser
H&D Leasing; PO Box 1137; Clovis, NM 88101; 505-762-4139 or 505-769-3711 (fax)

MacOn-Call
Modifiable medical diagnostic expert system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

MacOn-Call is a diagnostics tool for health care providers. The software is an open expert system with data format for medical practitioners. It relates findings, links information for rapid, yet comprehensive analysis and represents symptoms, signs and studies for diagnoses. Probability adjustments rank and refine the differential to fit observations. The program quickly and dynamically integrates knowledge into relational structures that assist clinical assessment. Automatic report generation combines case notes with the evaluation and portrays causal reasoning. Every aspect of the knowledge base is modifiable to customize the application for specialty needs or courseware. Though not intended to supplant sound judgment, it is a great review and teaching tool that sharpens history taking and physical examination skills for cost effective work-up.

MacRepertory
Integrated medical program for homeopathic practitioners
Macintosh Classic through Quadra; 2 MB of RAM (4 MB with System 7 recommended); 7 MB hard disk space.

MacRepertory is an integrated medical program for homeopathic practitioners that allows a user to quickly collect and analyze dozens of symptoms, check the built-in Materia Medica to confirm and evaluate the most likely remedies and then save the case for research or to share with a colleague. In its deductive mode, the program analyzes the symptoms as they are entered and suggests questions to confirm the likely remedies.
$1,799 retail

MacSurgery CD-ROM, Series I, "Laparoscopic Cholecystectomy"
Multimedia program designed to bring this surgical procedure from the operating room to the office
Macintosh II or larger; 5 MB of RAM; hard disk drive; 13-inch color monitor; QuickTime 1.5 or later; HyperCard 2.0 or later; System 7.0 or later; CD-ROM drive.

MacSurgery CD-ROM, Series I, "Laparoscopic Cholecystectomy" is a multimedia program designed to bring this surgical procedure from the operating room to the office. A surgeon could review anatomy, instrumentation, complications and obtain a complete overview of gall bladder disease and the surgical procedure. Many video clips are available to illustrate the text. These can be individually controlled and can be shown frame by frame. One of the chapters is devoted to information designed for the patient. He or she could sit down with this chapter on the screen and obtain a complete overview of gall bladder disease and the surgical procedure. There is extensive documentation and discussion of such subjects as laser physics and the potential complications of laparoscopy. These, plus an extensive bibliography, can be printed to provide hard copies. There are about 500 MB of files on the CD-ROM.
$199 per volume retail

Med-Manager
Medical management
Macintosh SE/30 or II family; System 6.0.4 or later.

Using the Med-Manager database software, users create patient information files, CPT codes and charge files. With these, it is simple to create all of the forms needed for a practice, including invoices, statements, appointment reminders, health insurance claim forms and others. Most of the data from the database files can be imported into the accounting software using customized templates. This feature eliminates many hours of data entry into Accounts Receivable, Accounts Payable and General Ledger. Customization of the accounting software is available. An optional communications module is offered, which permits a physician to electronically transmit the health insurance claim forms. This proprietary module converts the database files to meet the specific protocol requirements for transmission directly to the insurer.

Medformation 3.1
Physicians' office management system
Macintosh with 5 MB of RAM; 80 MB hard disk drive.

Medformation, based on the 4th Dimension client-server environment, is an accounts receivable management package for use in physicians' offices. It emphasizes medical communications, including electronic filing, while also handling insurance claim form preparation, billing and collections, procedure analyses, aged account analyses and HMO analyses. The system supports multiple sites, multiple patients per account and multiple fee schedules, making it at home in private, HMO or PPO settings. A standard insurance form may be generated at the time of each patient visit. Claims may be refiled automatically. Integrated word processor, appointment scheduler and spreadsheet are optional. Medformation is compatible with 4th Dimension-based general ledger, payroll and other general business packages from other vendors.
$3,995 retail; single user (site licenses are available)
Medformatics Inc.; 1306 Ft. Bragg Rd.; Fayetteville, NC 28305; 910-323-1748, 800-745-1767 or 910-323-1534 (fax)

Medformation TheCoder
Helps determine the proper evaluation and management procedure code
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Medformation has created a program that will allow physicians and their staff to easily communicate the complex analyses now required to determine the proper evaluation and management procedure code. These are the codes that are needed to determine the level of compensation received from third-party carriers. With the simple checklist provided on the fee slip, the provider indicates the proper level of History, Examination and Complexity. The fee slip is then attached to the chart and the staff, using TheCoder, hit matching buttons on the screen and the proper code is supplied. TheCoder provides the logic and precision that is being looked for by third-party auditors. The use of TheCoder will be invaluable and may allow the provider to reconstruct the logic used in determining a code in case of an audit.
$195 retail; single user
Medformatics Inc.; 1306 Ft. Bragg Rd.; Fayetteville, NC 28305; 910-323-1748, 800-745-1767 or 910-323-1534 (fax)

Medical Electronic Desktop (M.E.D.)
Medical record and diagnostic support system
Macintosh Plus or larger, including PowerBook; 1 MB of RAM.

The Medical Electronic Desktop (M.E.D.) has been designed for the medical practice or primary health care provider. In essence, M.E.D. is a fully functional medical record (charting) system with a decision support facility to allow symptoms to be checked against a disease/illness knowledge base to provide diagnostic support. M.E.D. includes drug/drug and drug/pathology checking, has full graphics and a standard file of checklists and protocols that can be modified to suit specialized requirements. The Knowledge Bases and form letters can also be customized, and M.E.D. provides a simple structure for the extraction of research data from the database. The M.E.D. system is a comprehensive desktop instrument for the health care professional, providing reference material, medical records, drug data, checklists, anatomically correct graphics and integrated word processing facilities.

Medical InfoManager
Medical practice management software
Macintosh LC III or larger; 8 MB of RAM; 80 MB hard disk drive; ImageWriter II or LaserWriter.

The Medical InfoManager is a complete practice management system designed to help medical practices with their administration, marketing and patient health care management. It is a flexible, modular software product containing a fully relational database that is designed to allow quick and easy access to practice information. It makes full use of the Macintosh's ease of use and intuitive approach. The software supports patient accounts receivable management, insurance processing, statement billing, recall management and follow-up tracking. Other functions include referral tracking, patient profiling, marketing analysis, treatment planning and all payor electronic claims. The software also has an integrated word processor that can produce form letters with merged data from the patient database and provide quick letter writing from anywhere in the software. A complete set of financial, management and marketing reports are easily printed and a flexible report generator lets users design custom reports. The software supports both single-user and networked, multiuser configurations and offers full LaserWriter support.
$1,499 to $8,999 retail; depending on modules purchased
Affinity Software Corp.; 1600 Boston-Providence Hwy.; Walpole, MA 02081; 508-668-7800 or 800-437-4307

Medical Master — The Doctor's Workstation
Medical office and clinical patient management
Macintosh LC or larger; 80 MB hard disk drive; 12-inch monochrome monitor; laser printer.

Medical Master is a complete computer environment for medical practice. Clinical functions, such as prescription writing, lab requisition generation and referral letters are all built in, as is an integrated word processor, which draws upon the patient's clinical and administrative data for fully automated correspondence, and to build electronic chart with minimal transcription. Scheduling for one or more physicians with a sophisticated Find function actually eliminates the appointment book. Flexible billing, receivables management and comprehensive financial reports are included. Medical Master features complete and easy analysis of clinical data, with detail available to the level of an age-sex distribution of patients with hypertension taking beta blockers. All searches can be mail merged to support clinical analysis of practice marketing activities.
$4,975 retail; software license for one workstation, manuals and six months of technical support
$9,950 retail; minimum network license with six months of technical support
RTJ Corp.; 275 Wyman St., Ste. 210; Waltham, MA 02154; 617-890-8950 or 617-890-8960 (fax)

MediMac
Medical office management
Macintosh SE/30 or larger; 5 MB of RAM; hard disk drive.

MediMac is a completely integrated medical office management system that can be used in a single or multiuser environment. This automation system is easily upgradeable and is designed to grow with a user's practice. The new MediMac LE handles account transactions, billing statements, reports, letter processing, insurance processing and statement generation. MediMac SE offers all this, plus a multiple-user configuration, an integrated word processor, a narrative generator, a prescription writer, a flow sheet generator, system utilities and optional modules for scheduling and electronic insurance claims transmission. MediMac F/X offers scheduling and electronic insurance claims transmission as standard features and includes additional electronic clinical tools, such as voice annotation and digital photos and videos. MediMac utilizes Apple's Data Stream Protocol for fast, efficient operation over either a LocalTalk or EtherTalk network.
$2,495 to $7,495 retail; MediMac LE to MediMac F/X
HealthCare Communications, Inc.; 300 S. 68th, Ste. 100; Lincoln, NE 68510; 402-489-0391, 800-888-4344 or 402-489-6411 (fax)

Medisoft
Patient simulators
Macintosh 512KE or larger.

Medisoft Cardio-Baby and Respi-Baby are flight simulator-like patient simulations that require user intervention to diagnose and treat a variety of dynamic clinical conditions. Scoring that is built into Medisoft simulations evaluates a user's performance after each patient case. An explanation of score offers individual feedback. Medisoft simulations have an advantage of offering scoring capabilities to users. And, because the programs work in an accelerated time frame, it gives a real life sense of urgency to the patient's treatment.

MedQuest
Medical office automation and management
Macintosh II family, Quadra, Performa, Power Macintosh or workgroup server; hard disk drive; ImageWriter II, LQ or LaserWriter.

MedQuest is a medical office management system for a single or multiphysician office. The program handles the traditional medical office tasks of patient billing, insurance form preparation, daily reconciliation, appointments and electronic claims submission, as well as helps a user manage IPA patients and referral pool usage. MedQuest tracks all charges, receipts, billings, discounts, adjustments, capitation and expenses by doctor, carrier and procedure. The program provides unlimited patient problem list management and procedure tracking with recall for patients needing periodic procedures. It allows a user to list all patients with certain diagnoses, those needing specific procedures, those on any medication or combination of the above. The data file includes all 15,000 ICDM-9 diagnosis codes. Selected patients can also be sent a letter from the MedQuest letter file, which is user created and maintained. If the optional Omnis Program Language is purchased, MedQuest becomes an open library that a user can change as needed. Program alterations may also be made by the company.

MedVision
Medical visualization software package
Macintosh LC or larger.

The MedVision Modality Pak offers a modular medical visualization environment designed specifically for medical researchers. Users can view, measure, analyze and comprehend scanned diagnostic images using a powerful set of imaging tools. These include image processing functions, image measurements, pseudo-color enhancement, region of interest creation and propagation and many others. Users can directly access MR, CT, nuclear and other medical data; and maintain full data integrity of images by using the complete 16-bit data set created by medical scanning devices. Capabilities can continue to be enhanced with the addition of new modules. These modules can offer improvements to the existing capabilities or provide users with entirely new functionality. Evergreen will offer new MedVision Paks that will address other application areas, as well as upgrades to the modules in the Modality Pak. Evergreen also offers a Developer Toolkit to assist and encourage other software developers to create their own modules.
$895 retail
Evergreen Technologies, Inc.; Main St., PO Box 795; Castine, ME 04421; 207-326-8300 or 207-326-8333 (fax)

MedVision Nuclear Option Pak
Allows users to expand the capabilities of the MedVision Modality Pak with features for viewing and interpreting nuclear images
Macintosh LC or larger.

The MedVision Nuclear Option Pak allows users to easily expand the capabilities of the MedVision Modality Pak with new features for viewing and interpreting nuclear images. Users can animate a dynamic series, quickly step through a 3D study or select an appropriate color palette to emphasize critical data. It is designed to work in conjunction with the MedVision Modality Pak and uses QuickTime technology. The additional modules offer the ability to do single slice ciné animation, display QuickTime movies within MedVision, multiple slice snake ciné animation and control the image color palette. Slice cinés can be moved to other applications, or QuickTime animations

MedVision Viewer
Medical image viewing
Macintosh LC or larger; 8 MB of RAM.
The MedVision Viewer was designed to meet the unique image viewing requirements of the clinician. The emphasis is on flexible, easy-to-use viewing capabilities for a wide variety of medical images. Users can view and manipulate CT, MR, PET, SPECT and other medical images on their Macintosh computers. By directly accessing the complete 16-bit data generated by medical scanning devices, images can be manipulated using true Window and Level functions, magnification and pseudo-color enhancements. Users select from four versatile display modes: Proxy view, Single view, Multi view and Ciné view. They can quickly move between the display modes to allow for optimal interpretation of a dataset. Images from multiple modalities, as well as from multiple medical scanner vendors, can be viewed simultaneously to facilitate quick and accurate diagnosis from a single viewing station.

Model 310 Digital Impedance System
Multiple frequency tympanometry and acoustic reflex testing
Macintosh Classic or larger.
The Model 310 Digital Impedance System, designed for the hearing health care market, provides single and multiple frequency tympanometry; advanced acoustic reflex testing, including adaptation; eustachian tube functions; and more. It also provides a Start on Seal feature that significantly reduces re-tests arising from lost seals. The Model 310 provides all test data in a format that clearly distinguishes a user's professional diagnoses: easy-to-interpret, high-resolution waveforms and digital test data on 8.5 by 11-inch printouts; phase and magnitude measurements; tympanogram and acoustic reflex averaging; latency calculations; gradient calculations; susceptance and conductance plots; and more.
$5,295 retail; Model 310 only
$6,875 retail; with Quadra 605 8/160 and StyleWriter II

Model 322 Clinical Audiometer
Two-channel clinical audiometer
Macintosh Classic or larger.
The Model 322 is a two-channel audiometer with internal power amplifiers and high-frequency testing capability. It uses two digital waveform generators (DWGs), each of which can produce either pure tone or masking signals. Accuracy of intensity levels is maintained by internal self-calibration circuitry. Control of the Model 322 is via a Macintosh. The computer performs calculations and records test results while testing is in progress. Patient records can be stored on disk or printed as test reports. Stimulus and masking signal may be selected for either or both channels from the two DWGs or from the following external sources: microphone; tape inputs (A and B); or auxiliary inputs (A and B). Output to the patient is via earphones, bone vibrator, insert phone or sound field speakers.
$5,095 retail; Model 322 only
Virtual Corp.; 521 SW 11th, #400; Portland, OR 97205; 503-226-3000 or 503-228-2666 (fax)

Model 330
Otoacoustic emissions test instrument
Macintosh Color Classic, LC III, II or Quadra family.
The Model 330 is an otoacoustic omissions test instrument that utilizes Distortion Product Otoacoustic Emissions (DPOAEs) to perform these tests. Using any of the Macintosh II, LC III or Quadra family of computers or Color Classic as its operating platform, it is capable of measuring DPOAEs in the form of an audiogram. It incorporates the user-friendly interface of the Macintosh with the already-established reporting capabilities of other Virtual instrumentation, enabling an audiologist to run a complete clinic or laboratory from one Macintosh control station.
$9,000 retail
Virtual Corp.; 521 SW 11th, #400; Portland, OR 97205; 503-226-3000 or 503-228-2666 (fax)

Model 340 Probe-Microphone Instrument
Everything needed to characterize and fit hearing aids, print test results, etc.
Macintosh Classic or larger.
The Model 340 Probe-Microphone Instrument integrates everything needed to characterize and fit hearing aids, print test results and store data for future use, all in one convenient and simple-to-use system. The Model 340 computer screen displays a complete and immediate picture of all the information necessary for hearing aid adjustment within a patient's ear. It provides immediate, real-time waveform updates based on Fast Fourier Transform calculations. Other features include: storage of measurements on hard disk or floppy disk for later retrieval and analysis; an ANSI test-box option, which allows complete analysis of the electroacoustic characteristics of the hearing aid; a probe-microphone test that uses a reference microphone to ensure an accurate presentation in SPL of the pure tone or composite signal; and hard copy output.

MultiVet Management System
Veterinarian practice management system for large or small animal practices
Macintosh LC or larger; 4 MB of RAM; 40 MB hard disk drive; ImageWriter II; backup system is recommended.
The MultiVet Management System is a complete, integrated multiuser veterinarian practice management system. It manages client and patient records, recalls, treatment history, accounts receivable and payable, invoicing, scheduling, prescription and chart labeling, inventory control and purchase management. Options include an interactive formulary, an internal word processing/mail merge module, appointment scheduling and boarding management. Flexible invoicing allows client-level discounts, line-item discounts and total invoice discounts, with multiple doctors and patients per invoice. Invoicing automatically generates rabies certificates and prescription labels, then updates inventory status, recalls, treatment history and accounts receivable data. End of Period processing generates day sheets, deposit slips and provides distribution of income by doctor, treatment, inventory item and species. Inventory items are linked to treatments, and the inventory control system automatically generates detailed reordering lists and purchase orders per vendor. The purchasing management system tracks the status of multiple orders, updates inventory levels when shipments are received and prints checks in batch per vendor. This system keeps historical data for analysis and provides more than 50 different reports. The system is available in three levels, and each level has a single or multiuser version.
$495 to $3,995 retail; priced per functional level and per module
SoftQuest, Inc.; 8711 Burnet Rd., Ste. F68; Austin, TX 78758; 512-452-4500, 800-299-9991 or 512-452-2378 (fax)

MyVoice
For use with non-verbal patients; provides a verbal link to the world around them
Macintosh 512KE or larger.
MyVoice was designed to help the patient who will be intubated for a long time or has other speech difficulties. Using MacinTalk speech synthesis capability, MyVoice actually speaks for the patient. The Mac is mounted on a stand and brought to the patient's bedside. MyVoice provides eight screens of messages, each covering a wide range of topics relevant to ICU patients. The patient simply points to a message on the screen with the mouse or joystick and the Mac says it. If none of the messages are relevant, the patient can spell out his/her own message.
$250 retail

The New England Journal Of Medicine
Contains the New England Journal of Medicine (1991-1993)
Macintosh Plus or larger; 2 MB of RAM; color display requires 8-bit color, 32-bit QuickDraw and color monitor; System 6.0.5 or later; CD-ROM drive.
The "Journal," first established in 1812, is the oldest continuously published medical journal in the world. NEJM publishes the most important, previously unpublished, research results, and is now available with complete text and images. In addition, the special articles and opinion pieces express original viewpoints and ideas. The most important criteria determining the acceptance of articles for publication are originality, scientific soundness and interest to both practitioners and researchers. Because NEJM is a weekly publication, the disc will be updated every six months.

Omni-Med
Medical management
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; ImageWriter or LaserWriter; Omnis 7.
Omni-Med is a medical-management system that contains a large office database for keeping track of patients, charges, payments, insurance companies, appointments and will also generate physician produc-

tivity reports and bills. The program handles as many doctors, patients, insurance companies, charges and payments as the user's disk will allow. It keeps all the practitioners separate on a single system, making cost sharing a possibility. Paid out accounts can be removed, making room for new ones. It will allow a user to choose overdue patient and insurance accounts for timely billing. Practice management categories are subdivided into functional groups. Users can produce patient correspondence and can track patients by appointment dates, two different medications or treatments. The program will also print insurance and patient mailing labels and will generate informative practice reports. An electronic claims option is available.
$3,495 retail; single user
$4,495 and up; multiuser (up to 5 users)
$10 retail; limited working demo
$1,000 retail; Electronic Claims Option
Synapse Software; 110 Medical Circle Dr.; Rockingham, NC 28379; 919-895-6302

Optometric Plus 5.0
Optometric office management program
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; ImageWriter.

Optometric Plus is a complete optometric office management system. Guarantor file/records maintain information on family members, transactions, last exam dates, recall dates and reasons. Patient file/records include automatic display of guarantor information, including balance and credit status. Patient charts are accessible from patient records. The program tracks insurance company information and submitted claims. Fee schedules provide for flexibility, and each CPT code may be entered under multiple fee schedules. Accounts receivable provides for invoicing, statements, account aging and audit trails. More than 80 different reports are included. Other features of the program include: nine levels of password protection, a full office management system, preprinted three-part invoice and two-part statement forms and operator entry codes that provide further audit trails.

ORCHIDS From CapMed
Clinical patient records program
Macintosh II family; 8 MB of RAM; hard disk drive; 4th Dimension; printer.

CapMed (Computer Assisted Practice of Medicine) Systems presents ORCHIDS (Office Records, Charts, Information Data System). ORCHIDS is a clinical program for organizing and accessing the clinical data contained in patient charts in a medical or surgical specialist's office. ORCHIDS combines traditional formats for the entry of history and physical examinations and of follow-up visits with innovative features for assembling patient information. Major features include: picture files for patient photos, X-rays, surgical/endoscopic photos, surgical videos and medical sketches; customized scrolling checklists for histories and physicals; customized automated letters generated from the checklists; a contact log for identifying and reviewing interactions with patients; a telephone manager for documenting and assuring informed decisions over the telephone; a chart overview format for "thumbing through" patient information; and a report generator for extracting and relating data and analyzing practice needs. There are also logs for recording and reviewing diagnostic tests, lab data, treatments and hospital-generated records. A CapMed on Call module allows physicians to give other "on-call" physicians necessary, but limited patient information. Look-up screens allow input of practice specific CPT and all ICD-9-CM codes that are then used for coding purposes and for producing the 1500 form. The program maintains a complete audit trail, making it invaluable when legal depositions are required. ORCHIDS is based on and requires 4th Dimension software. The program is password protected.
$1,995 retail; single user
$4,500 retail; three users (free telephone support for 90 days)

PIBS For Physicians
Physician practice management
Macintosh Plus or larger; hard disk drive; Claris FileMaker Pro 2.0; System 6.0.4 or later.

PIBS (Patient Information and Billing System) automates the information and billing processes for physicians. The system uses four database modules — Patient Information, Patient Billing, DSM Codes and CPT Codes — to manage the practice. DSM-IIIR diagnostic codes are fully supported. Users may address billing statements to the patient or to other parties. Several automated processes are built into the system, including monthly billing, daily insurance billing, daily activities, account balances, insurance balances and patient summaries. Insurance billing overlay to the HCFA 1500 form is fully supported. Multiple CPT billing rates are supported for HMO, PPO, Indemnity, Medicare and Worker's Compensation patients. Multiusers are supported under FileMaker Pro on LocalTalk or Ethernet.

■ **PowerCare**
Clinical patient records system
Macintosh with 68030 processor; 8 MB of RAM (12 MB recommended).

PowerCare is a comprehensive clinical patient records system that utilizes the power of a truly relational and document-centric database. PowerCare provides users with a fully integrated health care management system designed to facilitate quality patient treatment programs and maximize insurance reimbursements while reducing spiraling administrative costs. PowerCare allows users to electronically chart all of the relevant patient information, including Progress Notes, Problem and Diagnoses Codes, Medications, Lab Results. Allergies, Prescriptions and many more relevant data. In addition, the system provides users with an electronic means for generating letters to patients, sending letters to referring physicians and managing all intra-office communications. PowerCare also seamlessly works with other applications already in use, so users can combine the power of their existing applications with the desired functions of PowerCare. PowerCare can be set up as either a single-user or Client-Server solution, depending on specific needs.

Psych•Log
Office management for mental health-care professionals
Macintosh Plus or larger; System 5.0 or later; PostScript printer.

Psych•Log is an office-management system for mental health-care professionals. The program prints out monthly bills and standard insurance claim forms; maintains patient files; keeps a user's schedule in an electronic "Day-at-a-Glance"; allows a user to establish and keep track of individualized fee structures; calculates balance due less payments; supports optional interest charges on unpaid balances; keeps a user's books and produces income and expense reports; and does letter writing and mail merge. The program is available in three different versions, depending on the features needed and the size of a user's practice. Entry-Level Psych•Log is a billing system only. Single Provider Psych•Log is a full practice management system that provides scheduling, monthly statements, review of current month's client transactions, insurance form production and balance forward Accounts Receivable for a single provider. Multiprovider Psych•Log is identical to the Single Provider version, except configured for up to 30 service providers. It also includes appropriate multiprovider reports to assess individual provider productivity and payment record. The program is System 7 compatible.

Quick Ceph And Quick Ceph Image
Cephalometric analysis and treatment planning for dental/orthodontic profession
Any Macintosh (Quick Ceph); Macintosh IIci, IIfx, Centris 650 or Quadra (Quick Ceph Image).
Quick Ceph is a cephalometric (science of measuring the human head) tracing and treatment simulation program that is useful for orthodontists and maxillo-facial surgeons to develop a treatment plan, as well as for communicating with patients and colleagues and making presentations. Analysis styles available include Ricketts, Steiner/Tweed, McNamara, Downs, Jarabak, Iowa, Roth, Frontal, Burstone, Sassouni and Submentoventex. Quick Ceph uses a transparent digitizer. No intermediate pencil tracing is necessary. Different superimpositions allow for the comparison of initial tracing and VTO (visual treatment objectives) or initial tracing and final tracing.
Quick Ceph Image also allows a doctor to change a patient's video picture on the computer screen to make treatment effects visible. No digitizer is necessary.

Simplicity Dental Software II 1.0
Complete dental office management software; multiuser capable
Macintosh with 030 processor or larger; 5 MB of RAM; hard disk drive; laser or ink jet printer.
Simplicity Dental Software II is a complete multi-doctor and multiterminal-capable dental office management package designed to automate and streamline dental front desk work. It is based on the original Simplicity Dental Software but completely redeveloped to support color, large screens, laser printing and new features. The program consists of relational files allowing automatic call-up of patient and insurance information, co-payments and fees on the same screen during transactions, automatic preparation of insurance forms and recall cards. The software prepares and prints referral letters, insurance forms, mailing labels, envelopes and chart labels. It produces numerous reports showing balances, office production, outstanding insurance claims and unpaid bills; prints/displays total production and collection for each doctor or hygienist; tracks procedures performed during any date period; automatically tells a user when all insurance is paid and whether the patient should be billed, prepares insurance forms for secondary carriers; supports multiple fee schedules and cash discounts; and entry of an ADA code automatically calls up fees and calculates anticipated approximate patient insurance payments and allows for instant discounts. Pop-up windows allow instant access to codes and fees. Other features include: prints receipts and statements and bills; prints birthday cards; tracks inactive and lost patients; limited word processing for letters and postcards built in; and tracks specialist referrals by doctor and shows patients and production generated by referring doctors. It also allows dental supply inventory tracking. Laser printing eliminates the need for preprinted forms.
$1,950 retail; single terminal version, includes complete manual and 60 days of telephone support
$350 retail; each additional terminal
$70 retail; limited working demo and abbreviated manual
Ongoing support is available
Simplicity Dental Software Systems, Inc.; 9 S. Ridge Ave.; Ambler, PA 19002; 215-646-3382 (phone/fax)

Solo Deluxe And Solo Basic
Mental health care practice management
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); hard disk drive; 640 by 480 pixel screen or large-screen emulator; ATM.
Solo Deluxe With Meds Support is a comprehensive practice manager for mental health care professionals, featuring integrated drug management. It is an ideal assistant for accounting, scheduling, session note taking and patient chart making. It includes a prescription blank and dynamic letter creation with personalized letterhead. Custom reports keep users in touch with their practice statistics. And, Solo Deluxe With Meds Support automatically creates a wide range of legal forms and practice administration documents, including HCFA 1500 forms.
Solo Deluxe contains all of the features of Solo Deluxe With Meds Support, except the drug management features.
Solo Basic is a version of Solo that is designed to function with the original Macintosh 9-inch screen. It does not support psychometric testing, has fewer appointment slots in its calendar and has limited expansion capability.

Spine Manager
Data collection and reporting program for orthopedic surgeons and neurologists
Macintosh Plus or larger; 2 MB of RAM; 4th Dimension Runtime (included).
Spine Manager allows for spine patient data collection from initial ID through general history, spine history, pre-exam/follow-up, physical exam, diagnostic studies, medications, treatments, surgical procedures, diagnosis, treatment plan and work/disability. It then compiles text and diagram reports for any one or all of the topics covered. Spine history, follow-up exam information and prior diagnosis are compiled in text format and displayed for review in the physical exam section. This allows for the immediate review and/or printing of gathered information without waiting for transcription. Custom modification is available.
Call for pricing; multiuser available upon request per customer specifications
Journey/North Sound Development; PO Box 1151; Mukilteo, WA 98275; 206-259-2659

■ **StakAuthor**
HyperCard-based database package
Macintosh Plus or larger; 2 MB of RAM; 8 to 10 MB of free hard disk space; HyperCard 1.2 or 2.0.
StakAuthor is a HyperCard-based database package designed to link with the Slice of Life videodisc. StakAuthor comes with searching and authoring tools to provide non-programmers with the ability to create interactive video lessons without the need to do any involved programming. StakAuthor comes as a three HyperCard stack: the Slice of Life Database; Slide of Life Help File; and Slice of Life Template. When linked to the videodisc, StakAuthor gives users the ability to tailor-make instructional programs that access information on the videodisc as desired. Each lesson is therefore unique, allowing "authors" the means to address their specific educational needs or instructional emphases.

The Therapy File (Orthopedic Edition)
Provides individuals with personalized home therapy programs
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); System 6.0 or later.

The Therapy File (Orthopedic Edition) is a database of more than 300 therapy exercises, all containing high-quality PostScript illustrations. These activities can be combined in any number or order to create individualized home therapy program hand-outs for clients. Developed by rehabilitation professionals, the activities are categorized by body region and type of exercise so that users can easily structure their client's program. The exercises are broken down into the categories of range of motion, strengthening, self mobilization and stretching. They vary in their intensity and degree of difficulty to include a wide range of patients at various stages of recovery or fitness. Users can specify the parameters of each exercise, as well as add unique exercise regimens that are specific to their practice.

ERINOAK; Serving Young People With Physical Disabilities; 2277 South Millway; Mississauga, Ontario, Canada L5L 2M5; 905-820-7111 or 905-820-1333 (fax)

The Therapy File (Pediatric Edition)
Provides families and caregivers with personalized home and school therapy programs
Macintosh Plus or larger; 2 MB of RAM (4 MB with System 7); System 6.0 or later.

The Therapy File (Pediatric Edition) is a database of more than 500 tried and tested activities for pediatric rehabilitation, about half of which contain high-quality illustrations taken from actual therapy sessions. These activities can be combined in any number or order to create personalized hand-outs for therapy follow-up by parents or school personnel. The Therapy File is organized into five major areas: gross motor activities, sensory-motor and perceptual-motor activities, upper extremity and fine motor activities, stretchings and infant/pre-school activities. The Therapy File can be easily customized to incorporate the special programs of an institution or practice. Text can be added by a typist and illustrations can be pasted from any Macintosh graphics program. The Therapy File is appropriate for use by both occupational and physical therapists.

ToothPics
Dental patient management system
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later; ImageWriter II.

ToothPics Professional is a complete dental patient management system with on-screen charting for easy entry of existing conditions, treatment plans and treatment. ToothPics is network ready to take advantage of chairside charting and to simplify front desk operations. The comprehensive walkout statement includes a graphic odontogram, printed in color, to reinforce patient in-office education, with the result of increased treatment plan retention and acceptance. Standard and custom reports are included. All reports and forms are printed on plain paper stock to eliminate the cost and hassle of extra printers and pre-printed forms. ToothPics allows for multiple providers, multiple fee schedules and multiple workstations. It prints and tracks insurance claim forms, insurance pre-treatment authorizations, patient and family ledger cards and standard business information and statistics.

ToothPics Basic is a subset of the professional product and is available for single provider, single fee schedule and single workstation applications.

Top 200 Drugs
Health care database
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; HyperCard 2.x.

Top 200 Drugs is a database containing information on the most prescribed drugs in the United States. It is designed as a study aid to allow users to quiz themselves on various categories of the top 200 drugs. Categories include trade name, generic name(s), DEA schedule, company name, available dosage forms, therapeutic class, FDA-approved indications and dosage ranges, pharmacology notes, pertinent drug interactions, contraindications and precautions, adverse effects and patient consultation information. Each category can be visible or hidden easily to allow self quizzing. Users may search for key words in any category or the database as a whole. Sorting can be done on trade name, generic name or top 200 ranking. Information is compiled by registered pharmacists from current medical literature.
$29.95 retail

Veterinary Computer Library
Gives users access to the most recent veterinary information, including small and large animal medicine and surgery
Macintosh Classic or larger; 4 MB of RAM; HyperCard 2.0 or later; System 6.0 or later.

Users can now have instant access to the most recent veterinary information on their computers. Available are: 1992 Scientific Proceedings of the American Animal Hospital Association 59th Annual Meeting, Proceedings of the American College of Veterinary Internal Medicine Tenth Annual Forum and Proceedings of the North American Veterinary Conference. Each contain a wide range of topics covering small and large animal medicine and surgery. Articles may be located by title, by topic, by author or by any parameter. The Veterinary Drug Handbook contains more than 300 drug listings. Veterinary drugs (or human drugs commonly used in veterinary medicine) are listed by generic or trade name. All listings may be located by drug class, by drug name or by word search of the complete or of a subsection of the Veterinary Drug Handbook. The Veterinary Computer Library provides a unique way to view information. It provides a complete cross index to every word in the entire reference.

■ ParaRisk Risk Management Information System
Multiline claims management system
Macintosh Centris 610 or larger; 12 MB of RAM; System 7.0 or later.

ParaRisk is a multiline claims management system that encompasses a wide range of risk management functions: claims administration, policy management, exposure and property value tracking, certificate tracking and issuance, loss analysis, payroll history tracking, treatment history and user maintained medical charge tables. ParaRisk features a true graphical user interface and uses a forms-based system that graphically replicates paper forms on the computer screen. All system functions are represented on the screen by an icon or an action button and its use is intuitive. Data may be imported from other sources, such as payroll information. Data may also be exported in text or ASCII format. All notes, claim forms, screens and reports may be printed to the screen for preview or to a printer. Standard and ad hoc reports are supported by ParaRisk, including OSHA 200 logs, electronic first report of injury forms and 1099 reports. ParaRisk is available in stand alone or multiuser client/server configurations.

Vertical Markets/Law Enforcement & Fire Service

CompuScene
Generates professional sketches for crime or traffic accident scenes
Macintosh Plus or larger.

CompuScene can generate professional crime scene or traffic accident sketches. It includes a CAD program that was specifically selected for the requirements of crime scene and traffic accident reconstruction drawings. It also includes a special library of drawn objects for law enforcement applications. The crime scene libraries are templates that provide all of the elements important in an investigation of a serious crime, such as furniture, victim, weapon, etc. The drawings are easily changed and can be printed at any size (up to 4 by 4 feet). The Traffic Accident Reconstruction allows the professional traffic accident reconstructionist to create high-quality drawings on the computer and print them out at any size (up to 4 by 4 feet). This also includes a computerized calculation program with all of the standard traffic accident formulas for quick, easy calculations.

Law Man
Integrated law enforcement information management system
Macintosh Plus or larger; 4th Dimension Runtime (included).

Written by police officers, Law Man has been developed as a support system for a multicounty narcotics task force and lends itself to a variety of law enforcement environments, including city, county, state and federal agencies. The Law Man system integrates the management of Seized Assets, Informants, Intelligence and Internal Affairs and Major Case Tracking, and provides for a variety of cross referencing and reporting functions. Evidence, Phone Toll, Knock & Talk and Case Management modules are under development for future updates. Individual modules or custom grouping are available upon request. Custom modification is available.

Mac-A-Mug Pro
Composite human faces
Macintosh 512K or larger; external disk drive or hard disk drive; ImageWriter or LaserWriter.

Mac-a-Mug Pro is a complete system for generating composite human faces. It provides a means for non-artist, law enforcement personnel to assemble realistic composites based on eyewitness descriptions. Features include the ability to scroll through various facial features. A user may also save and reassemble faces to and from the disk. A variety of pencils, brushes and erasers are provided to allow immediate editing of the faces before printing. A user may also cut and paste faces into MacPaint for "lineup" portraits. The print function allows a user to optionally date stamp each poster; print each session's start, finish and elapsed time; enter, edit and print a suspect's description; and print the feature ID numbers for transmission to other departments.

Mac-CFIRS
California fire incident reporting system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; HyperCard.

Mac-CFIRS is a fully automated version of the California Fire Incident Reporting System. The program consists of a data entry module with full validity checking for code type and formatting, in accordance with the California State Marshall's requirements. No code manual is required to enter data; all codes are accessed by pop-up menus. Error messages and automatic correction assure that entries will always be valid. Additionally, a FileMaker Pro module is provided to manipulate and create user-definable reports. Standard hard copy printouts match the State Fire Marshal's forms and data may be transferred by 3.5-inch disk directly to the California SFM Office. Future modem support will be provided when that feature is implemented by the California SFM Office.

■ **Rural Fire Management**
Fire department management
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

Rural Fire Management (RFM) is primarily designed for small to medium size fire departments. RFM is designed with the unskilled computer user in mind. All entry is done by way of lists, partial entry or type entire entry. RFM currently tracks all personnel information and certificate expiration dates. Training classes and related information is kept on each firefighter, along with reports for pension and training history for each firefighter. Incident reporting system for Fire, EMS and Wildland are kept with the simplest of entry. Individual incident reports can be printed, reports showing the number of runs per category, runs by day of the week, runs by hour of the day and calls by month. Hydrant inspection with automatic calculation and building inspection information is maintained.

■ **AgreeMentor**
Business, sales and legal agreements
Macintosh 512K or larger; hard disk drive recommended; MacWrite 3.0 or Microsoft Word 3.01.

AgreeMentor provides 24 pre-written, fill-in-the-blank business agreements on disk. Although drafted by attorneys, the agreements are written in everyday language to be understood by non-lawyers. These agreements define expections and cover contingencies between the user and customers, suppliers, reps, employees and others. The templates can be edited using a word processor to suit specific purposes. Some of the agreements include dealer resale, independent sales representative, manufacturer's representative, non-disclosure, business assets transfer, equipment lease or purchase, promissory note, ad/design agency policies, business consultant, referral letter, finder's fee, partnership, power of attorney and employment.

Automation Law
Law office practice management system
Macintosh Plus or larger; SQL server and TCP/IP network.

Automation Law is a law office practice management system designed and built using relational database technology and SQL-based data servers. It is a fully integrated system that goes far beyond time and billing. Automation Law provides for full real-time capture of disbursements for copy charges, telephone calls and postage meters. It is fully integrated in the Trust and banking areas and provides up-to-date real-time management reports. Client conflict, calendars, work in progress and trust accounts are all available to each time keeper in real time, online. Security was also designed into the basic fabric of the system. Because of its client server technology, Automation Law can be expanded to serve a user's needs — from small to very large firms.

Bankruptcy 4ms4Mac
Prepares Chapters 7, 11, 12 and 13
Macintosh Plus or larger; 2 MB of RAM; System 6.0.3 or later.

Bankruptcy 4ms4Mac prepares Chapters 7, 11, 12 and 13 in an easy page-by-page environment. It is not a template requiring purchase of a database program. Repetitive information, such as the debtor's and attorney's data, is exported to all "same" fields with clairvoyant intelligence. Numeric calculations on all schedule sheets are automatically tabulated and totaled on the Summary of Schedules page. Printing speed averages 45 seconds per page or less on a 6 ppm laser printer. Any additional local rule pages required are available on request.
$375 retail
4ms4Mac Co.; 1025 S. Main St.; Corona, CA 91719; 909-736-1169 or 909-737-4691 (fax)

Brevity
Utility for printing condensed transcripts
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.2 or later.

Brevity software prints transcripts in multicolumn format. Because four to seven times as much information appears on each printed page, it is easier for a lawyer to review, organize and carry transcripts. A 100-page deposition can be printed in 10 pages or less, in three-column, two-sided format. Additional advantages include reduced storage, duplication and postage costs associated with handling transcripts. Brevity allows users to print transcripts in any font type or size and up to four columns. It offers two-sided printing with any standard printer. Brevity uses standard ASCII transcript files from a court reporter — no proprietary format is necessary.

Cadence V2
Attorney's office management manual
Macintosh Plus or larger; word processing application reading Word files.

Cadence is an online, or offline, manual for managing a professional's office. It is designed for the solo practitioner and small to medium-size firm using microcomputers. Cadence integrates efficient information and computer management techniques, today's marketing practices and traditional management concerns. It makes current procedures available to everyone facilitating smooth operation of the office. Cadence consists of several manuals. There is a standard manual for reference, a manual used for training a new staff, and a brief manual used for training temporary employees.

CaseRunner
Enables litigators to annotate existing transcripts with notes and questions
Macintosh Plus or larger; 2 MB of RAM.

CaseRunner enables litigators to easily annotate existing transcripts with notes and with questions to be asked at future depositions or at trial. The program is unique in that it displays this information in a multi-column format, allowing users to see both the original transcript and the annotations at all times. CaseRunner loads and automatically formats existing documents. Transcripts (in ASCII or popular WP formats) are split into cells, retaining the original line, page and volume numbers. Full-text Boolean searches are supported across multiple documents, along with user-defined topic searches. Users may also view only those portions of a transcript that have been annotated. CaseRunner was specially designed for lawyers and can function in a networked multiuser environment. It maintains lists of users, clients and cases and can keep track of time spent using the program. Billing reports of any size law office may be generated.
$500 per user retail; discounts for multiple users is available

CIBS For Attorneys
Legal practice management
Macintosh Plus or larger; hard disk drive; Claris FileMaker Pro 2.0; System 6.0.4 or later.

CIBS (Client Information and Billing System) automates the information and billing processes for attorneys. The system uses three database modules — Client Information, Client Billing and Fees — to manage the practice. Users may address billing statements to the client or to other parties. Several automated processes are built into the system, including monthly billing, account balances and management reports. CIBS for Attorneys provides for detailed time accounting and management reporting. Data entry can be handled by a central office staff or by individual attorneys. Multiusers are supported under FileMaker Pro on LocalTalk or Ethernet.

Cudgel 1.5
Litigation companion with docketing
Macintosh Plus or larger; 68030 or higher chip preferred; hard disk drive; Helix Express.

Cudgel comprehensively coordinates evidence, graphics, witnesses, facts, laws, papers, notes, costs and more — key litigation information from complaint through discovery to trial and appeal. Users can easily set up key word searches for text, dates, times and numbers; searches can be exact hits or simple logical relationships. Not simply "litigation support" nor "case management," the fully relational Cudgel optimizes menus and privileges for Trial, Docket, Clerical Support, Archiving and Full Access. Cudgel's integrated Docket shows deadlines by period, person and case. It supports multiple cases; multiuser and site licenses are available. Both full computerized and paper reports are supported. Patent pending.

De Novo Legal Case Manager
Litigation management
Macintosh SE/30 or larger; 4 MB of RAM; hard disk drive.

De Novo Legal Case Manager is a litigation and case management tool enabling trial lawyers to manage personal injury, domestic relations and other litigation.

Ease of use is built in to minimize training time and maximize effectiveness. Users can produce valuable work the very first day. Critical case information is always available at the click of a button and mail-merged forms and requests-for-information are easy to generate. It easily merges case data into client contact letters and provider requests for information. Current forms may be imported and report formats are provided, which allow quick overviews of key aspects of a user's caseload. Intuitive entry screens store client data: General Info, Medical Info, Medical Expenses, Wage Info, Witness Info, Expert Witnesses, Liability Insurance, Lawsuit Info, Settlement, Discovery, Depositions, Domestic Relations and more. Using System 7 Apple Events, the single-user De Novo Legal Case Manager automatically posts reminders to Nisus Software's Easy Alarms 2.1 calendar and reminder system. Multiuser FoxPro version links to Word, WordPerfect and various calendar/reminder systems and PIMs via AppleScript and AppleEvents to make integration with office standards and practices a snap.

DocumentSmarts
Automation for intelligent report generation
Macintosh with 1 MB of RAM; hard disk drive.

DocumentSmarts is a power tool for automating the assembly and generation of large documents, that gives corporations with enterprise-wide computing requirements or professionals such as lawyers a competitive edge. Large corporate documents, such as insurance contracts, patent applications, investment prospectus filings or environmental impact statements, have an inherent logical structure that can be described by rules or by reference to previous examples or cases. Using DocumentSmarts, the logical structure for the documents is stored as if-then type rules and the document components, e.g., paragraphs, stored in a word processor common interchange format, RTF (Rich Text Format). An interview procedure asks the users natural-language questions to determine which component should next be added to the growing document. For example, "Is the fund taxable?" is a critical question for the prospectus of a mutual fund. The person assembling the document answers Yes and No or selects an answer from a scrolling list of choices, then passes on to the next question. Auxiliary explanatory material can be displayed simultaneously with the next question to facilitate the appropriate selection. By replacing high labor costs by the low-cost DocumentSmarts system, tremendous time savings can be achieved. It works with all major word processing software.

Law Office Manager
Legal client management
Macintosh Plus or larger; hard disk drive; System 6.0.8 or later.

Law Office Manager (LOM) is a full-featured, multiuser docket control system and much more. Data is maintained within five main data files: Clients, Matters, Jobs, Archives and Documents. Viewing or printing information is very simple and yet very powerful when using the report editor for custom reports or the built-in reporting for each file. Along with the reporting features, LOM also has built-in word processing, which aids in the creation of forms. A powerful label editor is included for creating all types of labels. Other features include multilevel conflict checking, automatic client numbering, automatic upper- and lowercasing of typed text, automatic ticklers, hot linking of documents and automatic entry of cities and states based on the Zip code entry. LOM was designed for attorneys by attorneys of different specialties, making the program suitable for any size law firm.

LoanLease Library is a loan and lease payment tracking program. It is designed to handle payments that may be early or late and for varying amounts. Several late payment penalty options are available. For loans, LoanLease Library keeps track of the number of days between payments and the number of days at each interest rate, for loans with changing rates. Several interest accrual methods may be selected. A payment schedule may be generated showing interest and principal distribution, balance due, payment dates and any penalties that may have been charged. For leases, LoanLease Library tracks rental receipts, rent due, other miscellaneous charges and the balance due. A detailed activity summary statement may be generated for leases. All reports may be customized with user-supplied headers and may be copied to the Clipboard so they may be pasted into other Macintosh programs.

MacBankruptcy
Bankruptcy forms
Macintosh Plus or larger (030 CPU and large or second screen recommended); 2 MB of RAM; hard disk drive; System 6.0.4 or later; LaserWriter or other high-resolution printer.

MacBankruptcy was written by a team of bankruptcy attorneys for the official bankruptcy forms effective August 1, 1991. It prepares Chapters 7, 11, 12 and 13 with minimum keystrokes and mouse clicks. It features a very low ratio of data entry to ultimate data usage. Single clicks allow a user to: build a reusable database of frequently used creditors; enter database creditors from a scrollable list; receive a liquidation analysis; have maximum allowable exemptions selected, calculated and taken; receive a complete fileable Chapter 12 or 13 Plan calculated and drafted by the program; and view any schedule on screen exactly as it will look when printed. MacBankruptcy automatically sorts creditors by debt classification and prints onto appropriate schedules in alphabetical order; calculates and prints Summary of Schedules, complete with page totals and amounts; and prints an address matrix in a format selected by a user (including matrices on disk in Mac or DOS format). No page attachments are needed, and there is an automatic repagination feature where appropriate. Online help includes selected statutes and rules.
$950 retail; single user
$1,600 retail; multiuser
Inexpensive short-term licensing and rent-to-own options available

MacBankruptcy Lite
Bankruptcy forms
Macintosh Plus or larger (020, 030, 040 CPU strongly recommended); 2 MB of RAM; hard disk drive; LaserWriter or other high-resolution printer; System 7.0 or later.

MacBankruptcy Lite is a stand-alone program for general practitioners who cannot justify the expense of more elaborate bankruptcy programs. It generates all of the latest official forms for Chapters 7-13 (Chapter 11 List of 20 Largest Creditors and Exhibit A is not supported in this version.) Forms are those designed by the U.S. Judicial Conference and are accepted in all jurisdictions. Printed on plain paper, each form has an associated WYSIWYG preview window. Summary of Schedules, Address Matrix and Form 8 are prepared automatically, as are all subtotals, continuation pages, alphabetization and classification of debts and assets. Defaults allow users to answer only questions applicable to their client. Pop-up menus, checkboxes and buttons and lists prompt users with possible responses, including exemption. System 7 Balloon Help for each item will coach bankruptcy novices through their first case.

MacEsquireExpress 4.0
Law office management
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

MacEsquireExpress is an integrated law office practice management application that supports the natural workflow of the modern legal practice. Far more than a sophisticated monitor of activity and expense by associate and client, MacEsquire presents a live and interactive picture of what's going on. As attorneys have begun to use computers, they have begun to create an electronic mountain of data contained in disparate documents that are all related to their practice. MacEsquire provides a natural environment for these documents, with all the activity of a matter to which they relate. These documents, and the various versions of these documents, are now easily and readily accessible, and appear within the context of a user's work. Best of all, these documents may be anything from a Lexis online research session saved to disk to a brief to a scan or a QuickTime clip of a piece of physical evidence in a trial. And it doesn't matter if they're on a local or network drive, floppy disk or CD-ROM. MacEsquire integrates its database and document information with: an online docket, court and appointment scheduling system; time and disbursement billing and accounting; OfficeLink, Synergy's online electronic message bulletin board; multiple mailing list and mail merge; and multiple fund and fund-raising management. All information is queryable both by boolean, wild card and keyword searches on several simultaneous levels.
$795 retail; single user
$179 retail; each additional user (minimum two)

MacLaw
Attorney office management
Macintosh with 68030 processor or larger; 4 MB of RAM; hard disk drive.

MacLaw is an office management program for attorneys. The program uses separate windows for different kinds of data. The Client File window allows users to sort matters by case, plaintiff or defendant with user-definable search and sort criteria. The Matter file supports flexible billing and calculates retainer and trust accounting. It also tracks witnesses, experts, opposing counsel and court calendars, and schedules periodically occurring events. The Attorney File window shows receivables and attorney's billings. The Billing window allows users to view receivables by client or matter. The Phone Calls window tracks all incoming and outgoing calls and generates appropriate billing. The Calendar window displays all appointments. The Multiparty and Class Action window allows tracking of multiparty and class-action litigation. Separate modules will be offered for personal injury, bankruptcy, taxation, real estate, patent, trademark, corporate and probate cases.

Managing Partner
Practice management system
Macintosh LC or larger; 12-inch or larger monitor recommended; System 6.0.5 or later (System 7 required for some features); Helix Express; PostScript-compatible printer or ATM.

Managing Partner is a comprehensive and secure client-server based multiuser practice management system, developed, published and directly supported by practicing attorneys. It integrates the management of case files, clients and all other associated persons; reminders, schedules and work assignments, including the retrieval of externally stored computer documents; business, trust and tax accounting, including laser checks and self-configuring income statements; time and billing; computer assisted document drafting and more. Yet more importantly, it performs these many functions elegantly in an inviting, intuitive and integrated way while fully exploiting the Macintosh interface. Dynamically linked pop-up menus, on-screen command buttons, intelligently computed defaults and very extensive data validation during and after entry ensure accurate, efficient and consistent entries without the need to remember obscure codes or commands and with a minimum of typing. Built-in intelligence constantly watches as users work, alerting them to errors and offering coherent and appropriate explanations if requested.

Nolo's Living Trust
Creates a probate-avoiding living trust
Macintosh Plus or larger; 1 MB of RAM; 800K disk drive; System 6.0.1 or later.

Nolo's Living Trust is an easy-to-use software package that lets users create their own living trust documents. Users can avoid the time and cost of probate, transfer property to heirs — quickly and easily, keep financial affairs confidential and avoid excessive lawyer's fees. Every key legal term and concept is explained in an online glossary and more than 100 legal help screens. Both married and single users can use the program. Users can change or revoke a trust at any time. Nolo's Living Trust is valid in all states, except Louisiana. It is System 7 compatible.

Office Wiz Pro For Law
Office management for law offices
Macintosh LC II or larger; 5 MB of RAM; laser printer.

Office Wiz Pro for Law is an integrated case management and time/billing program. It is ideal for the solo practitioner or small-to-medium-size law firm. Office Wiz combines key tasks into a single applications, including case and contact management, docketing, time/billing and accounting. Office Wiz comes with a calendar function with daily reminders. The program also provides extensive flexibility in setting billing rates and invoice formats, and modifying charges. The accounting function supports trust accounts and check writing. Powered by a relational database, Office Wiz comes with a report generator and internal word processor.

■ **PowerLaw**
Legal practice management system
Macintosh with 68030 processor; 4 MB of RAM (8 MB recommended).

PowerLaw is a comprehensive and integrated legal practice management system, utilizing the power of a truly relational and document-centric database. PowerLaw provides users with a fully integrated, and scalable, legal practice management system that enables users to run their practice more efficiently and effectively. PowerLaw combines Client and Personnel Management, Matter Tracking, Time and Billing, Document Management, Docket and Calendar, Intra-office Communication and Correspondence Writing into one integrated environment. PowerLaw seamlessly works with other applications already in use, so users can combine the power of their existing applications with the integrated functions of PowerLaw. PowerLaw can be set up as either a single-user or Client-Server solution, depending on specific needs.

Practice Made Perfect Calendar
Calendar and docket control, time management, client and matter information
Macintosh Plus or larger; hard disk drive.

Practice Made Perfect Calendar includes calendar and docket control, time management and client and matter information in an integrated single-entry system. Entries may be rule-based or individual, with any number of action templates created by a user. All action and location codes are user assigned and unlimited in number, with lookup lists provided during transaction entry. Allowed are an unlimited number of calendar entries, clients and matters. Entries may be prioritized. Calendar entries may be accessed online, or through reports by deadline or target date, sorted by date and time, timekeeper, client, matter, action, location or priority. System information is available in merge (tab delimited) format for use with other applications. Reports may be output to screen, file or paper for case management and practice development.

Ready For Trial!
Transcript management and analysis software
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 6.0.2 or later.

With Ready For Trial!, users are able to analyze and summarize transcript material, such as deposition testimony and exhibits, by issue, exhibit or date of facts across any combination of witnesses. Full text search (indexed, Boolean capabilities) and a Keyword feature allow users to find any text across multiple transcripts. Sixteen different report formats give users total control of testimony in the case. The program can export all data in a choice of five different file formats for use with many other database, outliner or word processing packages. Ready For Trial! uses standard ASCII files, available from most court reporters.

Robins Analytics, Inc.; 245 E. 6th St., Ste. 821; St. Paul, MN 55101; 612-224-1289, 800-767-3239 or 612-224-2633 (fax)

Sonar Professional
Text-retrieval system
Macintosh Plus or larger.

Sonar Professional is designed for sophisticated retrieval and analysis of massive amounts of text. Sonar Professional searches freeform text in multiple files without requiring a user to setup a database. It differs from simple multifile text retrieval utilities by using high-speed dictionary techniques that reduce search time from hours to seconds. Boolean, wildcard, proximity, phonetic and synonym searching are supported. A key feature of the program, automatic hypertext, allows a user to interrupt a search at any point to add a note or perform other searches. The program can find and link specified words or phrases to "related" text. Sonar Professional can generate reports, allows for explorations at an infinite number of levels, limited only by available memory and disk space, and searches 10,000 pages per second. It supports popular file formats.

Time$aver Law Office Management System
Integrated financial management and practice management
Macintosh Plus or larger; hard disk drive.

Time$aver is a professional database application that recognizes the necessary connection between the time, schedules, expenses and finances of legal professionals. It goes beyond being a reliable and easy-to-use time keeping and billing (practice management) system, as well as being a complete financial management system, by linking all key aspects of a legal practice's management. Along with providing virtually unlimited numbers of users, clients, matters, time and disbursement records and accounting records, it also provides users with the flexibility to enter data and obtain reports in ways that can be customized. Subject to password protection, any user can have prompt access to the entry and display or printing of current information about services performed, costs incurred, things to do, reminders, memos, client funds, receivables, general ledger and more.

WestCheck
Citation-checking package
Macintosh Plus or larger; System 6.0 or later.

WestCheck is an automated citation-checking software package that allows users to verify citations in a brief or other document or in a manually entered citations list. WestCheck automatically extracts citations from briefs, verifies them, lists them for review and modifications and then checks them with remarkable speed using Insta-Cite, Shepard's and Shepard's PreView. Results can be offline printed, downloaded or mailed to users. WestCheck provides users with many useful features, including custom limits for Shepard's and Shepard's PreView, pull-down menu options; automatic access to Westlaw; automatic entry of a user's Westlaw password; a new tutorial; file management features (browse, print, rename and delete); store-to-disk capabilities, including full document downloading in word processing formats; and various printing capabilities, including offline, dual column printing on attached PostScript printers, which produce pages similar to those in a West Reporter.

WillMaker 5.0
Self-help legal software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.4 or later.

WillMaker 5, Macintosh, is the latest upgrade to self help legal software. This version offers two important new estate-planning modules, the living will and final arrangements document, as well as numerous other program improvements. The program still features an easy-to-use interview format that takes users through each document step by step, asking questions in plain English and comprehensive legal help, both online and in the printed manual. Plus users get maximum protection for their children— users can name a guardian, a property guardian, create a children's trust or use the Uniform Transfer to Minors Act. WillMaker is valid in all states except Louisiana. It is System 7 compatible.

Vertical Markets/Library Management

Alexandria
Library automation and management
Macintosh Plus or larger; hard disk drive.
Alexandria provides library automation with advanced technology and a large install base for the Macintosh. It keeps track of circulation and inventory, provides statistical analysis of library and collection utilization and manages subscriptions and acquisitions. It also offers a powerful catalog with advanced searching capabilities, including easy-to-use phonetic "sounds-like" and Boolean logic searches. Alexandria is fully MARC compatible and integrates directly with Brodart's Precision One reference CD-ROM using COMPanion's exclusive SmartMARC technology. Alexandria Professional MU (multiuser version) is accessible from all networked computers and is currently assisting librarians in the K-12, University and business markets, both domestically and overseas. COMPanion also offers Textbook Librarian for quick and easy management of textbooks.

LibraryBrowser
Public-access catalog for libraries
Macintosh Plus or larger; System 6.04 or later.
LibraryBrowser is an online public access catalog to assist the public in their search of a library's catalog. Icons represent catalog card drawers searchable by author, title, subject, keyword or call number. LibraryBrowser locates the desired items with information regarding their availability. Complete information for an item appears in the form of a catalog card by double-clicking on the item with the mouse. Icons for a printer or disk are double-clicked to print search results or to create a file for the import of search results into a word processing document. LibraryBrowser allows the retrieval of multimedia documents including images, sounds, video and computer files. Farallon's Replica document sharing program is bundled with each copy of LibraryBrowser.
$269 retail; site and organization licenses available
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

■ **LibraryBrowser For Newton**
Public library search on Newton
Newton 100 or 110; System 1.0.4 or later.
LibraryBrowser for Newton allows users to search their library using Apple's Newton Personal Digital Assistant computer. All library programs that can export MARC records can be used with LibraryBrowser for Newton. A special software program called the Library Connection Kit converts the MARC records into a format compatible with LibraryBrowser for Newton. The data is then downloaded to the Newton through a simple file transfer protocol. LibraryBrowser for Newton is designed to allow catalog searching at any location and at any time. Users can search the stacks while in the stacks. Professionals can do research and build bibliographies at their desks, home or in meetings. Libraries can carry the entire library with them to the bookstore or to a tradeshow to verify holdings before purchases.
$49 retail
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

LibraryDisc
CD-ROM databases with current events and technical information for use in libraries
Macintosh Plus or larger; System 6.0.7 or later; CD-ROM drive.
LibraryDisc is a collection of CD-ROM databases that deliver the information resources of the library and of respected publishers (through abstracts of newspaper, magazine and journal articles, library cataloging entries and other publications) to a user's desktop at home or at the office. Searching capabilities include left and right truncation and Boolean operators in the author, title, subject and keyword indexes. Titles released in 1994 include: MARC for Schools and National Newspaper Abstracts. CASPR has ambitious plans to offer additional business, legal and current events CD-ROM databases in 1995.
$395 to $1,295 retail; depending on database
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

■ **LibraryServer**
Provides dial-in access to search multiple libraries
Macintosh Plus or larger; System 6.0.4 or later.
LibraryServer is a network application that provides users with the capability of searching multiple libraries without having to access each one separately. LibraryServer also provides dial-in access using TTY terminal protocols. This allows all forms of terminals and computers to search a library and allows the user's library to participate in the Internet as a GOPHER server. Library Server is a Z39.50 server that allows the user's library to be searched by other users over the information highway. LibraryBrowser will also have Z39.50 client support to allow it to search other libraries not built or managed by LibraryWorks. This provides access to public libraries from user stations using LibraryBrowser.
$1,000 retail
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

LibraryWorks 2.0
Integrated library system
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 6.04 or later.
LibraryWorks is an integrated library system designed with the cooperation of the Apple Corporate Library. LibraryWorks offers four modules as part of its basic package: the catalog, acquisition, circulation and serials modules. An online public access catalog, LibraryBrowser, is available as a separate item. LibraryWorks is designed in C and features inverted phrase and keyword indexes for fast data retrieval, relational databases for integration of records across all modules and hierarchical record structure. All of the power and intuitive features of the Macintosh are available through icons, graphics, pull-down menus and visible commands. LibraryWorks provides for the storage and retrieval of multi-media documents including images, sounds, video and other computer files. Farallon's Replica Creator and Viewer is bundled with each product. Replica allows sharing of documents without concern for applications that created them.

Mac Card
Formats and prints catalog cards and book pocket and spine labels
Macintosh Plus or larger.
Mac Card is designed to reduce the time spent on this meticulous, yet tedious chore. Users input the information, and the computer becomes a specialized word processor that automatically formats and prints catalog cards, as well as book pocket and spine labels. It also works well with audiovisual materials and software. Users can retrieve the information and print at their convenience. The program will print as many copies as needed.
$269 retail
K-12 MicroMedia Publishing, Inc.; 6 Arrow Rd.; Ramsey, NJ 07446; 201-825-8888, 800-292-1997 or 201-825-0582 (fax)

Mac School Library Pro V.1.0
Catalog and circulation system
Macintosh Classic or larger; System 6.0 or later.
Mac School Library Pro is a calendar-based, integrated catalog and circulation system. It stores extensive bibliographic information and offers flexible Boolean search capabilities, with easy access to circulation status. Circulation procedures flag delinquent patrons, trap books on hold and calculate overdue fines. Book labels, catalog cards and overdue notices can be printed. The system maintains up to 4,000 borrowers and 65,000 books. Data can be entered manually into the system or imported directly from MARC or MicroLIF records. The password protection system allows passwords to be created for groups or individuals. Access levels can be specified for each function within Mac School LibraryPro for each group or individual with a password. Light pens and bar codes can be used for book or patron IDs.

Mac The Librarian Card Printing
Produces catalog cards
Macintosh Plus or larger; Mac the Librarian Public Access Catalog.
Card Printing is the third module in the Mac the Librarian suite of programs. It enables librarians to produce sets of AACR-2 formatted catalog cards. Book pocket, card and spine label sets may also be printed for each item in the collection. The module fully integrates with both the Public Access Catalog and the Circulation modules of Mac the Librarian.
$300 retail
Richmond Software Corp.; 3960 Fallbrook Dr.; Duluth, GA 30136; 404-623-4898 or 800-222-6063

Mac The Librarian Circulation
Library management system
Macintosh Plus or larger; Mac The Librarian Public Access Catalog.
Circulation is the second module in the Mac the Librarian suite of programs. It incorporates the use of bar-code technology to create transactions between patrons and items. This module permits a librarian to totally automate the circulation process by handling loans, reserves, overdues, holds, notices and inventory. Quick entry of non-cataloged items for circulation is available, and barwand-only interaction with the database is available to speed the transaction process. Users may have access to charge, renew, cancel and reserve functions simultaneously. Circulation statistics are generated on an as-needed or specified-period basis. There is no limit to the number of annual circulation transactions, overdues or reserves the system will handle.
$500 retail; multiuser version is available
Richmond Software Corp.; 3960 Fallbrook Dr.; Duluth, GA 30136; 404-623-4898 or 800-222-6063

Mac The Librarian Public Access Catalog
Library management system
Macintosh Plus or larger.
The first module of Mac the Librarian is the Public Access Catalog. This module is designed to either partly or completely replace the card catalog in a library. It maintains authority files for authors, subjects and series. The capacity of a user's hard disk is the only restriction on the size of the collection. Full MARC records require an average of 3.5K of storage (i.e., every 10,000 items require 35 MB of storage). Each item in the collection may have up to four author/added entries, two series statements and 10 subjects or keywords. A complete password protection scheme prevents unauthorized entry to restricted areas, such as data entry, and automatic saving and log files may be activated by a user. Data from other automation systems (IBM, Apple or Macintosh), MARC records or MicroLIF records may be uploaded to the database. The system operates in either color or black and white.
$995 retail; single user
$1,495 and up retail; multiuser
Richmond Software Corp.; 3960 Fallbrook Dr.; Duluth, GA 30136; 404-623-4898 or 800-222-6063

MacCards
Catalog card and label production program
Macintosh Plus or larger; System 6.04 or later; ImageWriter I or II or LaserWriter.
MacCards is a catalog card and label production program for libraries. It offers several options for the format and production of catalog cards and labels. All of the power and intuitive features of the Macintosh are available through icons, graphics, pull-down menus and visible commands. With MacCards, a library builds an unlimited database of bibliographic records that can

be searched, edited and re-used at any time, while satisfying the immediate need for catalog card production.
$269 retail
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

■ **MARCReader 2.0**
Utility to open and to display MARC records in readable format
Macintosh Plus or larger; System 6.0.4 or later.

MARCReader is a utility program written to open and to display MARC records in a readable format. The program was written at the suggestion of the Library of Congress. MARCReader is compatible with all MARC records. Users can display the MARC records outside of the library system in which they will be used. The leader information, fixed fields, tags, sub tags, leading indicators and variable length fields are all displayed. Users can browse and search a complete file of MARC records that contain specific information. Each MARC record can be viewed but not edited. A single MARC record can be deleted without affecting other records in the file.
$69 retail
CASPR; 635 Vaqueros Ave.; Sunnyvale, CA 94086; 408-522-9800, 800-852-2777 or 408-522-9806 (fax)

Stauffer Gold
Newspaper library system
Macintosh Classic or larger; hard disk drive; System 6.0.4/Finder 6.1.4 or later.

The Stauffer Gold newspaper library system uses optical disks for storage of stories. It features automatic filing and retrieval of stories, plus interfacing with most popular editorial front-end systems. The system may be used on AppleShare. Other features include: every word in every headline and story are automatically indexed for a full-text search; a selective-vocabulary quick search; short-cut proximity and wild card searching; search by date, reporter, category and newspaper name; stories that are found are displayed in an easy-to-use list by headline, date, reporter, category and newspaper name; key words can be manually added to text; users may change, delete or print all or part of the story list or text; the capability to copy to other disks; a full screen of text is provided with headlines; search words are highlighted on screens and printouts; and more. Stauffer Gold is System 7 compatible.

Winnebago Cat For The Macintosh
Materials management
Macintosh with 68020 processor or larger; 4 MB of RAM; 1.4 MB floppy drive; System 6.0.5 or later.

Winnebago Cat for the Macintosh lets users look up materials using 1, 2, 3 keywords or phrases. It searches using Boolean logic and materials can be looked up by subject, title, author, keywords, notes and call number. The program stores USMARC records and prints bibliographies. It can also print keyword lists, material lists, subject lists and usage reports. The program is easily networked.
$1,495 retail
Winnebago Software Co.; 457 E. South St.; Caledonia, MN 55921; 507-724-5697, 800-533-5430 or 507-724-5711 (fax)

Winnebago Circ For The Macintosh
Circulation management
Macintosh with 68020 processor or larger; 4 MB of RAM; 1.4 MB floppy drive; System 6.0.5 or later.

Winnebago Circ for the Macintosh stores up to 300,000 materials and can serve up to 100,000 patrons. It checks in, checks out, renews and reserves materials with the keyboard or barwand. Materials and/or patrons can be added on the fly while in circulation. Materials can be looked up by subject, title, author, material number, patron name and number, and call number. Winnebago Circ can print a wide variety of reports on patrons and materials, including helpful statistics. It also calculates and tracks overdue fines until paid and is easily networked.
$1,495 retail
Winnebago Software Co.; 457 E. South St.; Caledonia, MN 55921; 507-724-5697, 800-533-5430 or 507-724-5711 (fax)

Vertical Markets/ Manufacturing

A-Plan
Assembly manufacturing process planning software
Macintosh Classic or larger; 4 MB of RAM; 20 MB hard disk drive.

A-Plan is assembly manufacturing process planning software. Traditional text descriptions of assembly operations may be combined with color frame grab images, full-color video with sound of assembly procedures, sound tracks for verbal directive to assemblers (in any language), CAD vector graphics and scanned graphics to form multimedia assembly procedures. The system includes shop floor data entry and validation for performing computer-based calculation and data entry. Online and Balloon Help is provided. Material lists are coordinated with assembly operations at all times. Also included are: inspection subsystem for viewing and logging inspection procedures; employee skill matrix for log control that only permits access to assembly personnel with required skills; supervisor authorization by employee badge number to activate edit mode; and distribution subsystem for date and time effectivity control of assembly instructions by part number and shop floor workstation. Full data compression of 32-bit color imaging is provided (up to 50 to 1 compression for still images and video). TIFF add-on support is available for decompression and display of CCITT Group III-1D, III-2D and IV, A through E-size and larger originals and gray display from bi-tonal data (no added hardware needed).
$495 retail
Microneering; 211 E. Culver Blvd., Ste. Q; Play Del Rey, CA 90293; 310-306-1153 or 800-423-0814

AmeriChem AutoPlate
For real-time monitor and control of metal finishing operations
Macintosh II; 2 MB of RAM; color monitor.

AutoPlate is a software package for the real-time monitor and control of plating and metal finishing operations. Featuring an advanced random-loading algorithm, AutoPlate automatically controls hoist movement, process times, rinse flows, filtration, fill and drainage, pH/conductivity, rectifiers and ultrasonics. Initial set-point temperature and deviation tolerances may be specified for heated tanks. An easy-to-use recipe file allows the rectifiers to step current up or down, with up to five steps possible. Data collection/storage capabilities are available for date, time, part type, lot number, operator ID and process parameters. The user interface is custom designed to suit a customer's wet processing setup. The price depends on the number of stations, I/O requirements and the complexity of the recipes.
Call for pricing
AmeriChem Engineering Services; 3430 E. Broadway; Phoenix, AZ 85040; 602-437-1188 or 602-437-4860 (fax)

AnaView
Allows users to control and monitor Anafaze loop controllers from a Macintosh
Macintosh Plus or larger; System 6.0.4 or later.

AnaView allows National Instruments' LabVIEW program to connect to Anafaze controllers and networks. The Anafaze 8-loop, 12-loop and System 32 controllers are ideal for small and medium-size control projects, especially temperature control applications for the food, chemical and biotech industry. Anafaze controllers combine loop control and discrete I/O in one small package. AnaView allows users to quickly create LabVIEW applications that communicate to Anafaze controllers. It supports both point-to-point and multidrop configurations. Nearly 100 VIs (Virtual Instruments) are included.

Applied Stats
Integrated statistical process control workstations and factory networking
Macintosh Classic or larger.

Applied Statistics, Inc. is a developer of turnkey industrial workstations that fully automate data acquisition on a real-time basis for SPC and process monitoring. Turnkey systems include gages or sensors, the computerized WorkStation, Applied Stats software, installation, training and service to ensure full system operation and optimum return on investment. Applied Statistics' WorkStations interface with a wide variety of hand gaging, multigaging, CMMs and other sensing devices. The system gathers, calculates and graphically displays data that makes an operator's job of implementing SPC easy, fast and accurate. Multigaging improves measurement consistency by engineering out the source of gaging variability. Variable, Attribute and Short Run SPC analysis is provided.
Call for pricing
Applied Statistics, Inc.; 3080 Centerville Rd.; St. Paul, MN 55117; 612-481-0202, 800-331-1068 or 612-481-0410 (fax)

Applied Stats Analyst
Provides production review and offline SPC analysis
Macintosh Classic or larger.

Applied Stats Analyst is designed to integrate with the production version of the software and provide production review and offline SPC analysis, but without the comprehensive data acquisition capabilities of the standard Applied Stats package. It reads and edits Applied Stats files directly and continues to allow customization of the import and export file format so that all ASCII files, which may contain data from experiments or other analytical tools, can be read directly and easily.
Call for pricing
Applied Statistics, Inc.; 3080 Centerville Rd.; St. Paul, MN 55117; 612-481-0202, 800-331-1068 or 612-481-0410 (fax)

Assembly View 2.0
Design For Manufacture (DFM) analysis tool
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later.

Assembly View allows engineers to perform Design For Manufacture (DFM) evaluations quickly and intuitively during conceptual design, before parts and processes are specified in detail. At its core is a proven Design For Assembly (DFA) methodology, developed by Westinghouse Electric Corporation and enhanced by Sapphire, aimed at eliminating unnecessary parts and maximizing ease of assembly. Assembly View predicts assembly times and calculates manufacturing costs, part counts and part standardization measures. Assembly View can be customized with Custom View to include a company's parts and process capabilities.
$1,500 retail
Sapphire Design Systems, Inc.; 845 Oak Grove Ave., Ste. 115; Menlo Park, CA 94025; 415-321-3595 or 415-321-8245 (fax)

Autovision
Industrial machine vision system
Macintosh Quadra and Power Macintosh family; 12 MB of RAM.

Autovision is an industrial machine vision system for automatic inspection of manufactured parts. The system measures more than 200 geometric quantities, such as distances, angles, areas, roundness, part count and part registration, as well as feature location and offset and template matching qualities. The measurements can be calibrated to real world units. The system acquires images from standard video sources, analyzes images using processing techniques that include pixel counting, connectivity, gray scale, normalized correlation, Hough transform, mathematical morphology and local convolution operators, with results automatically interfaced to other factory equipment using user-selectable digital, analog or IEEE-488 I/O. A programming environment is also available for customizing (scripting) the application in an interpretive language or in C. Application areas include gauging, assembly verification, flaw detection and product identification.
$12,250 to $20,180 retail; pricing varies upon configuration

Barrage
Bar-coded document production
Macintosh Classic or larger or PowerPC; hard disk drive; System 6.0.3 or later; bar-code or Macintosh-compatible printer.

Incorporating graphical document layout features, diverse data-flow capabilities and flexible print-control mechanisms, Barrage provides an easy-to-use tool for designing and producing bar-coded documents, labels, tickets and tags. Most bar-code symbologies are supported, and users can print on laser printers or Intermec, Zebra and Fargo bar-code printers. Turnkey systems are available.
$500 to $875 retail

Bill Of Material
Bill of material package
Macintosh SE or larger; hard disk drive; 2 MB of RAM and accelerator board or Macintosh II highly recommended; Double Helix.

Bill Of Material is a complete bill of material package designed for users of Odesta's Double Helix II DBMS. It can handle an unlimited number of ingredients per formula, or parts per item and an unlimited number of subassemblies or subformulas with no restriction on the number of structure levels. The program will handle multilevel costing, costing from purchased items up each level to the finished product and multilevel production capability working from the end product down through subassemblies to purchased raw materials. Inventory is kept track of by stock on hand, quantity ordered and quantity reserved. A consolidation module is provided that gives a consolidated picture of the total amount of each material needed to complete a finished product, along with its usage distribution in the various subformulas or subassemblies. Also provided is a where-used capability to show all products using a specified raw material.

■ **Business Partner**
Inventory management
Macintosh SE/30 or larger; 4 MB of RAM; System 6.0.2 or later; hard disk drive.

Business Partner provides general functions such as purchase orders, receiving/receipts, invoicing or monthly statements, shipping/packing lists, stock transfers and financial, which includes checking, client statements and book keeping. Business Partner has the ability to handle complex inventory control issues. Stock can be placed in either general inventory or segregated by project. This means an item can be stocked in as many locations as desired and grouped with other related stock items. On creation of a new project, the search function will locate every instance of the stock item and enable stock transfers between existing projects and the new project. Shortage lists can be generated for a project based on what is missing or short in current inventory, and "request for quote" faxable forms can be produced to issue to potential suppliers. Reports are available to show previous suppliers and pricing on any given stock item. Master part numbers can be assigned and cross referenced for similar parts from multiple manufacturers. Customization services are also available.
$750 retail

BusView
LabVIEW drivers for AEG/Modicon PLCs
Macintosh Plus or larger; System 6.0.4 or later.

BusView allows users to control and monitor Modbus devices from a Macintosh. BusView links National Instruments' LabVIEW program to AEG/Modicon Programmable Logic Controllers (PLCs). Process engineers and systems integrators can quickly create LabVIEW MMIs to supervise AEG/Modicon PLCs or any Modbus device. With BusView, LabVIEW can read and write discrete and analog values stored in AEG/Modicon 984, 884, 584, 484 and 384 series controllers. ASCII and RTU framing methods are supported. BusView will connect to any device conforming to the Modbus Protocol Standard published by AEG/Modicon; this includes dozens of controllers made by third-party vendors.

CaliachMRP
Professional, multiuser manufacturing management system
Macintosh Plus or larger; hard disk drive; printer; server for multiuser; Omnis 5.

CaliachMRP provides an integrated manufacturing control system for multicurrency quotes, sales orders and purchase orders; multilocation inventory management with LIFO, FIFO and average cost options; integrated engineering data with graphics; multilevel Bills of Material with Where Used and Cost Roll-up capabilities; selection options for demand to drive MRP; interactive production scheduling and capacity planning; shop floor data collection for cost and performance information on work centers, operations and people; vendor quality rating capability; cash flow and financial planning; what-if analysis and ad hoc reports; and Accounts Payable, Receivable, General Ledger, Asset Register and Ledgers Manager. Unique features include an open, documented database with linkage to user-developed code; special import and export routines; comprehensive user-expandable online help; USA, plus Canadian and European VAT sales tax; explicit user security control; and ISO 9000 support. CaliachMRP can be used on a mixed network with PC compatibles under MS Windows.

The Controller Series
Accounting package for manufacturers and distributors
Macintosh Classic or larger; System 6.0.4 or later.

The Controller Series is a totally integrated, online, multiuser accounting package for manufacturers and distributors that includes MRP II, purchasing, shop floor control, inventory control, job costing, order entry with product/order configuration, accounts receivable, accounts payable and general ledger. The system includes more than 300 management reports and allows bar-code data entry. The Controller also integrates with Great Plains Accounting Payroll, AP, AR and GL, and has consolidated, multicompany reporting through Great Plains. It is seamlessly cross-platform, using the Macintosh and Windows platforms over a variety of networks. A true Graphical User Interface (GUI) makes The Controller extremely accessible. Total system integration means data is entered once, and flows through to all appropriate modules. It calculates all manufacturing requirements, shop floor scheduling, purchasing requirements, etc., from data entered as daily functions are performed. It helps any size business gain better control of production and financial operations in an easy-to-implement and -understand system.

Diagnostic Advisor 2.2
Software tool for rapid development of intelligent industrial diagnostic systems
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later.

Diagnostic Advisor is a software tool that can help reduce machine and equipment downtime and other problems that relate to malfunctioning machinery, such as rework, scrap, work-off, equipment slowdowns, environmental hazards, etc. Systems built with Diagnostic Advisor provide these benefits by speeding up diagnosis and repair of machinery, equipment and process malfunctions. It is an easy-to-use tool that guides users step by step through diagnosis, repair procedures and restart/setup procedures through pictures, photos, schematics and text. Version 2.2 adds the ability to hook to other data sources, such as CMMS, SPC, spreadsheets, PLCs and sensors.

FranklinBHR For Macintosh
Automates the process of obtaining a Budgeted Hourly Rate (BHR)
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.7 or later.

The FranklinBHR is a unique software program developed to automate the process of obtaining a Budgeted Hourly Rate (BHR). It is a concise tool in helping users establish these important rates. After identifying specific information, the FranklinBHR can generate a variety of detailed reports that break down each item in the particular cost center. The reports produced are Specifications of operation, Fixed costs, Variable costs, Manufacturing costs and finally All-inclusive costs. The object of developing a BHR is to accurately reclaim all costs incurred in the production, administration and sales of a product. The procedure must include all elements of cost for which the customer must pay for, such as material and equipment costs. Cost recovery is a very critical procedure. The power behind the FranklinBHR is its accuracy in reflecting company costs without inflating or minimizing them.

HighwayView
Allows users to control and monitor Allen-Bradley equipment, including an entire factory, from a Macintosh
Macintosh Plus or larger; System 6.0.4 or later.

HighwayView allows National Instruments' LabVIEW program to connect to Allen-Bradley Data Highway/Data Highway Plus networks. It allows users to quickly create LabVIEW applications that communicate to Allen-Bradley asynchronous interface modules connected to PLC-2, PLC-3, PLC-5 and SLC-500 programmable logical controllers. It supports both point-to-point and multidrop configurations. Also included are sample VI (Virtual Instrument) to upload and download PLC programs and VI to interactively examine data tables in PLCs. Ethernet support available for 5/20e, 5/40e, etc.
$795 retail
SEG; 1 Dana St.; Cambridge, MA 02138; 617-492-6664 or 617-661-6483 (fax)

Image Analyst
Scientific image processing and analysis
Macintosh Quadra and Power Macintosh family; 12 MB of RAM.

Image Analyst is a menu-driven image processing and analysis software package. This intuitive interface allows users to quickly apply the latest image processing algorithms without the complexities of traditional programming. It is designed to process both live video and stored image files, and to extract quantitative data. Image Analyst comes with an extensive set of interactive image examination tools, image processing routines and powerful image analysis options. Image processing capabilities include user-configurable linear and non-linear filters, intensity scaling, pseudo-color and mathematical morphology. Image analysis options include pixel counting, connectivity analysis, gray-scale analysis, edge detection, Hough transforms, normalized correlation, dimensional measurements and statistics. Two distinct methods of analyzing an image are provided: Interactive Analysis and Automatic Sequencing. Interactive Analysis lets users use graphical interface tools to display and analyze an image. Automatic Sequencing allows users to create a macro-like sequence of image processing steps that can be repeated with a single key stroke. The latest version includes the capability of creating irregular regions of interest.
$2,000 retail

Acuity Imaging, Inc.; 9 Townsend West; Nashua, NH 03063; 603-598-8400 or 603-598-4684 (fax)

Image Analyst/Source
Image processing and analysis
Macintosh Quadra or Power Macintosh family; 12 MB of RAM.

Image Analyst/Source provides the same menu-driven applications as Image Analyst, but in an open and user-customizable form. Image Analyst/Source is an easy-to-use method for modifying Image Analyst using MacRAIL, a high-level language environment. MacRAIL can be used to modify the source code and access the complete Automatix Imaging and Guidance libraries. With Source, users can add their own custom algorithms, interface to serial, digital and analog I/O and generate customized applications, including pull-down menus and dialog boxes under the Macintosh user interface. The Imaging and Guidance libraries not only give users access to complete predeveloped image processing and analysis algorithms, but allow access to subroutines for measurement features not interfaced to the standard Image Analyst package.
$9,500 retail

MacRag
Tracks all phases of operation for garment manufacturers and sales
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

MacRag is a comprehensive software solution for the apparel manufacturer, importer or distributor who wishes to track all phases of operation. The system can record all aspects of garment sales and production, from customer Order Entry through Invoicing, and manufacturing from Raw Materials purchasing to the completion of Finished Goods. MacRag is modular and expandable, but all versions, from single-user Order Entry/Invoicing to multiuser complete systems, use the same file structures. This means users can start with a basic system and grow into a full-featured multiuser operation seamlessly. Because MacRag was designed by garment manufacturers, all necessary reports are available, most with a highly-flexible selection interface that allows for simple retrieval of the exact data required.
$2,500 and up retail
Third Wave; 4141 Redwood Ave.; Los Angeles, CA 90066; 310-823-2470 or 310-823-7025 (fax)

MacSys Pricedex
Catalog/price list generation system
Macintosh Quadra 610 or larger.

The MacSys Pricedex is a 4th Dimension-based catalog/price list generation system best suited for firms with large numbers of technical part/product listings. As the stand-alone version of the Price List Application and Parts Server, this system provides powerful price maintenance and database publishing features. Price lists can be built based on variable selections of parts and product lines. A user-configured output screen allows for the customization of price lists by client or price regime. The "catalogs" generated include such features as two-sided printing and variable fonts and formats within each part/product listing. Catalogs can be easily user designed for specific clients requiring different part/product listings, pricing tiers and languages. A 600-page catalog can be printed in less than four hours using a standard laser printer. It is customizable as required.
$18,500 retail
MacSys Inc.; 362 Terry Fox Dr., Ste. 200; Kanata, Ontario, Canada K2K 2P5; 613-591-9200 or 613-591-8089 (fax)

MacWareHouseExpress
Wholesalers, manufacturers and distributions centers
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

MacWareHouseExpress provides wholesalers, manufacturers and other partners in the distribution chain with a one-point, interactive, multiuser system integrating A/R, A/P, purchasing, order scheduling, shipping, receiving, RMAs, inventory control, invoicing, credits, commissions, statements and more. Users can use the supplied UPS table or input just the part of that or any other shipping table they use. Freight and insurance costs compute automatically from the shipping company, its table of rates, the zone, type of shipping and weight being shipped. Users can check account history for both customers and vendors rapidly with "click down" to invoices and payments for customers and POs and disbursements for vendors. A completed sales transaction automatically updates associated inventory records. Users can generate paperwork in batch or as needed.
$795 retail; single user
$179 retail; each additional user (minimum two)
Synergy Marketing Communications, Inc.; 11 Joseph Ct., Ste. 213; Syosset, NY 11791; 516-935-9151 (phone/fax)

MainPlan/PM
Equipment maintenance management
Macintosh LC or larger; 4 MB of RAM; 40 MB hard disk drive.

MainPlan/PM is a computerized equipment management system that provides scheduling, work orders, tracking, parts inventory, costs and reporting. The program follows the essential logic of maintenance operations by taking users through the planning, scheduling and task definition steps, and facilitating the issuance of Work Orders and the capturing of information. Based on a relational database, the program was designed to permit true interactive maintenance management by allowing managers to examine schedules, equipment history, reports and inventory directly on the screen.
$4,995 retail; single user
$6,995 retail; multiuser
M2 Limited; 9210 Wightman Rd., Ste. 300; Gaithersburg, MD 20879; 301-977-4281, 800-927-4281 or 301-926-5046 (fax)

The Manufacturing Controller 7.1
Integrated accounting package for manufacturers
Macintosh IIsi or larger; 8 MB of RAM; hard disk drive.

The Manufacturing Controller is an integrated accounting package for manufacturers, including Order Entry, Accounts Receivable, Purchasing/Payables, Lot Tracking, Inventory Control, Job Costing, M.R.P., Shop Floor Scheduling and General Ledger. In Accounts Receivable, amounts may be applied to open invoices, uninvoiced sales orders and as non-accounts receivable related deposits to any other G/L account. In Order Entry, both stock and non-stock items can be entered. Inventory records levels at up to 99,999 locations. M.R.P. calculates manufacturing requirements based on scheduled delivery quantities, stock on hand and the amounts expected to be received through outstanding POs. In Shop Floor Scheduling, reports show day-to-day changes in the expected level of all inventory items because of production requirements and expected PO receipts. Purchase requisitions can be created and, if approved, automatically converted to POs. In Employee Information, screens are available to record pay rate and commission rate, as well as keeping track of vacation time. General Ledger offers both sub-accounts and cost centers. More than 300 reports are available. The program also integrates with Great Plains Accounting.
$5,000 to $25,000 retail; depending on modules purchased
Qube Software, Inc.; 86 W. Yale Loop; Irvine, CA 92714; 714-559-5659 or 714-551-1621 (fax)

Manufacturing Job Cost II V7.1
Quotes, Order Entry, Invoicing, Production Control, Job Costing, Scheduling, Inventory Control, Material Forecasting, Engineering, Bill of Material, MRP, Purchase Orders, Accounts Payable, Accounts Receivable, Payroll, General Ledger
Macintosh SE or larger; hard disk drive; printer.

Manufacturing Job Cost II provides a fully integrated, multiuser accounting system for manufacturers of discrete and/or repeat order products. System security controls individual user access to specific modules and functions. The system offers multiple window display for operation of the system and reviewing of stored information; online help windows to automatically enter information during data entry; and user-developed ad-hoc reporting. Inventory control of raw material, sub assembly and finished goods can be maintained in single or multiple warehouses. Sales

Advanced Data Systems

orders can be generated for either inventory or warehouse using standard or discount pricing structures. A multilevel bill of material maintains all material, operations and outside service requirements to produce a product and automatically generates production work orders. The system tracks jobs in production in terms of schedule, estimate to actual cost and efficiency and provides capacity requirement information by department and operation. Jobs are scheduled for production or re-scheduled from any place in the production cycle. Multiple company accounting can be maintained for profit and expenses by division and/or departments, and includes consolidation of income statements. The integrated accounting modules provide industry standard accountability and audit trails. The system operates on a network and is System 7 compatible.
$17,300 retail; standard multiuser package
Advanced Data Systems, Inc.; PO Box 5717; Winter Park, FL 32793; 407-657-4805 or 407-657-4472 (fax)

MasterSeries
Production control and accounting software
Macintosh SE or larger; 2 MB of RAM; hard disk drive.

The MasterSeries is multiuser production control and accounting software for job shops and manufacturing. Modules include Quotes, Sales Orders, Purchasing, Job/Router, BOM/MRP, Tracking, Scheduling, Tool Crib, AP, AR, Payroll and General Ledger. Also incorporated are inventory control, job costing, bar-code support for data capture and image storage (e.g., blueprints, tooling, etc.). The router editor includes inspection and tooling detail, plus pictures of dimensions. BOM explodes to 10,000 levels and features unlimited lines. The MasterSeries is an open system; source code is available and there is an interactive mode for simple changes with full modification support for extending the system. Designed for the Macintosh, the MasterSeries employs the graphical user interface, color, graphics and fonts. ReportGen, a powerful report tailoring routine, is found in all modules. Other features include: extensive security system, unique documentation, guided implementation plan, data transfer service and superior technical support. MasterSeries was designed by and is published by manufacturing veterans.
$800 per module retail; 12 modules

MaxMotion For Routing & Woodworking
Motion control software
Macintosh SE or larger; System 6.0.5 or later.

MaxMotion is motion control software. Another application of this software is available to drive the following plotters for vinyl cutting: Aristo AG75; H.I. DMP-66; Graphtec FC 2100-50, FC 2100-90A, FC 2100-120; Ioline Art Pro 3700, Art Pro 4000, Signature 5000; Mimaki CG-45, CG-60, CG-90, CG-120; Roland Digital CAMM-1/20, 1/24, 1/48 and CAMM-2 Engraver; and Vytek 1000. MaxMotion is already available to drive the Gerber plotters (GS15, HS15, GS750 and HS750). MaxMotion transforms PostScript drawing files into templates that can direct the creation of three-dimensional solid objects. Applications include: woodworking; engraving, routing and shaping of metal, plastic or wax; three-dimensional model making; control and movement of light beams for R&D labs; manufacturing prototypes; precise control for movement and positioning of telescopes or microscopes; pre-determined camera movement; architectural model making; film making; and hot wire cutting

Multi-LiNX TrueRightNow Template
Mixed-media database for manufacturing plants
Color Macintosh with 68030 processor or larger; 8 MB of RAM; 386 or larger PC with Windows 3.1.

The Multi-LiNX TrueRightNow Template is a mixed-media database for teams that design, operate or maintain complex machinery and processes in a manufacturing plant that must meet governmental and world class standards for safety, skills, documentation and records. The team can input, store, share, find, view, print, learn, update and keep records on all the documents, data, diagrams, pictures, video and training they need to do their jobs right the first time. The Multi-LiNX TrueRightNow Template is a visual databank with "smart target" navigational tools providing five click access to 6.5 million documents with no query language. The Template is delivered with placeholder documents and examples for organizing proprietary information. During information entry and throughout the life of the plant, the Template elicits and arranges information by imposing a structured analysis of the equipment, process chemistry, process mechanics and manufacturing technology actually used in a manufacturing plant. When full, the Template contains the necessary information users must have at the jobsite to run profitably, safely, legally and with the minimum workforce.

Parameter Manager Plus V3.68
Statistical process control software
Macintosh Plus or larger; external disk drive or hard disk drive; ImageWriter or LaserWriter.

Parameter Manager Plus is a technical graphing and analysis software program. It uses built-in routines to instantly produce trend plots, forecasts, strip charts, hi-lo charts, histograms, scatter diagrams, linear, linear-log, log-log, statistical quality control (SPC) charts and more. The program's worksheet can handle up to 256 columns and 32,767 rows. Users can manually enter data or import it from any ASCII file and create accurate professional graphs and charts instantly. The results generated can further be enhanced with a built-in tool palette that contains drawing and text tools for adding additional information to the results. Built-in analysis routines are available to give users an array of choices for quickly showing data trends and comparisons. Users can analyze trends, forecast future values or events, compress large databases into understandable graphs and apply statistical process control charts to get a graphical picture of the characteristics of their process. Parameter Manager Plus has a unique database feature that manages data by time, date or sample number to facilitate powerful numerical data management. It provides for accurate management and display of unequal time increment data and sorts, joins or links data with regard to chronological order from other Parameter Manager Plus databases. Users can also enter their own equations for data analysis, choosing from more than 100 predefined functions and an array of mathematical operators.

Integrated RS-232 communication software, pmTalk, is used for directly entering data into the Parameter Manager Plus database from other computer systems, data loggers and instruments for instant technical analysis. It includes comprehensive data import features and a macro capability for setting up an automated procedure. pmTalk can also be used to create a custom user interface for an operator for data entry, automated data analysis and graphing.

BlackHawk Technology; PO Box 2013; Morgan Hill, CA 95038; 408-776-1106, 800-528-9333 or 408-776-1107 (fax)

Personal DataRecorder System
Automated data collection and production reporting system
Macintosh LC III or larger; 1 MB of RAM; 20 MB hard disk drive.

The Personal DataRecorder System (PDR) is an automated data collection and production reporting system that will collect: daily production, labor, time and attendance, product movement, materials, quality control, SPC/SQC data and other production data. Up to 128 PDR Data Collection Terminals can be connected to a Macintosh to collect and report just about any data desired. PDR Terminals (8 by 8 inches) have an alphanumeric keypad, 48-character LCD display and an optional bar-code wand. Specific prompts (fields) and sequence of prompts can be defined to be displayed on the PDR Terminals. Data is entered according to the prompts, such as: Employee#, Job#, Work Center#, Operation#, Pieces Completed, Scrap, etc. Data is verified, time-stamped, stored for reporting and/or communicated real time (or batched) to another computer. The optional report writer allows most any type of report or data file to be created, such as: Job Status, Employee Daily Production, Inventory, Time and Attendance Reports.
Call for pricing; depends on number of data collection terminals
Data Specialists, Inc.; 715 Florida Ave., Ste. 411; Minneapolis, MN 55426; 612-541-0440 or 612-541-1149 (fax)

PhotoMemory
Engineering services system
Macintosh II or larger; 4 MB of RAM.

PhotoMemory is used to paperlessly manage the engineering change process, to catalog and track drawings and documents and to maintain configuration and bill of material records. Change orders are entered into PhotoMemory — eliminating the need for paper forms — and are then tracked through review, approval and implementation. Electronic signatures make approval processing fast and easy. Disposition, revision control and other change effects are recorded and reported. PhotoMemory's cataloging serves as the central repository of document information. Status tracking reports current and historical activity in such areas as drafting, review and document control. PhotoMemory's launching feature automatically brings up documents in their native applications (e.g., Word or Generic CADD). A built-in bar-code system eases hard copy tracking. Bill of material and configuration records are easily indexed against drawing and document records. PhotoMemory is also available for MS/Windows and can seamlessly share data between Macintosh and Windows users.

Quality Master
Provides for data collection, analysis and reporting of supplier and part quality information
Macintosh Plus or larger.

Quality Master provides for data collection, analysis and reporting of supplier and part quality information. It allows entry, import and/or SQL access to purchase order, receipt, inspection and failure information. Quality Master then provides comprehensive inquiry, reporting and charting on supplier performance, part quality and on-time delivery. Quality Master runs on Macintosh and Windows PCs and supports both platforms concurrently. In addition, it provides for export of information to spreadsheets and statistical quality control packages for further analysis. It comes in three versions: the single-user version, the LAN-based version that supports any Macintosh or PC file server and the Enterprise version that utilizes any SQL back-end database.

QuickSurf
3-5 axis CAM software
Macintosh with math coprocessor.

NCM Systems develops, markets, sells and supports QuickSurf CAD/CAM software for CNC programming on the Macintosh computer. QuickSurf is a comprehensive, three-dimensional package designed to take a user from the initial geometry creation through actual generation and downloading of a numerical control program for controlling NC/CNC machines for manufacturing. Features include true three-dimensional surface machining in 5, 4 and 3-axis, plus 2.5-axis, 4-axis wire EDM and NURBS capabilities; and a powerful, yet easy-to-use interface with bidirectional IGES/DXF data transfer.
$10,000 retail
NCM Systems; 240 Newport Center Dr. E, Ste. 215; Newport Beach, CA 92660; 714-640-8866 or 714-640-4884 (fax)

ShopKeeper Plus
Wholesale, mail order, billing, Accounts Receivable, Inventory and retail system
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; printer.

ShopKeeper Plus consists of Sales, Point of Sale, Invoicing, Inventory, Billing, Accounts Receivable and Customer Files, integrated together as a single stand-alone compiled program. It was developed to provide a Macintosh front end for VARs and dealers putting together billing or point of sale programs for wholesalers, small manufacturers or mail order companies. It allows dealers or VARs to provide almost a custom solution at a very low cost to customers. In addition to maintaining a complete inventory, accounts receivable and customer sales histories, the program will automatically create export files for remote or local pick up by any other computer. This allows low training cost Macintosh computers on the front end of the system and anything from a mainframe on down in the back of the house or at a remote location.
$495 retail; single user
$995 retail; multiuser

Task Data System (TDS)
Organizes and manages job and equipment-related training information
Macintosh IIci or larger; 8 MB of RAM; System 7.0 or later.

TDS is a powerful relational database program that manages job and equipment training information for manufacturing facilities. With TDS, users can organize task-related data, such as safety precautions, quality standards, specs, required tools and step-by-step procedures for multiple tasks all in one comprehensive file. The program automatically maintains linkages between task-related information. TDS offers more than 25 pre-formatted reports, allowing users to quickly and inexpensively generate professional-quality training manuals, complete with equipment-specific illustrations. Reports can be selected by multiple criteria, including date, job title, task learning difficulty and task frequency. All task data pertaining to a job title, equipment area or entire department — including drawings, charts, photographs and other visual aids — are stored directly in the database. Specifications include: pull-down menus and overlapping windows; users can print reports to screen, file, printer and page preview; graphics can be color or black and white PICT; multiple user capable; and simultaneous data file access across Windows, OS/2 and Macintosh platforms. It is System 7 compatible and supports Publish and Subscribe.
$5,995 retail; Administrator package
$399 retail; each additional user
Custom pricing and configurations are available

TDS Pro
Organizes and manages job and equipment-related training information
Macintosh IIci or larger; 16 MB of RAM; System 7.0 or later.

TDS Pro is powerful relational database program that manages job and equipment training information for manufacturing facilities. With TDS Pro, users can organize task-related data such as safety precautions, quality standards, specs, required tools, and step-by-step procedures for multiple tasks all in one compre-

hensive file. TPS Pro automatically maintains linkages between task-related information, plus the capacity to allow direct query of data files from shop floor workstations. TDS Pro gives shop personnel access to the most current training information, including safety, quality and step-by-step task procedures. Shop floor users can also browse visual aids stored in a TDS Pro data file. TDS Pro moves shop training from a paper-based process to an online system, while still providing the ability to generate hard-copy manuals quickly as needed. In addition, TDS Pro includes the interactive Training Progress Log. The progress log enables authorized personnel to designate when an individual, such as an operator or mechanic, has achieved proficiency in a specific job task. Comparative reports are available to show tasks completed to date by person, team, shift or department. Reports can be selected by multiple criteria, including date, job title, task learning difficulty and task frequency or use one of the more than 35 preformatted reports.

VG/Motion
Vision guidance package
Macintosh Quadra family; 12 MB of RAM; hard disk drive; high-resolution monitor with video card.

VG/Motion (for Image Analyst/Source) is an integrated vision guidance package. It is an optional RAIL software package for combining motion control with various inspection tasks. With VG/Motion, users have the capability to interface to an XY table and integrate vision analysis with table locations. Two very common applications for VG/Motion include: step and repeat the same analysis sequence when the sample size is larger than the field of view; and combine the results from the same camera at multiple locations to make high-resolution measurements. VG/Motion follows the same general user interface guidelines that are established by Image Analyst/Source. The user interface has not been changed significantly, except to introduce the Motion pull-down menu and does not eliminate any existing functions of Image Analyst/Source.

Vertical Markets/Mapping Software

ADC WorldMap For MapInfo, Macintosh Version
Comprehensive 1:1,000,000 scale vector map of the entire world
Macintosh SE/30 or larger; MapInfo.

ADC WorldMap, a comprehensive 1:1,000,000 scale vector map of the entire world, is the most detailed set of world-wide data available from a single source. ADC WorldMap is derived from the U.S. Defense Mapping Agency's Digital Chart of the World. It runs significantly faster than DCW and is ready to run with MapInfo software, which allows users to request information by region or by subject and modify the data for a wide variety of mapping applications. All the flexibility and user-friendly features users expect in desktop mapping are built into WorldMap to provide maximum operating ease and productivity. ADC WorldMap features include political boundaries, populated places, roads, railroads, utilities, airports, rivers and lakes and elevation information. The 1:1,000,000 scale ADC WorldMap containing all layers of information is available for the entire world on four CD-ROMs. The Whole Earth data set, with elevation information removed, is available on Disc 5.

ArcView
Geographic information system
Macintosh with 68020 or higher processor; 8 MB of RAM; 4 MB of disk space; System 7.1 or later; color monitor.

ArcView is a revolutionary, full-featured desktop geographic information system that allows users to access and visualize complex geographic databases, perform sophisticated queries, manipulate map features, create accurate, high-quality maps and calculate and summarize statistics about georeferenced information. ArcView's graphic menu interface provides an easy-to-learn, easy-to-use frontend to this powerful analytical and reference tool. ArcView can be easily integrated with other applications, such as spreadsheet and statistical programs, as well as business graphics and desktop publishing packages. ArcView can be used for a wide variety of applications, such as redistricting, AM/FM, tax mapping, land planning, crime analysis, market research and planning, environmental analysis, as well as many others.

Automap Road Atlas For Macintosh
Comprehensive route planning software program
Macintosh Classic II, PowerBook 140 or larger; 2 MB of RAM (4 MB recommended); SuperDrive; 4 MB of free hard disk space; color monitor recommended; System 6.0.7 or later.

Automap quickly and easily plans trips between any two points in the United States, Canada or Northern Mexico. Users just tell Automap where they are going, where they're starting from, what areas they'd like to visit (or avoid) and how they drive. The entire journey can be viewed on the screen or printed with a comprehensive driving directions table for easy reference during the trip. Its fast, fun, informative and can save users up to 50 percent on travel time and costs.
$99.95 suggested retail
Automap, Inc.; 1309 114th Ave. SE, Ste. 110; Bellevue, WA 98004; 206-455-3552, 800-440-6277 or 206-455-3667 (fax)

Azimuth 2.1
Allows a user to draw global views of the world's countries and states in the United States
Macintosh Plus or larger; 1 MB of RAM.

Azimuth, unlike clip art mapping programs, produces true, customized maps of the world. These maps are dynamic in that they can be generated from any distance or angle to different flat projections or in three-dimensional perspective mode. Azimuth ships with nine map projections, which can be placed on different layers and overlaid for comparison. Further, any line, circle, symbol, text or polygon entered into the base map layer becomes data that can be projected onto other map layers. Symbols, objects and text can be used to edit the base map, then plotted onto an "illustration" layer(s) for the further editing needed to produce a finished map. Azimuth thus functions as two programs in one: a mapping program that plots mapping data in latitude/longitude according to user specifications and an illustration program that functions in inches or centimeters, allowing enhancement of the base map without slowdowns due to redraw. A user may change scale while text, symbols and line weights remain constant. Sixty-eight fill patterns (32 editable) can be used to fill a map. Maps may be saved as PICT or EPS files and ported into any program that reads PICT or EPS. New in Version 2.1 is the ability to plot great circles. The Soviet, Yugoslav and Czech republics are also included. The U.S. Geographic Data CD offers Azimuth-compatible detailed information on rivers, streams, highways, cities, towns, national parks and more.

CogoMaster III
Assists users that deal with land and property ownership
Macintosh SE/30 or larger; 3 MB of RAM (4 MB with System 7); System 6.0 or later.

CogoMaster III is designed to assist surveyors, engineers, realty personnel, title offices, federal, state and local government employees and other occupations that deal with land and property ownership. In addition to the standard coordinate geometry routines used by surveyors, the software will plot the parcel being described on the screen and/or printer using the scale desired. Users will be able to enter the information directly from the deed or legal description and view the progress in graphic form. Surveyors can design subdivisions and check field work. The graphics and other information may be exported to other software.

Digital Maps For Macintosh
Maps of the entire planet
Macintosh SE/30 or larger; AutoCAD, MicroStation, MapInfo, ArcView or a GIS or CAD package that supports DXF file format.

American Digital Cartography (ADC) provides geographic data integration services for a wide range of industries, governmental agencies and educational institutions. ADC's development team converts raster and vector geographic data for easy use with almost all GIS and CAD programs. Custom programming is available. Users may choose from a large selection of base maps, including USGS Digital Line Graph (DLG 1:100,000 and 1:2,000,000 scale data for the entire US); EtakMap (electronic roadmaps with high positional accuracy for selected areas of the US); US Census Bureau TIGER (maps for the entire US and protected territories designed for the 1990 census); ADC WorldMap (1:1,000,000 scale maps with 17 layers of information for the entire globe); satellite imagery. Data such as contours, section lines and geographic names can be matched to the map in the appropriate coordinate system. Display of features (such as double-lined roads) is tailored to the needs of each project. All maps arrive with full documentation and include technical support. ADC offers choices, convenience and quality documentation.
Call for pricing; depends on base map selection, area coverage, layers of information and level of customization

Dimple
Integrated image processing system for earth scientists
Macintosh with 4 MB of RAM (8 MB recommended); color monitor; 1.44 MB hard disk drive; math coprocessor recommended; System 6.0.5 or later (System 7.0 or later recommended).

Dimple is an image processing system designed to provide the powerful image analysis tools that geoscientists require within an interactive and user-friendly interface. Dimple provides a comprehensive range of tools, including image analysis (histogram, cross plots, linear transect, statistical analysis); image enhancement (filters, sharpening, smoothing, contrast enhancement, pseudo-coloring); image registration & rectification (using ground control points or mathematical models); multispectral analysis (supervised and unsupervised classification, training area analysis, principal components, canonical analysis); image transformations (color composites, 3-D plots, contour modeling); and the ability for users to define new tools and use them in the same way as built-in ones. Dimple supports most common file formats, including ERDAS and microBRIAN, while a generic "foreign" format ensures that virtually all data sources can be imported directly. Dimple allows images, reports and cross plots to be copied and pasted into other applications to make producing reports or papers incredibly easy.

GAIA Software
Geographic access image and analysis
Macintosh LC or larger.

GAIA (Geographic Access Image and Analysis) software can display, manipulate and analyze satellite imagery, scanned aerial photos, airborne video and PICT or TIFF image. GAIA was developed specifically with conservation groups, universities, towns and schools in mind. GAIA's capabilities are focused on displaying any earth imagery, including full LANDSAT or SPOT images, and allowing users to combine spectral classes into meaningful covertypes and analyze a given area for perimeter and acreage. GAIA also has full raster/vector integration and can overlay vector maps (from MapGrafix and Microstation) onto the raster imagery to superimpose roads, geopolitical borders, hydrography, etc. When vectors are co-registered, GAIA supports Global Positioning Systems (GPS) by displaying UTM coordinates for any pixel in an image.

GeoPoint BaseMap
Personal map-making tool
Macintosh Plus or larger; 2.2 MB of RAM; 2 MB of free hard disk space; System 6.0 or later.

GeoPoint BaseMap is an easy-to-use, general purpose, personal map-making application. Its purpose is to enable any computer user, at any level of sophistication, to easily create custom maps. BaseMap provides a palette of simple tools to define, display and modify map objects, such as point locations, paths or distance contours. The finished map can be printed, saved as a database or pasted as a graphic into other Macintosh word processing, drawing or presentation applications. GeoPoint also expects the installed base of BaseMap users to exchange data with other users, creating a data exchange standard that can grow significantly. Engineers and scientists can share location data based on project needs; teachers can exchange lesson plans with embedded map data; and business people can share maps showing pertinent information.

GeoQuery 4.0
Business mapping for sales, marketing, field service and business management
Macintosh with 68020 or large processor including Power Macintosh; 4 MB of RAM; hard disk drive; System 7.0 or later.

GeoQuery takes information from databases, contact managers, spreadsheets and mailing lists and displays it on interactive maps. These maps are commonly used for travel planning by field personnel, allocating sales and service territories, analyzing and targeting marketing programs and preparing business presentations. GeoQuery locates information on the map by Zip code. Five-digit capability is standard and nine-digit is available in the GeoQuery Plus product. The basic GeoQuery package includes maps of the United States with state and county boundaries, interstate highways and US routes and more than 26,000 cities, town and places.

GeoQuery Plus adds state routes, major roads and nine-digit Zip mapping. Other mapping files are available.

Hipparchus
C language function library that provides application developers with the geographic capabilities to deal with the "where" of an application
Macintosh 512KE or larger; math coprocessor; hard disk drive.

Named after the ancient Greek originator of latitude/longitude, Hipparchus uses a novel spatial indexing method for unprecedented speed, precision and flexibility — an open approach to location information. Hipparchus provides unconstrained modeling of zero, one and two-dimensional objects for sophisticated ellipsoidal modeling of points, lines and regions. Functions include: conversion from all coordinate systems; dynamic indexing; proximity, union and intersection; mapping and display; debugging; and third-order orbital modeler for satellite data. Hipparchus includes more than 260 C-language functions to integrate into applications using existing tools. Distribution also includes 20K lines of source code samples for instant "cut and paste" start up. Documentation includes: the 220-page Hipparchus Tutorial — an easy-read that explains concepts and how-to applications; and the 300-page Hipparchus Reference Manual — details each function with examples.

Landesign
Surveying and land, road and subdivision layout tool
Macintosh Plus or larger; floppy disk drive or hard disk drive; ImageWriter or LaserWriter; System 6.0 or later.

Landesign is surveying software designed for professional land surveyors, developers, planners and civil engineers. It provides interactive graphics, and all conventional Cogo features are supported. The program supports various types of intersections. Field traverses and side-shots can be computed and balanced with numerous options. All objects and traverses can be cut, duplicated, copied and pasted into the same or other documents, as well as into other programs. Landesign supports import and export of points in a text file format for bringing data into and out of other programs. Landesign allows the use of three-dimensional coordinates. These points can then be exported to a terrain modeling program to produce a contour map. Landesign allows data to be saved in its native file format and in PICT file format for import to any other CAD package that supports this standard file format. Drawings can be produced at virtually any scale, with any origin and a user's choice of units. Data may be read from various data collectors with the Data Collector Module (supports Lietz/Sokkisha, Pentax, Geodimeter, Topcon, Leica and compatible data collectors). Additional options are available for exporting to DXF, CGDEF, Claris CAD, MacDraw II and FlexiScript. Landesign is System 7 compatible.

$250 retail; Export Module
$325 retail; Data Collector Module (downloads information directly from a data collector to Landesign)
Compuneering Inc.; 113 McCabe Crescent; Thornhill, Ontario, Canada L4J 2S6; 905-738-4601 or 905-738-5207 (fax)

Landview
Contouring and terrain modeling program
Macintosh Plus or larger; System 6.0 or later.

Landview imports three-dimensional coordinates, triangulates the data and creates a contour map. Users can see contours after choosing just three commands. Landview can read data exported by Landesign, spreadsheets and DXF format (optional). It can export a contour map in PICT format or DXF format (optional; export in Architrion or ArchiCAD format also optional), which can then be imported by such applications as Landesign, Claris CAD and AutoCAD. When used in conjunction with Landesign's Data Collector Module, users can easily download data measured in the field and effortlessly display a contour map without any manual entry. Landview uses the TIN (Triangulated Irregular Network) method and respects user-defined breaklines. The TIN, which appears as a patchwork of triangles, is as precise as the data that it is created from; nothing is lost or approximated. Color is supported. With the optional Volumetrics Module, Landview is able to determine the amount of cut and/or fill between two surfaces or the volume between a surface and a datum.
$195 to $1,595 retail; depending on options
Compuneering Inc.; 113 McCabe Crescent; Thornhill, Ontario, Canada L4J 2S6; 905-738-4601 or 905-738-5207 (fax)

MacChoro II With Map Animation
Statistical mapping and map animation program
Macintosh Plus or larger.

MacChoro II with Map Animation is a data classification and map-animation program for the analysis of spatial data. Shadings are used to depict statistical data by area. The program includes six methods of data classification: Standard Deviation, Equal Interval, Quantiles, Natural Breaks, user-defined ranges and an Unclassed option with 16 shadings. Maps are normally updated in five to 10 seconds. A map animation is created by placing a series of maps in memory that depict different variables and/or different classifications of the same variable. These animation sequences can be played back at speeds up to 60 frames per second. The program includes four separate windows: a graphics drawing window, a fully functional reduced-view graphics window, a spreadsheet window and a text-edit window. A variety of legend styles are available. Outline maps can be imported from a variety of formats. Maps can be scaled and rotated. The program includes a U.S. by state map file and selected data sets. A U.S. by county data file with more than 32,000 points is available separately. Additional map files, including the world by country, Africa, Asia, Europe and South America by country are also available.
$295 retail; MacChoro II with Map Animation and United States by state digital map
$100 retail; U.S. Counties map file with more than 32,000 x,y coordinates
$50 each retail; additional map files
Image Mapping Systems; 516 S. 51st St.; Omaha, NE 68106; 402-553-2246

MAP II Map Processor V1.5
Image processing and raster geographic information system (GIS)
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

With MAP II, users can view, mark, measure and transform remote sensing images, field data scanned images and maps. Maps and images can be larger than memory size and made up of hundreds or thousands of rows and columns of map cells. Large or multiple maps and images can be imported or scanned and digitally mosaicked, processed in visual and quantitative ways and then printed. The program has powerful screen tracing tools, a rich set of image processing functions, visualization and color management, and output layout and printing facilities. The program comes bundled with HyperViewKit, a pictorial file and database navigation product.

MapGrafix Mapping System
Geographic information system
Macintosh IIcx, IIci, IIfx, Quadra or Power Macintosh; 8 MB of RAM; hard disk drive; math coprocessor recommended.

MapGrafix is a geographic information system that provides a dynamic and efficient method of capturing, managing, analyzing and displaying geographic data, both raster and vector. MapGrafix offers a graphics-based user interface, menus and flexible output, including laser printers, pen and electrostatic plotters. MapGrafix links every feature on a map with attribute information by linking to a database of a user's choice.

Analysis and map manipulation features perform spatial analysis, build polygons, merge maps and georelational structures and have access to map information on CD-ROM, videodisc and also to large-scale geographic information systems through the MapLink Module.

MapView supports multiple map projections, movement from one cartographic and coordinate projection to another.

MapGrafix Display allows analysis and database query without modifications of map coordinate data. Training, documentation, technical support and maintenance are offered.

MapInfo For Macintosh 3.0
Desktop mapping program
Macintosh Plus or larger; 4 MB of RAM; System 6.0.2 or later.

MapInfo is desktop mapping software that displays a user's data on maps of any scale, from street level to worldwide. Using MapInfo's powerful relational database engine, users can merge their data with maps and perform geographic analyses and data manipulation. Users can create pin maps, shaded maps and presentation-quality output that can be incorporated into desktop publishing applications. Users can display and manipulate data in three different views: map, text and a graph view. MapInfo has many other features, such as address matching, map and boundary editing, polygon searches, database record retrieval and zoom control. MapInfo for Macintosh is directly compatible with MapInfo for Windows, for Sun and for HP, and can directly read FoxBase+/Mac, Microsoft Excel spreadsheets and delimited ASCII files. MapInfo is System 7 compatible.

MapPower's Integrated Government Management System
Manages data, creates reports, draws graphics and presents information visually
Macintosh II family; 13-inch monitor.

MapPower's Integrated Government Management System manages data, creates reports, draws graphs and presents information visually by communicating with mapping software on the Macintosh. The software has been developed by drawing on the knowledge of state and local government workers solving real-life problems. Each one of MapPower's 18 applications can be used to automate department operations and procedures. MapPower's Software allows decision makers to ask what-if questions and to develop multiple scenarios quickly. In minutes, the products can perform data analysis and create reports. More than just a database, MapPower's Software is a decision support system. All of the software can be linked to mapping systems to create a complete Geographic Information System (GIS) solution. Information can be analyzed and queried and sent to the map for graphical display through the unique geocoding procedure. Address matching and thematic map creation through analysis is fully supported. Users can use MapPower to explore data for geographic relationships and to make quick visual analyses. MapPower can provide all the necessary components, including the Applications Software, digital maps and the mapping software.

Map•Factory
Raster-based Geographic Information System (GIS)
Macintosh II or larger; math coprocessor; Hard disk drive; color display capabilities (4, 8, 16 or 24 bit); System 7.0 or later.

Like Map II, Map•Factory is a raster GIS that provides a set of dynamic and efficient tools for capturing, managing and analyzing geographic data. Map•Factory is a significant improvement over Map II in both speed and functionality. Some of the new features include: adaptive data compression; an extensive facility for developing and saving operation scripts; single precision, floating point map data; expanded legend editing capabilities; expanded drawing tools and graphics editing capabilities; improved map display/support 24-bit color; expanded translators selection (BNA files [Atlas Pro, AtlasGIS, ARC/INFO, etc], raw binary files [SPOT, TM, etc.], and USGS DEM files [ALL]); expanded print layout facilities; and an external programming shell for developing user-defined map operations and import modules.

Mountain High Map Frontiers
High-resolution editable map outlines
Macintosh Plus or larger; any desktop publishing, layout or image editor program that accepts TIFF, Aldus FreeHand format or Adobe Illustrator EPS inputs; CD-ROM drive.

Mountain High Map Frontiers is a collection of high-quality editable outline maps. This superb resource of 74 map views covers the world and consists of coastlines and borders that fit the Mountain High Maps relief map images or can be used independently as a self-contained resource. Each map is available in three formats: Adobe Illustrator (EPS), Aldus FreeHand and industry standard TIFF. The Illustrator and FreeHand files are constructed in layers, so that borders and coastlines can be selected together, or individually. Each can be edited for styles, widths and colors, and users can selectively fill countries with colors or patterns or with the appropriate Mountain High Maps relief image. Reproduction rights allow unlimited commercial use.
$120 retail; call for free brochure
Digital Wisdom Inc.; PO Box 2070; Tappahannock, VA 22560; 804-758-0670, 800-800-8560 or 804-758-4512 (fax)

Mountain High Maps
High-resolution TIFF images
Macintosh Plus or larger; any program that accept TIFF input; CD-ROM drive.

Mountain High Maps offers a unique collection of relief maps of the world's continents, countries and ocean floors. This collection, 74 flat projections and 39 global views (more than 1,000 images total), provides detailed and accurate relief views that can be used as a base for an extensive range of applications: artwork and advertising; newspaper and television; publication and presentation; education and reference; multimedia software and video use. Mountain High Maps can be quickly loaded into any desktop design or publishing program and customized to a user's own requirements. The high-resolution images (typically 2,250 by 2,600 pixels) can be used for the very highest quality output and are referenced in an extensive catalog. Reproduction rights granted with the purchase of Mountain High Maps allow almost unlimited commercial use. Mountain High Maps are published as a two-disc CD-ROM set.

Satellite Pro
Satellite tracking software
Macintosh Plus or larger; System 6.0 or later.

Satellite Pro is a comprehensive tracking program. Using parameters available free from NASA, Satellite Pro will show the position, ground track and coverage area of any satellite on a variety of map projections, including rectangular, polar and great circle. In addition, a "View from Space" can be obtained that will show the earth as seen from the satellite. Data such as the latitude, longitude, altitude, azimuth, elevation and range from the observer can be obtained at specified intervals or in a real-time mode, and can be saved to disk for use by other programs or reformatting with word processors. Complete details are furnished for obtaining the free NASA orbital data.

Small Blue Planet: The Real Picture Atlas
Gathers spectacular satellite images and places them interactively in the context of several world maps
Macintosh II or larger; 4 MB of RAM; hard disk drive; 8-bit color; color monitor; CD-ROM drive.

Small Blue Planet is an electronic satellite atlas that gathers spectacular satellite images and places them interactively in the context of several world maps, giving users an intimate view of our planet. It instructs with beauty via pictures of landforms, plate tectonics, volcanology, meteorology, oceanography, glaciation and more. Recently discovered landforms become accessible, which were unknown to humanity until mapped by advanced remote sensing technology. One world map shows the enormous mountain ranges of the ocean floor, discovered by satellite and rendered at NOAA as a stunning bathymetric map. Another world map shows the current political boundaries. Another gives a stunning USGS rendition of the landforms of the United States in gray scale. Other images include the intricate coastline of Greece, in false color scanner images, the mountains of Indonesia from Space Shuttle cameras, poking through the cloud cover and high-altitude views of hundreds of cities of the USA and the world. The Chronosphere, also available on floppy disk, displays the Earth's patterns of day and night at any given time.

Street Atlas USA
Complete road map of the entire country
Macintosh Color Classic or larger; 4 MB of RAM; 2 MB of free hard disk space; color monitor; System 7.0 or later; CD-ROM drive.

Street Atlas USA is a complete road map of the entire country on a single CD-ROM. Users can zoom in on every city, town or rural area in the country — right down to the tiniest backroads. The database gives instant access to more than 12 million street segments and more than 1 million lakes, ponds, rivers, parks, railroads and monuments. The database in Street Atlas USA provides the most current maps available, and includes thousands of streets and developments that didn't exist a few years ago. Users can search for data by place name, Zip code, telephone exchange or street name. Maps feature city and town names; highway, street and road names; railroads; mountains, rivers, lakes and streams; and many prominent buildings and monuments.

Surface III
Modeling and mapping
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Surface III is well suited to modeling and mapping chemical concentrations, rock depths, geophysical properties or any other data that can be described by an X-Y location and a Z value. Data is read from any text file; output can be printed directly or transferred to GIS or other software for further analysis. The X-Y-Z data is modeled through a gridding process. Surface III takes the randomly located X-Y-Z data and creates a matrix of regularly spaced rows and columns representing the data. Several different search methods, weighting functions and gridding methods are available. Grid-to-grid algebra, re-gridding and grid smoothing can also be performed. Grids are displayed as contour maps, color-filled maps or three-dimensional wireframe diagrams. Data point locations can be posted over the other maps. Maps can be saved as PICT, PostScript or printed.
$249 retail; standard version
$399 retail; faulting and kriging version

MaCATI 2.0 — CAPI/DMS Version
Macintosh-assisted personal interviewing and disk-by-mail surveying
Macintosh Classic, LC or larger.

MaCATI CAPI/DMS is a comprehensive survey system for conducting Computer-Assisted Personal Interviewing (CAPI) and Disk-by-Mail Surveys (DMS). It is simple to learn and use and ideal for data collection needs involving political exit polls, door-to-door surveys, kiosk-based mall and in-store intercept surveys, convention research and disk-by-mail surveys of the installed base of Macintosh end users, developers, VARs and dealers. MaCATI automates the process of questionnaire editing, entering skip patterns, data collection and the compiling of results and statistical analysis involving large-scale survey research projects. MaCATI comes with a spelling checker, thesaurus, dictionary, data aggregation software and the Flo•Stat 2 statistical analysis and mapping package. Everything required for large-scale personal interviewing and disk-by-mail survey data collection projects is included in this system.
$1,995 retail; license for up to 20 personal interviewing units and unlimited disk-by-mail surveys
Educational discount available
Senecio Software, Inc.; 525 Ridge St.; Bowling Green, OH 43402; 419-352-4371 or 419-352-4281 (fax)

MaCATI 2.0 — CATI Version
Macintosh-assisted telephone interviewing
Macintosh Classic II, LC or larger.

MaCATI is a full-featured, computer-assisted telephone interviewing package. It consists of three integrated programs: Editor, Fielder and Cleric. It is ideal for market research surveys, political polling and telemarketing. Editor features include: easy entry and editing of the questionnaire; merging of separate questionnaires; creation and storage of often-used response categories in user-created menus; standard demographic, attitudinal and geographic/miscellaneous response categories built into the system; and is capable of handling very complex skip instructions. Other features include: automatically loads telephone samples; maintains call records, appointments and call status reports for entire phone sample; Flo•Stat 2 statistical package accompanies MaCATI; and Flo•Stat outputs SAS and SPSS command files. Fielder features include: automatically loads and dials phone numbers; maintains appointments; interviewers point-and-click on the appropriate response category and the system automatically scrolls to next question; interviewers can scroll backwards to amend selected responses; and date, time, phone number, interviewer's ID and number of minutes to completion are automatically recorded for each interview.

Marketing Plan Toolkit
Provides users with an organized method for creating a marketing plan from strategy to implementation
Macintosh Plus or larger; 1 MB of RAM; Excel 3.0 or later, Lotus 1-2-3 Mac or compatible spreadsheet; System 6.0 or later.

Marketing Plan Toolkit provides an organized methodology for planning and managing the marketing process from strategy to implementation. It includes: information gathering, market focus, marketing tactics, specific programs, sales forecasts and plan vs. actual analysis. Spreadsheet tools automatically generate sales forecasts, link expenses to sales and create charts to enhance presentation. The Marketing Plan Toolkit gives users a way to enhance their creativity by applying Palo Alto Software's Strategy Pyramid, which links high-level strategy through tactics and programs to develop specific implementation. It builds a real link between planning and action.
$149.95 retail
Palo Alto Software; 144 E. 14th Ave.; Eugene, OR 97401; 503-683-6162, 800-229-7526 or 503-683-6250 (fax)

MarketPlace Business
Puts information on more than 8 million U.S. businesses on a user's desktop
Macintosh Plus or larger (Macintosh SE/30 or larger recommended); 4 MB of RAM; 5 MB of hard disk space; System 6.0.7 or later; CD-ROM drive.

MarketPlace Business allows users to create targeted prospect lists and market analyses right on the Macintosh. Users select prospects from a database of more than 8 million U.S. businesses, using such criteria as geographic location, type of business (8-digit SIC Codes), annual sales and number of employees. An innovative software "meter" lets users preview and analyze information on all 8 million records, but allows them to pay only for the records actually used. Lists created with MarketPlace can be output as mailing labels, reports or ASCII files. The business database in MarketPlace is supplied by Dun & Bradstreet Information Services.
$845 retail
MarketPlace Information Corp.; 3 University Office Park; Waltham, MA 02154; 617-894-4100 or 617-894-1656 (fax)

MediaManager
PR management
Macintosh with 68020 or larger processor; 2.5 MB of RAM (4 MB with System 7); 9 MB of free hard disk space; System 6.0.7 or later.

MediaManager enables users to handle mission-critical PR jobs quickly, easily and professionally through targeted media lists, editorial calendar management, contact management, PR task automation and more. Features include: create and save media lists quickly and easily; find unscheduled coverage opportunities and pitch stories; send information to the editors who matter to the user; never miss scheduled story opportunities; find all important editorial calendar story opportunities in minutes; create lists of editorial calendars or product group; get details

on the editor responsible for a specific calendar opportunity with the push of a button; print action reports sorted by issue date, action date, topic or publication; access complete editorial contact information, including direct phone, fax, E-mail, comprehensive beat profile and personal interview; add contacts and organizations; keep personal notes on each contact; manage activities with powerful schedule and task automation functions; produce letters, faxes and mail-merge easily with built-in word processing; print labels in all standard formats to any printer with ease; print action reports in seconds; and more.

MediaMap; 215 First St.; Cambridge, MA 02142; 617-374-9300 or 617-374-9345 (fax)

NewsTracker PR Software
Public relations/publicity program database
Macintosh with 2 MB of RAM; hard disk drive.
NewsTracker is a database tool for public relations firms and corporate communications departments. The program provides a relational database for management of media lists, news clippings, broadcast exposure, billing information, client information and special-event tracking that facilitates successful single projects and/or entire publicity programs. NewsTracker also allows a user to analyze publicity results in a quantitative form, and generates high-quality reports and summaries. Stand-alone and multiuser versions are available.
$495 retail
The Right Brain, Inc.; 4263 Brigadoon Dr.; Shoreview, MN 55126; 612-229-6299 or 414-854-9864 (fax)

PowerTrax V1.25
Contact management system
Macintosh Plus or larger; System 6.0.7 or later.
PowerTrax is a powerful contact management system that maximizes the productivity and efficiency of today's time-conscious professional. With features that include a relational contact database, integrated calendaring, word processing and project/expense reporting, PowerTrax revolutionizes the management of both contacts and schedules. For example, the integrated calendar allows users to build schedules of upcoming events; a history for contacts, companies and projects; and produce an 8.5 by 11-inch monthly calendar with a print out of these scheduled events. Searching, sorting and grouping of any file's records is simplified with a variety of tools that include a search criteria based on user-defined parameters. Developed to meet the needs of both single and networked users, PowerTrax is an ideal contact management tool for marketing and sales professionals. Often used in conjunction with the Macintosh PowerBook, PowerTrax is particularly suitable for traveling professionals. The program is System 7 compatible.
$495 retail; single user (call for multiuser pricing)
Soft Solutions, Inc.; Chamblee Tucker Rd., Bldg. 12, Ste. 200; Atlanta, GA 30341; 404-457-9400 or 404-454-9800 (fax)

ProClass
Prospect closing assistant; prepares home estimate, proposal and purchase agreement
Macintosh with 1 MB of RAM.
ProClass is an interactive sales tool designed to be used by marketing personnel of a builder or development firm. The system allows a prospective buyer and sales agent to "build" a home purchase price, determine the buyer's qualifications and calculate monthly costs and cash requirements. The system contains three databases: a file of loan types, which includes loan rates, loan term, closing costs, mortgage discounts and qualification ratios; a file of basic models, which includes price, estimated taxes, insurance, utilities, association dues and expected appreciation; and a file of model construction options and selling prices. Modules include prospect maintenance, model home maintenance, option maintenance, loan maintenance, model home selection, built home estimate, financial work space, print home estimate and/or purchase agreement.
$395 retail; includes application software and Omnis 3 run-time software
HMS Computer Co.; 5937 Fairwood Dr.; PO Box 1707; Minnetonka, MN 55345; 612-934-2652 or 612-933-9664 (fax)

Prospect Tracking System
Prospect database; sales tool for builders and realtors
Macintosh Plus or larger; external disk drive.
The Prospect Tracking System is an interactive sales tool that provides for tracking prospects through a series of buying decisions until making an actual sale. At the time of data entry, key information is captured to profile prospects, their needs and to establish steps to complete a sale. The system is interfaced to a word processing program to facilitate the preparation of mailings to prospects based on selectable requirements. Management reporting includes the ability to analyze prospects by advertising, prospect grade, buying range and buying interest, whether they currently own or rent, type of current housing, number of bedrooms, specific product interest, district analysis and family type. Management sales reports, phone dialer and importing features are included.
$195 retail; includes application software and Omnis 3 run-time software
HMS Computer Co.; 5937 Fairwood Dr.; PO Box 1707; Minnetonka, MN 55345; 612-934-2652 or 612-933-9664 (fax)

Publics
Audience segmentation software for public relations practitioners
Macintosh with 2 MB of RAM; hard disk drive with at least 1 MB of free disk space.
Publics is a public relations research tool that assists users in writing a customized questionnaire that is suited to telemarketing or direct mail research use, provides a means to input survey responses, then computes demographic statistics and helps analyze the results. Publics gives the PR professional at an agency or in a corporate communications department a valuable tool for evaluating the predilections/tendencies of an intended audience, before a news release has been written, a PR message devised, a campaign planned or a special event created.
$295 retail
The Right Brain, Inc.; 4263 Brigadoon Dr.; Shoreview, MN 55126; 612-229-6299 or 414-854-9864 (fax)

■ **Quick Poll**
Surveying tool
Any Macintosh.
Quick Poll is a complete and innovative surveying tool. It is made of three modules: Questionaire, which permits the creation and modification of multiple questionaires that can be grouped in a survey or used as stand alones; Survey, permits the presentation of multilingual questionaires; and Analyzer, permits compilation of results in real time (while survey is going on) and then answers can be partitioned in groups related. Results can be printed in different formats and exported to any other program.

Sales Navigation
Sales automation program
Macintosh Plus or larger; 4 MB of RAM; System 7.0 or later.
Sales Navigation is a LAN-based, multiuser sales automation program that allows users to implement and automate a strategy-based sales system. The customizable program includes components for targeted database marketing, sales cycle tracking, telemarketing, call center management, closed loop polling and reporting. Users can also incorporate an automated proposal generator; track sales and marketing performance; analyze lead sources, markets and products; and produce extensive management reports. Features include: new systems can be up and running within 90 days; enables users to track and manage multiple buying influences within one deal; and provides integrated communications and polling for pipeline analysis, forecasting and sales analysis.
$30,000 to $60,000 retail
R.M. Dudley Corp.; 1799 Old Bayshore Hwy., Ste. 200; Burlingame, CA 94010; 415-697-1650 or 415-697-1816 (fax)

■ **Survey EZ3**
Create and compile surveys
Macintosh II or larger (68020 processor recommended); 4 MB of RAM (8 MB recommended); 5 MB of free hard disk space; System 7.0 or later; hard disk drive.
Survey EZ3 is designed to make writing, running and reporting on surveys as easy as 1-2-3. Users create a new questionnaire using the survey writer feature as a guide; or select from a library of questions and responses. The questions can be built using any combination of demographic, multiple choice, numeric or open-end questions. Users then enter the survey responses directly into the question screen. Users can set up sophisticated but easy-to-comprehend printed reports or produce brilliant screen presentations simply by selecting from a variety of layout options and choosing the data they want to include.
$795 retail; single user
$1,195 retail; multiuser (licensed for 10 users)

Surveys And Questionnaires
Assists in the construction of questionnaires or marketing surveys
Any Macintosh.
Surveys And Questionnaires is a collection of programs designed to assist in the construction of questionnaires or marketing surveys. When the responses to a survey are available, easy data entry is provided; the question and possible response appear on the screen and the actual response is prompted (ideal for telephone surveys). The response data can be categorized according to multiple criteria. The data can be analyzed in detail, response levels equal, above or below some specified levels can be obtained, correlations between questions and so forth. Finally, the data is put in summary form suitable for the final marketing report. Any size survey can be handled, depending only on available RAM.
$250 retail; includes Marketing Statistics
Lionheart Press, Inc.; PO Box 20756; Mesa, AZ 85277; 602-396-0899, 514-526-7877 or 602-396-0932 (fax)

■ **Tactician Buttons**
Allows the development of custom map-based functions
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.
This easy-to-use scripting capability allows the development of custom map-based functions that are fully integrated with the Tactician product family. Tactician Buttons also provides the capability to access more than 45 commercial database products. Tactician Buttons includes all of the functionality and data provided with Tactician Standard, and adds the Buttons development and customization environment (any Tactician system can run Buttons scripts). It also includes advanced Q+E query capability for Btrieve, dBase, Excel, NetWare SQL, OS/2 DBM, Paradox, SQLBase (Gupta), MDI gateway, SQL server, text files and XDB.
$2,495 retail
Tactician Corp.; 16 Haverhill St.; Andover, MA 01810; 508-475-4475, 800-927-7666 or 508-475-2136 (fax)

■ **Tactician Micro-Marketing Machine**
Retail marketing tools
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.
The Tactician Micro-Marketing Machine is a comprehensive set of retail marketing tools. This package facilitates location and merchandising decisions, helps improve effectiveness of advertising and promotion and is an extremely valuable competitive intelligence tool. It includes all functionality and data of Tactician Buttons, plus retail gravity modeling, resource optimization and regression modeling. It also includes Data Warehouse for building extremely large, high-speed databases that can be accessed via any Tactician system.
$6,995 retail
Tactician Corp.; 16 Haverhill St.; Andover, MA 01810; 508-475-4475, 800-927-7666 or 508-475-2136 (fax)

These Products Available Through Bottom Line Distribution

■ **Tactician PowerMap**
Sales automation, EIS and desktop mapping
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.

Tactician PowerMap delivers value and ease of use for sales automation, EIS and desktop mapping. It includes thematic and point mapping, zoom, pan, layer and overlay control, street mapping and Street Finder (data available separately) and Pin Map. It can be used as a low-cost run-time platform for Tactician Buttons applications. It provides publication-quality map output and database connectivity to midrange and mainframe computers. Included are (U.S. only): US States, Towns, Places and 8,000+ Cities, and an extensive range of color sequences and icons. Customers receive Counties, Highways and Zip Centroids free of charge upon returning the registration card.
$349 retail
Tactician Corp.; 16 Haverhill St.; Andover, MA 01810; 508-475-4475, 800-927-7666 or 508-475-2136 (fax)

■ **Tactician Standard**
Micro-marketing system with retail and sales management functionality
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.

Tactician Standard is a micro-marketing system with retail and sales management functionality. It includes thematic and point mapping, zoom, pan, layer and overlay control, street mapping and Street Finder (data available separately) and Pin Map. It can execute Tactician Buttons scripts. It provides publication-quality map output and database connectivity to midrange and mainframe computers. Tactician Standard adds manual territory redistricting and balancing, retail trade area analysis and interactive 3-D spreadsheet functionality. It includes utilities for address matching and geocoding, building various levels of cartography, as well as cartographic and data import and export. Included are (U.S. only): US State and County Boundaries, US five-digit Zip centroids, 118,000+ Place Names, 8,000+ Cities, US Nationwide Interstate Highways, sample Button scripts and an extensive range of color sequences and icons.
$995 retail
Tactician Corp.; 16 Haverhill St.; Andover, MA 01810; 508-475-4475, 800-927-7666 or 508-475-2136 (fax)

■ **Tactician Targeting Machine**
Marketing
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.

Custom interfaces combined with demographic and business data make the Tactician Targeting Machine the tool of choice for precision marketing. It is available in a range of capabilities with data options. It includes all of the functionality and data of Standard Tactician, plus the UDS Marketbase demographic, business and retail potential data at various levels of geography. It also includes the Micro-Marketing Interface — a complete desktop marketing system featuring Customer Profiling, Area Profiling by Cluster, Area Profiling by Product, Area Profiling by Demographics, Area BPI Rankings, Opportunity Analysis and Most-Like Analysis.

■ **TeleLead**
Telemarketing database system
Macintosh LC III or larger; 8 MB of RAM; System 7.1 or later.

TeleLead is a full-function telemarketing system designed to be used by a one to 50-person telemarketing department. It is written in ACI's 4th Dimension relational database and can be used on a single Macintosh computer or with a high-performance server as a true client/server application. TeleLead is capable of managing thousands of prospects. TeleLead produces reports on individual telemarketer performance, as well as leads generated by sales representatives, states, territories, regions, countries, etc. It maintains complete records of all contacts made, literature sent and requested, lead sources, etc. The system also produces labels for mailing campaigns, individualized letters with a built-in word processor, registers prospects for seminars and produces customized reports as specified by the user that will compare the success of mailings, seminars and other marketing programs.

■ **Tim Berry's Marketing Plan Pro**
Creates professional marketing plans
Macintosh Plus or larger; 4 MB of RAM; System 7.0 or later.

Tim Berry's Marketing Plan Pro is a stand-alone program that creates professional marketing plans. It provides an organized method for planning and managing the entire marketing process, from strategy to implementation. The program is exceptionally easy to use, making it ideal even for novice computer users who must develop highly-effective marketing plans. The program steps users through the entire process of information gathering, market focus, marketing tactics, action programs, sales forecasts and planned vs. actual analysis. Tim Berry's Marketing Plan Pro features a unique way to enhance creativity using Palo Alto Software's Strategy Pyramid, a system that links high-level strategy through tactics and programs. It builds a real link between planning and action so users develop a marketing plan that is truly successful.

Palo Alto Software; 144 E. 14th Ave.; Eugene, OR 97401; 503-683-6162, 800-229-7526 or 503-683-6250 (fax)

Traid-Names
Generates product, service or business names
Macintosh 512K or larger; ImageWriter or LaserWriter.

Traid-Names is designed to help users come up with unique names for products, services or businesses. The program is capable of generating hundreds of possible names from syllables taken from descriptive words. The program provides single screen interactivity. One window provides five scrollable lists; three for the entry and selection of building block syllables, one for the names (or words) that the program creates and one for the names that the user wants to save for final consideration. Each list can be edited and provides instant data "pop up" into any of six starter text cells.

Vertical Markets/ Mathematics

Calculator Construction Set 2.09.6
Application that creates calculators (saved as applications or desk accessories)
Macintosh 512KE or larger.

The Calculator Construction Set allows users to replace the Apple calculator desk accessory with a choice of more than 60 custom alternatives. The many emulations and other popular calculators may also be saved as stand-alone applications. A complete Calculator Construction Set is included, allowing users to create the perfect calculator to suit their needs. Calculator Construction Set contains emulations for HP 12C, HP 16C, TI Business Analyst, HP 38E, TI Business Analyst II and HP 41C. Specific applications include exchange rates, liquid conversions, temperature conversions, architecture, surveying, typesetting, chemistry, programming and more. Creating custom calculators is a snap and no programming is required. Users simply drag the parts they want into the calculator shell from the parts box, or use one of the pre-built templates. The tool box used to design the calculator is similar to working in a painting or drawing program.

Dubl-Click Software, Inc.; 20310 Empire Ave., Ste. A102; Bend, OR 97702; 503-317-0355 or 503-317-0430 (fax)

Cellula V1.04
One-dimensional dynamical system simulation (color or black and white)
Macintosh Plus or larger.

Cellula allows users to generate thousands of different high-resolution cellular automata plots with four user-definable rule sets: Modulo-2 rule, Monte Carlo, Boolean 2-state rules and Additive 3-state rules. High-resolution plots are generated in color for the Macintosh II series and are compatible with the LaserWriter. The program features a user's choice of propagation rules, including probabilities; single seeds or random seeds; online help screens; and a bibliography.

Cluster Analysis
Cluster analysis algorithms, including K-means, divisive and agglomerative techniques, dendrograms and classification
Macintosh 512K or larger.

Cluster Analysis contains a collection of all the major cluster analysis algorithms. Data entry programs allow the entry of data directly or the transfer of data from and to popular spreadsheets. Scaling of metric data is also provided. Cluster analysis programs include procedures based on arbitrary clustering criteria, sums-of-squares of distance criteria, H-means and K-means, criteria involving invariants, W-means, the multiple-location allocation problem, the sum of absolute distance criterion, divisive and agglomerative procedures and some miscellaneous procedures, such as the bond energy criterion technique.

Convert
Metric to imperial conversion calculator
Any Macintosh.

Convert is a desk accessory calculator that allows conversions between metric and imperial units (feet to meters, grams to ounces, etc.). It fully supports all of the standard multiples and submultiples and can deal with linear, square or cubic measures. Convert can be run from the keyboard, keypad or mouse and supports the Clipboard.

Cube & Tess V2.0
Three- and four-dimensional group theory training (color or black and white)
Any Macintosh.

Based on the famous six-colored cube puzzle, Cube is a computer puzzle for training in the mathematical concepts of group theory. A player points and clicks to enter moves. Single moves can be combined into sequences called processes, which can be played back in forward or reverse motion. Tess is a four-dimensional version of Cube, which is a bit more challenging, though understandable. Like Cube, Tess is activated by the mouse and users can record, save and play back their moves. The manual includes a discussion of group theory applied to the puzzle's solution and the action of symmetry operations in three and four dimensions. It includes examples and exercises with solutions.

Data Desk 4.2
Data analysis; statistics; graphics
Macintosh Plus or larger; hard disk drive; uses math coprocessor and/or color if available.

Data Desk is a desktop data analysis environment that helps users combine real-world knowledge with the patterns in their data to visualize abstract concepts and see them applied to real data. It is designed to support the process of analyzing data where a user may not know what is in the data at the start. Among the features of Data Desk are a complete range of statistics and plots; a multidimensional rotating plot (display three or more variables and rotate them freely); plot

brushing (select points in one plot or display and see them highlighted in all other windows immediately); a full integration of graphics and statistics; and HyperView pop-up menus that suggest additional analyses and provide expert advice. Users can also use symbols and color to display additional variables in plots, making it easy to see many dimensions of data at once. Data Desk is a fast statistical package. Even though it is powerful enough for the professional statistician, it can help guide any user through analyzing his or her own data.

Data Description, Inc.; PO Box 4555; Ithaca, NY 14852; 607-257-1000 or 607-257-4146 (fax)

Designer Fractal Series
Mathematics
Macintosh Plus or larger; System 4.2 or later.

FractaSketch allows students and mathematicians to rapidly design, draw and edit fractal shapes of great intricacy. The patterns are entered using a special palette designed to enter a user's own shapes. Profusely illustrated, it is an ideal program to accompany books, such as Mandelbrot's The Fractal Geometry of Nature. The fractal figures are shown with calculated dimensions that can be saved in PostScript or PICT format.

MandelMovie lets users create animations of Mandelbrot and Julia sets. Movies can be made and saved showing a smooth zoom of points of interest. A user's own equations can be entered on Macintosh computers with a math coprocessor. It has adjustable precision and supports color and gray scale. It can be used to make QuickTime movies. The program comes with a detailed HyperCard help guide.

Dynamic Software; PO Box 13991; Berkeley, CA 94701; 510-644-0139

Expressionist 3.14
Equation editor
Macintosh Plus or larger.

Expressionist is an equation editor that generates typeset-quality pictures of mathematical expressions for use in technical word processing. Generated pictures can be pasted into word processors and page-layout programs. Pictures can be copied back to Expressionist for re-editing. The program, which includes both a desk accessory and an application, allows a user to edit an equation by pointing, clicking and typing; equation structures reshape automatically on screen in response to changes. Greek letters and special symbols and structures are available on a palette or through the keyboard. A user can select character strings or subexpressions and enlarge, shrink, cut, paste or enclose them inside any equation structure. A Tweak feature allows a user to drag subexpressions into special alignment for fine tuning. Expressionist comes with the usual structures needed to make equations. Also included are more uncommon structures to make matrices, loop integrals, superscripts over subscripts, vectors, overbars, overstrike characters, diagonal fractions, cube and other roots, etc. Matrix selections allow copying and pasting of rectangular submatrices. Expressionist is System 7 savvy and supports Balloon Help.

Fractals V3.3
Fractal graphics program (color or black and white)
Macintosh Plus or larger.

Fractals is a program that allows the visualization of the Mandelbrot Set by computer graphics. It is an artistic endeavor and a useful tool in examining some mathematical constructs in the field of complex variables. Users can plot the Mandelbrot and Julia sets of simple nonlinear functions or create their own polynomial function. Fractal objects are objects in which smaller elements have a characteristic shape similar to that of the parent object. While nature only exhibits about three levels of fracticality in most cases, the magnification of the boundaries of the Mandelbrot Set can be examined over tens of orders of magnitude, while retaining the characteristic traits of the original.

MacFunction
Multivariate function graphing
Macintosh 512K or larger.

MacFunction is a flexible tool to draw and examine three-dimensional graphs. It is designed to be used as a supplement to a course in multivariable Calculus, as well as by anyone interested in graphing three-dimensional functions. Options include the ability to adjust eye level for viewing graphs; show or remove hidden surfaces; plot partial derivatives; show two dimensional contour plots; adjust grid resolution in the display; change the domain of a function; and more.

Maple V
Symbolic and numeric computation, mathematical programming and scientific visualization
Macintosh Plus or larger; 4 MB memory partition; 20 MB hard disk space; System 6.0.7 or later; hard disk drive.

Maple V Release 3 is a powerful interactive system that provides a complete mathematical environment for both symbolic algebraic expressions and arbitrary-precision numeric arithmetic. It is used worldwide by educators, scientists, engineers, researchers and students to teach, understand and solve both numeric and symbolic mathematical problems. Specific applications include VLSI design, robotics, laser design, brain research, ship hull design, satellite guidance systems and engineering. Maple V is also used in the physical sciences, business management, economics and finance. The newest release, Maple V Release 3, features an easy-to-use worksheet interface including export to Latex, mathematical robustness, interactive graphics and a new help facility featuring keyword searches within help pages. It is built upon industry standards, such as Unix, the X Window System, TCP/IP and PostScript. Maple V has an extensive library of more than 2,500 functions common to many scientific and engineering applications. Its facilities include arithmetic with integers, fractions, unknown variables, polynomials and general expressions; solving equations; factoring; taking derivatives and series expansions of functions; indefinite and definite integration; solving differential equations and recurrence equations; matrix operations; plotting; and much more. Maple V is available across a wide range of computer systems: microcomputers, workstations, mainframe minicomputers and supercomputers.

MathCad 3.1
Advanced mathematics package
Macintosh Plus or larger; 1 MB of RAM.

MathCad for the Macintosh lets users put math, text and graphics together right on their screen. Users simply enter their calculations in real math notation and they're done — the answers in their document. Change a variable and MathCad automatically updates the answers in document. Add a graph and some explanatory text and print results in presentation-quality output. With MathCad 3.1, users will do more math, easier and with greater accuracy. Users don't have to fit their calculations into a spreadsheet or program for hours. MathCad 3.1 makes formulas, notations and graphics follow the way they think.

Mathematica 2.2
Mathematical computation system
Macintosh with 68020 CPU or larger or Power Macintosh; 6 MB of RAM (2 MB of Ram for front end only).

Mathematica is a general system for mathematical computation that can be used both as an interactive calculation tool and as a programming language. Mathematica does numerical, graphical and symbolic calculations. Its numerical capabilities include arbitrary precision arithmetic and matrix manipulation. It can manipulate formulas directly in algebraic form, performing such operations as symbolic equation solving, integration, differentiation and power series expansion. Mathematica can also produce and animate color two- and three-dimensional PostScript graphics. The Mathematica system runs on a range of machines, from personal computers to supercomputers. The Mathematica kernel works the same on all computers. A sophisticated front end for Mathematica on a Macintosh takes advantage of the Macintosh graphical user interface. This front end can be used even when the kernel is running on a remote computer. The front end supports Mathematica "Notebooks" that mix text, graphics, sound and Mathematica input.

Mathematician's Toolkit
Extends the power of the True Basic programming language to include areas of special interest to mathematicians
Macintosh Plus or larger; True Basic Language Version 2.0 or higher.

The Mathematician's Toolkit extends the power of the True Basic programming language to include areas of special interest to mathematicians. It can be used for high-precision arithmetic, complex number arithmetic, extended precision matrix arithmetic and matrices and vectors of complex numbers. A library for compiling and evaluating formulas is also included. Mathematician's Toolkit includes: HUGELIB, for extended precision arithmetic; MATLIB, which uses HUGELIB to extend the precision of matrix operations and includes operations for transpose, matrix inversion and determinants; CMPLXLIB, which provides complex number arithmetic in True Basic and includes arithmetic operations and complex valued functions; CMATLIB, which extends the capabilities of complex number arithmetic to vectors and matrices of complex numbers; and FNLIB, which allows users to compile and evaluate formulas supplied as input while a program is running.

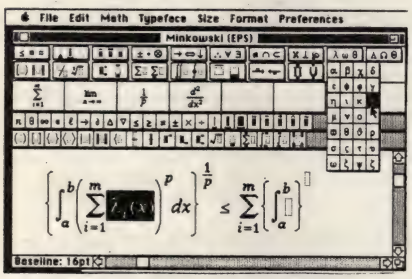
MathType 3.0
Mathematical equations for word processing
Macintosh with 1 MB of RAM; any Apple printer.



MathType is an intelligent mathematical equation editor that allows professors, students, engineers, mathematicians, scientists, statisticians and others to create typeset-quality equations for word processing and desktop publishing documents. MathType has an easy-to-use WYSIWYG display. Equations are created using simple point-and-click techniques; there are no command languages or codes to learn. MathType comes with more than 280 mathematical symbols and templates — everything from long division signs to triple integrals. MathType applies the rules of mathematical typesetting as users type — automatically choosing fonts, style, spacing and position as the equation is entered. Users can then use Object Linking and Embedding (OLE) technology or Cut and Paste commands to incorporate equations into their documents for perfect output every time. A Windows version of MathType is also available. Users of Microsoft Word 5.0 or later qualify for special upgrade pricing. Educational Lab packs and site licenses are available.

MathWriter
Scientific word processing program
Macintosh SE/30 or II family; 2 MB of RAM; hard disk drive.

MathWriter is a complete WYSIWYG scientific word processing program that allows users to enter mathematical expressions as text, not graphics, so that both text and mathematical expressions can be edited in the same document. While MathWriter includes features standard to general word processing programs, such as a spelling checker, thesaurus and automatic hyphenation, the program also automatically sizes and centers mathematical symbols, italicizes variables, formats tables and matrices and shows on-screen renumbering of both equations and references to equations. MathWriter's unique revision tracking allows insertions or deletions while users retain the original version. The changes can then be accepted or rejected, individually or globally.

Matrix Operations
Matrix entry routines, addition, multiplication, transposition, inversion, eigenvalues and eigenfunctions of symmetric and non-symmetric matrices
Macintosh 512K or larger.

Matrix Operations includes matrix entry routines, addition, multiplication, transposition, inversion, eigenvalues and eigenfunctions. More complex routines involve finding the eigenvalues of symmetric and non-symmetric matrices and the Cholesky decomposition of matrices. The solution of sets of similar equations is provided. Also provided are data transfer programs for the moving of files to and from popular spreadsheet programs.

MobileMath, The Newton Math Assistant
Math tool for Newton users
Newton MessagePad; Macintosh Connection Kit.

MobileMath provides Newton users with a math tool that is much more powerful than a calculator. By simply handwriting an equation on a Newton screen, as if writing it on paper, users can get an immediate answer to the equation by highlighting it and tapping the Newton Assist button. Formulas can be saved and used over and over again. Users can create their own equations or take advantage of the more than 80 prewritten formulas that come with MobileMath. MobileMath can solve very advanced math problems, such as annuity schedules and mortgage loan payments, statistical and engineering equations, calculations based on dates and time, as well as simple problems like figuring the tip on a meal. MobileMath is activated by tapping the Assist button, so it is accessed instantly, without having to launch a separate application.

PowerMath II
Symbolic mathematical manipulation program; plots expressions; unlimited number size; for students to scientists
Any Macintosh.

PowerMath II solves problems from the most simple arithmetic to symbolic and polynomial calculus problems. It is designed to be a productivity tool for students, scientists, engineers and numerical analysts. The problems can be expressed on the screen in conventional mathematical terms, and there is no limit to size of numbers, length of variables or the form of an expression. Standard symbolic notation is used throughout. There are a variety of built-in functions including transcendental and logarithmic functions stored on disk. Users may store custom-built functions as well.

Propagator
Neural network development
Macintosh with 68020 or larger processor; 1 MB of free RAM; 2 MB of free disk space; math coprocessor; System 7.0 or later.

Propagator is a neural network development system. It's intuitive graphical interface allows novices and experts alike to train backpropagation networks with little startup time. Neural networks are mathematical models that are able to learn non-linear relationships. They have wide-ranging applications, from financial and economic forecasting to image and speech recognition, signal classification and non-destructive testing. Propagator offers full user control over network parameters, such as learning rate and momentum, and provides three graphs to track training progress and pinpoint problems. It includes the means to add noise to the input set, as well as to train using a validation set. Two productivity tools are included: one that produces C/C++ source code for trained networks and one that scales data according to a user-specified range. Propagator comes with a money-back guarantee and free technical support.

ProType Math
Professional publishing software; typesets mathematical and scientific equations
Macintosh II or larger; A/UX; 8 MB of RAM; 19-inch monochrome or color monitor; SCSI disk controller with 160 MB disk.

ProType Math combines all the typographical and image handling capabilities of ProType with an ability to produce and edit complex mathematical and scientific equations. Fraction bars, underscores, baseline rules and vinculum rules will automatically adjust with the addition or subtraction of characters. A special math spacing value is set at the beginning of a page file. Math spacing saves time by eliminating the need for placing additional space between equations. An operator always maintains complete control over all math defaults, such as point size and set size, which may be changed to fit a particular job. Complex mathematical and scientific equations can be dropped into text blocks easily; the leading automatically adjusts to accommodate multiple line equations. Support of pi characters, including 3 and 5 line math characters, is an important feature whenever setting math. Characters are represented in true width and sizes.

Paragon Publishing Systems; Bedford Springs Office Park; 10 Corporate Dr.; Bedford, NH 03110; 603-471-0077, 800-431-1403 or 603-471-0501 (fax)

Simulink
Dynamic nonlinear systems modeling, analyzing and simulation
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 12 MB of RAM; Matlab.

Simulink is an interactive system for analyzing, modeling and simulating dynamic nonlinear systems. Its graphical, mouse-driven interface and comprehensive block-diagram library make the modeling of linear, nonlinear, continuous-time, discrete-time, multivariable and multirate systems a fast and intuitive process. Customized and new blocks can be easily added to the library, enabling users to create blocks for specialized needs and protect existing investments in C and Fortran models. Simulink models are portable between computer platforms and revision histories are easily maintained for complicated projects and for models shared within a workgroup. Simulink is built on the Matlab numeric computation and visualization system, offering immediate and seamless access to a comprehensive selection of mathematical and engineering tools for further system analysis.

Sum Total
Multipurpose calculator program
Macintosh Plus or larger; uses 270K of RAM; 400K on System disk; MultiFinder or System 7.

Sum Total is a multipurpose calculator program that provides a broad range of features for scientists, engineers, programmers, graphic artists and business users. These features include: instant access via hot key (even while a dialog box is up), data exchange with Apple Events, name indexed memories, user-defined functions and ease of use. Sum Total can be used in either stack-based, algebraic or command line input modes. The interface supports four user settings, each designed for the needs of specific users. The standard setting provides a streamlined display for general use. The color display provides a color editor, dropper, conversions and specific color functions. The programmer setting displays all results in two simultaneous formats selected by a user, as well as providing Boolean math operations. The scientific display provides a spreadsheet-like vector/matrix editor,

complex numbers and a wide assortment of advanced math and statistical functions.

Surface Plotter
Tool for visualizing three-dimensional surfaces
Macintosh 512K or larger; external disk drive.
Surface Plotter provides a visual representation of the mathematical concepts involved in studying functions. Using Surface Plotter, functions can be defined in rectangular, cylindrical or spherical coordinates, or in rectangular parametric form. It generates three-dimensional images of complex surfaces. The images (or plots) may be displayed one at a time, or organized and displayed as a slide show. The slide show can be shown rapidly, animating the images for more realism. Users have control over color, viewpoint, scale, axes, hidden line removal and the number of points calculated in the direction of each independent variable. Each package includes a user guide.

Tech
Scientific and mathematical fonts
Any Macintosh; ImageWriter or LaserWriter.
Tech has six major font families: Tech, Tech+Text, Hi Tech (half superscript), Lo Tech (half subscript), Tech+Text I, Tech-Equation, available in 9, 10, 12, 18, 20, 24, 36 and 48 point. Two other micro height fonts, Fraction bar and Fraction bar+ assist in complex fractions. Each family has more than 1,300 individually designed scientific symbols including the English and Greek alphabets and all of the standard symbols needed for scientific equations in mathematics, engineering, physics, economics, astronomy, chemistry, etc.
LaserTech is comprised of four LaserWriter fonts for math and science equation symbols: Tech Equation, which has the standard equation form of the English alphabet, Tech Text, which has both text and equation symbols and Times based Tech Text and Tech Equation T. More than 20 overstrike keys have automatic non-deleting backspacing and can be typed over any letter in the font (and over letters from other fonts such as Times and Times Italic).

Ternary Plot 3.5
Ternary plotting (triangular diagrams) with text and graphics tools
Macintosh 512K or larger.
Ternary Plot is a graphic plotting application that normalizes and plots three values (including negative values) on a triangular diagram. Diagrams can be saved as MacDraw PICT or transferred via the Clipboard to any draw-type application. Text and graphic elements are MacDraw-like objects and can be edited with a draw-type application. Ternary diagrams can be plotted at three triangle sizes (1.3-, 2.6- and 4.2-inch sides) or any corner can be enlarged to fill the screen. An unlimited number of data sets can be plotted on the same ternary diagram. The maximum size of any single data set is limited only by available memory (files with more than 2,000 points can be plotted on a 1 MB Mac). Data can be entered in a ternary plot in four ways: text files, Clipboard, keyboard and interactively by clicking the mouse in the triangular area. All data is error checked. A diagram title and apex labels can be added or changed at any time. All text can use subscripts and superscripts. Eleven plot symbols plus sample numbers, tie lines and line segments can be plotted in eight colors. The same data set can be plotted with symbols, numbers and tie lines to produce a plot of numbered symbols connected by lines. An apex factors option allows values for any corner to be multiplied by a factor before normalization. Drawing tools consist of lines, circles, ovals, rectangles, triangles, hexagons and a free-hand pencil. Legends can be easily created with symbols and text from the Legend option. Additional text can be placed anywhere on the diagram. Tick marks and grid lines can be specified from a dialog box. Version 3.5.7 is System 7 compatible.

Theorist 1.53
Symbolic algebra and graphing program
Macintosh Plus or larger; 1 MB of RAM.
Theorist is a WYSIWYG symbolic algebra and graphing program that makes mathematics easy and more productive. It lets users manipulate equations more easily and accurately than by hand. Theorist is interactive; users see the equations and manipulate them on screen with the mouse. There is no complex programming language to learn. Math capabilities include: symbolic and numeric integration and differentiation; matrix and linear algebra; real and complex trigonometry and hyperbolic functions; complex arithmetic and algebra; Chebyshev, Legendre and Taylor series; spherical harmonics; matrix powers, inversions, adjoints and determinants; and symbolic polynomial expansion, collection and factoring. Graphing capabilities include: polar, linear, semi-log, parametric, density and contour plots; rectangular, cylindrical and spherical coordinates; multiple line and surface plots; animation; and save as PICT, EPS and PICS files. Theorist is System 7 savvy and supports Balloon Help.

Vertical Markets/Non-Profit Agencies

The Associateur V5.0
Membership management
Macintosh IIsi or larger; hard disk drive; 4th Dimension 3.0 Runtime; LaserWriter.
The Associateur is a multiuser database designed for organizations requiring control of their membership. It provides a built-in mail merge, various mailing label formats, conference labels, business classifications, committee management, event activity, invoicing, statements, accounts receivables with 30-/60-/90-day balances, export to general ledger, export for publishing, adhoc searches, sorts and reporting, as well as many fixed reports including dues forecast displayed/printed in one of four graph types. Each member (company) is assigned from one to many representatives. Representatives are responsible for dues, correspondence, invoices, voting and more. They are assigned to committees with no limitations to their participation. The program allows up to five pages of comments to be entered for members, representatives and committees. A Deferred Revenue option is available for an additional fee.

DonorPerfect
Fund raising software
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; printer.
DonorPerfect is designed to meet the specialized needs of non-profit fund-raising organizations. The system maintains donor and prospect records, processes pledges and gifts, automates mailings and lists and provides unlimited summary and statistical reporting. DonorPerfect's flexible data screens are installed with a custom interface, tailored to each user's specifications. Relational Query By Example (RQBE) makes sophisticated queries simple and fast. The ongoing support and services program includes setup and installation, data transfer from other systems, hot-line telephone support, remote diagnostics (via modem), quarterly newsletters, onsite or special training sessions and regional user meetings. Comprehensive documentation and online help are provided. Annual updates and enhancements are released at no charge to support clients.

DonorWorks
Fund-raising package
Macintosh Plus or larger; System 6.0.7 or later.
DonorWorks is a robust fund-raising package that will track potential and actual donors, subset them into many different groups for intelligent reporting, record gifts, print receipts (four different ways) and then allow users to search their giving history based on what they are looking for. Some of its many features include a flexible pledge system that can accommodate almost any need, built-in word processor with mail-merge fields, tickler file for to-do tasks, export of data, passwords, alumni directory, renewal system for membership organizations, honor roll, major donor tracking, cross reference donors two different ways, CASS certification, user-definable fields and a point of sale module. StarSoft offers a full line of support and training services, and they can import a user's current data. DonorWorks runs on the Macintosh and Windows, and soon on the PowerPC (and perhaps OS/2, NT Windows and Motif), all on a mixed network.

FundWorks
Integrated fund raising
Macintosh Plus or larger; 2.5 MB of RAM; hard disk drive; System 6.0 or later.
FundWorks offers Macintosh users a robust fund raising system designed to handle all the needs of a multifaceted fund development, featuring the easy-to-use graphical interface made famous by Apple Computers. From donor profiling, gift and pledge management, all the way through capital campaign tracking and major donor cultivation, FundWorks has it all and much more. Its built-in word processor enables users to generate letters and envelopes without ever leaving the program. And, because it is written in a powerful database language, users can access the entire database for targeted fund raising solicitations.

GiftMaker 3.1b
Fund-raising, membership and mail list management software for new or small non-profit organizations
Macintosh Plus or larger (LC or larger recommended); hard disk drive; laser printer (recommended) or ImageWriter.
GiftMaker is designed and priced with a new or small non-profit in mind. It enables an organization to automate all of the basic functions associated with fund-raising, including create personalized mailings; mailing labels; donation and pledge processing; thank-you and reminder letters; gift reporting; membership tracking; ad hoc report generator; store detailed information on each donor/prospect, including unlimited notes; and much more. Services provided include Macintosh hardware sales and recommendations; support and training; data conversion; and network design and implementation.

GiftMaker Pro 5.0
Advanced fund-raising, membership and mail list management software for non-profit organizations
Macintosh Plus or larger (LC or larger recommended); hard disk drive; laser printer (recommended) or ImageWriter.
GiftMaker Pro brings a new level of functionality and ease of use to a development office. This powerful fund-raising, membership and mail list management software is designed for fund-raising professionals who need detailed information at their fingertips. GiftMaker Pro provides the information users need to become

successful while automating the manually intensive tasks associated with fund-raising. And most importantly, GiftMaker Pro delivers the three essential benefits users expect from a fund-raising system: improved data integrity and accuracy; increased office productivity; and more personalized correspondence in all aspects of fund-raising. Features include: detailed information on each donor/prospect, including biographical information, unlimited addresses, affiliations, unlimited notes, summary and detailed gift history; complete gift processing, including pledge scheduling; generates all acknowledgement and reminder letters; summary and detailed gift reporting; complete membership management; advanced ad hoc report generator; multilevel security; mailing labels; donor profiles; and much more. Services provided include Macintosh hardware sales and recommendations; support and training; data conversion; and network design and implementation.

MacSys Grant Manager
Research administration database system
Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive.

The MacSys Grant Manager is a 4th Dimension-based client/server research administration database system. Originally designed for a national medical research funding organization, this system is designed to match research funding applications to appropriate reviewers. Given the large demand for research funding, selecting the most appropriate projects is critical to maximizing investment value. This system determines matches between funding proposals and any number of reviewers in order of their qualification to evaluate the given proposal. This assures that the funding request is evaluated by the most qualified individuals. The matching algorithm can be based on any number of keywords assigned to both the reviewer and the funding application. This system is designed to be easy to use even for disciplines in which the terminology is highly complex. It can be easily configured to other "matching type" applications. It is customizable as required.
$25,000 U.S. retail; single user (4D Server compatible)

MacTrac 4.0
Professional fund raising software
Macintosh Plus or larger; hard disk drive; System 6.0 or later.

MacTrac gives non-profit fund raisers the kind of powerful tools they'll need for modern-day fund raising. Using MacTrac, fund raisers can easily enter donors and gifts into a fast, powerful and fully relational Microsoft FoxBase database. They can print pledge reminders, gift acknowledgements, membership renewal notices, mailing labels, personalized letters and more than 30 standard and customized reports. MacTrac features enhanced batch gift entry, Zip code reports, automatic reports, elimination of duplicate names and linked records. New optional modules include: Grant and Major Donor Tracking, Networking Capability, Volunteer Tracking and an interface to Peachtree Accounting for Macintosh software. MacTrac comes with a 400-page manual, 90 days of free telephone support, a 60-day money-back guarantee and a quarterly newsletter.

MapPower's Community Development Management System
Helps manage the administrative and financial tasks of an agency
Macintosh II family; 16 MB of RAM; 80 MB hard disk drive; 13-inch color monitor.

MapPower's Community Development Management System has been developed as a decision support system to help solve the problems encountered in managing Community Development agencies. It can be used to automate departmental operations and procedures. Community Development includes both Block Grant and Rehabilitation Areas. In minutes the program can perform data analysis and create reports that may take hours with existing manual methods. Information about all of a user's Programs and Projects is entered into one datafile, eliminating the redundant effort and errors created by constantly re-entering information on forms and reports. All current application forms and reporting forms are generated automatically. The built-in Calendar and Action Tracking System insure that crucial Program and Project dates will always be visible and scheduled correctly. MapPower offers a revolutionary system to manage an agency's applications, programs, activities, projects, contracts, bids, loans and financial reporting.
$8,995 retail

ProFile
Professional fund raising administration/accounting
Macintosh Classic or larger; hard disk drive; printer.

ProFile allows a professional fund raiser to instantly access donor information in virtually any combination of biographical and/or geographical donor detail. Gifts are recorded by donor, honored or memorialized individual, gift type, source or event and application fund. Analysis of gifts can be generated for any classification for any period of time desired by a user. ProFile monitors pledge activity. Cash receipts based on current pledges can be forecast to assist in planning expenses. The program includes batching controls to assist a user in verifying the dollar amounts entered. There is no need to sort pledge payments from other types of gift entries or to sort by account, type, etc. The program was designed to be used in conjunction with Microsoft Word for the generation of personalized direct mail.

Vertical Markets/Oil & Gas

Argus MeshMaker Pro 2.0
General purpose finite element and finite difference pre-processor for numerical modeling, including Geographic Information System and an on-screen digitizer
Macintosh with a math coprocessor; 8 MB of RAM; hard disk drive; System 6.0.4 or later.

Argus MeshMaker Pro is designed for and used by engineers and scientists using finite element and/or finite difference numerical models to model ground water flow, petroleum reservoirs, oceanographic, coastal and marine systems, mineral mining and surface flow. The auto mesh generator and auto grid generator allow for intuitive and easy creation of complex meshes and grids. Elements, nodes and blocks are editable objects using click and drag techniques. Material properties, boundary and initial conditions, topography, etc., can be digitized on screen or imported from DXF files into information layers. The GIS automatically assigns each element, node and block its appropriate value in each of the information layers. Additional capabilities include querying, zooming intuitive mesh and grid density setting, support of bitmap and PICT formats, and export templates allowing export to any numerical model.
$1,000 retail; free demo available

Fluid Calc
Computes fluid parameters
Macintosh 512K or larger.

Fluid Calc computes properties for gas, oil and water based on commonly used correlations. The equations and references used for calculations are provided in the program's documentation. Fluid Calc lets a user perform particular calculations, such as "z factor," or all properties for a particular fluid, such as all gas properties. Property calculations include z factors, densities, compressibilities, viscosities, formation volume factors, m(p) functions, bubble point pressures, GORs and GWRs. Different correlations are also available for an additional fee.

Log Interpret!
Well log interpretation
Macintosh Plus or larger.

Log Interpret! is a well log interpretation program. It computes reservoir properties, such as shale volume, porosity and water saturation by different techniques. The program allows users to quickly enter needed parameters and compare techniques. Results are displayed in tables and graphs. Log Interpret! includes most standard open-hole logging calculations, including shale, borehole and gas corrections. The program provides several cross-plots with lithology overlays to aid users in determining the type of lithology. It also includes a general graphing option where users can completely specify depth-log graphs. These graphs can combine data and results or related information, such as core data. Graphics can be displayed or printed. Data files used in Log Interpret! are ASCII files with a column format.
$450 retail
The Logic Group; PO Box 50499; Austin, TX 78763; 512-451-5707 or 512-451-2300 (fax)

MacDigi
Well log digitizing
Macintosh Plus or larger; hard disk drive; digitizing tablet.

MacDigi provides an interface between a Macintosh computer and a digitizing tablet to let a user quickly and simply trace well log curves. A user specifies which curve to digitize and the log scale, then traces the curves in a continuous fashion. Portions of a curve can be redigitized if errors occur. On and off scales can be toggled as needed, and either linear or logarithmic scales can be chosen. Data is processed according to a user-specified increment (e.g., 0.5 feet), and created output files are column ASCII files that are easily imported into other programs. The digitizing tablet can be connected to the computer through the serial or ADB port.
$500 retail
The Logic Group; PO Box 50499; Austin, TX 78763; 512-451-5707 or 512-451-2300 (fax)

MacLog
Wireline log evaluation application
Macintosh with Color QuickDraw; System 6.0.4 or later.

Wireline logs measure subsurface rock characteristics, such as resistivity and bulk density in oil, gas and water wells. MacLog processes the subsurface log measurements and transforms them into values of porosity, lithology, water, gas and oil saturation. This helps geologists locate oil and gas-bearing zones within the rocks. MacLog can use other data (in ASCII from two to 18 columns), such as core, geochemical analysis, drill rate, methane, ethane, etc., that can be plotted and cross-plotted with wireline log data. Histograms of logs and other data are available. Interactive point, click and drag Sw line, Rwa and m are available with Hingle and Pickett plots. MacLog graphics plots can be saved as PICT and paint files. Log curves and computed lithology from 1, 2, 3, 4 and 5 mineral models may be saved as individual objects and pasted into other applications to make geologic fence diagrams and well to

well correlations. MacLog data and answers may be saved as space and tab-delimited ASCII files for export to other applications. Data input is available in several ways: MacLog Digitizer with tablets and drivers that support Apple's Absolute Pointing Device Memory Structure, MacLog LIS Read, keyboard entry with values read from the logs, Wiltshire Geological Services ASCII files downloaded from logging company tapes and word processor and spreadsheet files saved in ASCII. Symbols for DST, perforations and lithology may be added to evaluation graphics.
$4,000 retail
Bowler Petrophysics, Inc.; 243 E. 19th Ave., Ste. 204; Denver, CO 80203; 303-860-1641 (phone/fax)

MacLog Create
Applies functions, operators, curve fits, simple programming and writes new user-defined curves for use in MacLog
Macintosh with Color QuickDraw; System 6.0.4 or later.

Users can generate their own curves, which may be used in MacLog for determination of porosity, Vclay, Sw and Sxo. Other curves may be generated and displayed. Users may also generate synthetic transform curves, which have use in other wells with minimal logs. Operators available include: ^, *, imod, idiv, /, +, - and =. Functions are: abs, sqr, sqrt, sin, asin, cos, acos, tan, atan, exp, ln, log, sinh, invsinh, cosh, invcosh, tanh, invtanh, inv, trunc and round. Least squares curve fits are: linear, log, ln, power, exponential, parabolic and polynomial 2-4 terms. Radius of curvature TVD log curves may be generated from ASCII survey data. Simple programming may be used to generate user-defined porosity, Sw, Vclay and other curves. Users may remove sections of rock, such as igneous intrusives in up to 72 zones to generate better log sections. VclayDN may be curve fit to VclayGR and a new clay curve may be generated for use in bad hole or gas bearing zones.
$500 retail
Bowler Petrophysics, Inc.; 243 E. 19th Ave., Ste. 204; Denver, CO 80203; 303-860-1641 (phone/fax)

MacLog Digitizer
Digitizes wireline logs with tablets that support Apple's Absolute Pointing Device Memory Structure
Macintosh SE or larger; System 6.0.4 or later.

MacLog Digitizer digitizes hard copy wireline logs, core, mudlog and other data with tablets that support Apple's Absolute Pointing Device Memory Structure. MacLog Digitizer has been tested on Kurta IS/ADB, CalComp Drawing Board II and Summagraphics SummaSketch II tablets. The resulting 4-byte real number files are used as input to the MacLog wireline log evaluation application. Output may also be saved as space- and tab-delimited ASCII files for export to other applications. MacLog Digitizer remembers the curve scales from the last digitizing session after the Macintosh is shut down. Users may select a control curve to view along with each curve immediately after digitizing. This helps in curve depth control. Users may also redigitize starting anywhere on the tablet immediately after digitizing if they wish to do so.
$500 retail
Bowler Petrophysics, Inc.; 243 E. 19th Ave., Ste. 204; Denver, CO 80203; 303-860-1641 (phone/fax)

MacLog LIS Read
Decodes wireline log digital data
Macintosh SE or larger; System 6.0.4 or later.

MacLog LIS Read decodes wireline log digital data that is written in the Log Information Standard (LIS) format. LIS data on floppy disk is available from major wireline service companies and can be delivered in the field or at computer centers. MacLog LIS Read will read data in LIS format and transform it into 4-byte real number files for input to the MacLog wireline log evaluation application. This means that users do not need to digitize or enter data by keyboard when LIS and other data is available on floppy. MacLog LIS Read will also read Atlas BIT, LIS.TIF, PC.DAT, ASCII.DAT, QC Data LGMOUT ASCII, Energy System ANSI ASCII, LogScan ASCII, Canadian Well Logging Society LAS ASCII, Deep Sea Drilling LIS, Rocha ASCII and raw ASCII files. Any of the resulting 4-byte real number files may be converted to a SEG-Y file to be imported by Macintosh seismic modeling software. Any or all of the curves may be included in the SEG-Y file. The SEG-Y file may also be written to an ASCII file that can be opened by a word processor and inspected.
$2,500 retail

Oil Well Blowout
Relief well proposal program
Macintosh 512K or larger.

Oil Well Blowout is a relief well proposal program that calculates a path that will be parallel to the blowing well where it is intersected. Proposal may be re-drawn at the site using MWD or other survey data.
$4,000 retail
Houston Directional Software; PO Box 2081; Ogunquit, ME 03907; 207-646-6233 or 800-835-0213

Oil Well Directional Package
Oil well planning and drilling
Any Macintosh.

The Oil Well Directional Package is comprised of two programs: Survey Calculation and Proposal. The Survey Calculation Program calculates and prints directional well surveys. The Proposal Program plans simple and complex directional wells, including multiple targets, three-dimensional plans from non-vertical kickoff, correction runs and relief wells. The Complete Directional Well Package includes page size to 36-inch plots, collision avoidance, analysis of uncertainty and three-dimensional views.
$2,500 retail; Survey Calculation Program
$4,000 retail; Proposal Program
$12,000 retail; Complete Directional Well Package
Houston Directional Software; PO Box 2081; Ogunquit, ME 03907; 207-646-6233 or 800-835-0213

Oil Well Screen Plot
Scaled plan and section views of well paths
Any Macintosh.

Oil Well Screen Plot is designed to display separately scaled plan and section views of one or two well paths on a Macintosh screen. The views are initially scaled to show the complete path, but the scale and centering may be adjusted by a user. The screen plot is available from within the HDS proposal program so that a proposed path may be viewed, or as a stand-alone program.
$2,000 retail
Houston Directional Software; PO Box 2081; Ogunquit, ME 03907; 207-646-6233 or 800-835-0213

Seismic Processing Workshop
Seismic data processing system
Macintosh II, Centris, Quadra family or Power Macintosh; 8 MB of RAM; System 7.0 or later.

Seismic Processing Workshop (SPW) is a high-performance, 2-D and 3-D interactive seismic data processing software package for the Macintosh and the Power Mac platforms. SPW possesses a unique flowchart-style graphical user interface, creating graphical data processing controls that are easy to learn and use. A full complement of batch and interactive seismic processing tools make up the SPW Processing Library. There are more than 50 interactive seismic data processing and analysis tools for refining and optimizing seismic data, as well as more than 100 batch processing procedures in the complete SPW package. From DMO to deconvolution, data input to final migration, SPW incorporates a wide ranging collection of batch processing steps to meet most every processing need and demand. Delivering truly outstanding price/performance, multiprocessing, multi-threading functionalities have been woven into SPW, allowing exploitation of multiple, low-cost, plug-in CPUs for high data throughput. In addition, a variety of standard hardware peripherals are supported for data input/output and printing/plotting. SPW systems can be configured as stand-alone seismic data processing systems or integrated into a networked environment to seamlessly link to other geological and geophysical software packages for multitasking and data transfer.

SPW Drafting Package
Seismic data for drafting
Macintosh II, Centris, Quadra family or Power Macintosh; 8 MB of RAM; System 7.0 or later.

The SPW Drafting package allows seismic data input (SEG-Y), data manipulation and output of high-resolution (up to 600 dpi) PICT images of seismic data for incorporation into displays, montages and reports. In addition, merging of seismic data sets, horizon flattening, time or phase shift corrections, filtering, gaining and a variety of other functions are included in this SPW product, allowing easy manipulation, control and output of high-resolution displays. It provides users with easy-to-use tools for quickly generating high-resolution seismic PICT images for direct output or incorporation into high-quality presentation graphics that can practically sell themselves.

Parallel Geoscience Corp.; 4807 Spicewood Springs Rd., Bldg. 2; Austin, TX 78759; 512-346-4040 or 512-346-0088 (fax)

SPW FieldPower Package
Seismic data processing
Macintosh II, Centris, Quadra family or Power Macintosh; 8 MB of RAM; System 7.0 or later.

The SPW FieldPower package possesses complete field QC and seismic data processing capabilities, delivering high-end workstation performance at low-cost PC prices. A full suite of seismic data acquisition instrument tests are combined with the complete SPW software package to create this high-performance field portable QC and seismic data processing solution.
Call for pricing
Parallel Geoscience Corp.; 4807 Spicewood Springs Rd., Bldg. 2; Austin, TX 78759; 512-346-4040 or 512-346-0088 (fax)

SPW Tape I/O Package
Interactive seismic data input/output and tape copy package
Macintosh II, Centris, Quadra family or Power Macintosh; 8 MB of RAM; System 7.0 or later.

The SPW Tape I/O package is an economically priced interactive seismic data input/output and tape copy package. All standard SEG formats are supported, as well as SEG-2, Bison and Abein formats. Users create tape copies using simple push button controls, choosing either tape-to-disk-to-tape or tape-to-tape method. SPW's graphical flowchart-style interface and easy-to-use pull-down menu selections combine to give users simple controls for all operations. On-screen data display for quality control, on-screen filtering and gain applications, trace and record analysis tools and much more has been incorporated into this SPW product. An assortment of hardware I/O peripherals are supported, including 9-track Exabyte, DAT and 3480 tapes, as well as network transfers.
Call for pricing
Parallel Geoscience Corp.; 4807 Spicewood Springs Rd., Bldg. 2; Austin, TX 78759; 512-346-4040 or 512-346-0088 (fax)

ATS-Pro
Applicant tracking system
Macintosh with System 7 or later; 8 MB of RAM.

ATS-Pro is a comprehensive applicant tracking system available as a stand-alone program or as a module in the HRIS-Pro employee tracking system. ATS-Pro is designed to manage applicant data, job requisitions, applicant interviews and automatically generate all applicant correspondence. It allows search for applicant or requisition data based on user-defined criteria; generates interview schedules and documents all contact with applicants; generates unlimited reports and statistics; tracks job openings and publishes job postings; and monitors and analyzes applicant flow, recruiting costs and sources. A single initial data screen allows for rapid input. The powerful, easy-to-use report writer creates standard and custom presentation-quality, informational, analytical and what-if reports within minutes. Utilities/features include customization tools, multilevel security, SQL, data validation, context-sensitive help and full online documentation. ATS-Pro for the Macintosh is cross-platform compatible with ATS-Pro for DOS and Windows.

Division Officer's Notebook
Helps junior Naval and Coast Guard Officers keep track of people working for them within their division
Macintosh Plus or larger; HyperCard 1.2.5; System 6.0.2 or later.

Division Officer's Notebook (DON) is a database management system designed to help junior Naval and Coast Guard Officers keep track of the people working for them within their division. There are three versions of DON: DON 1.5.5 for the Macintosh (MacDON); DON 1.0.1 for Windows 3.0 (WinDON); and DON 1.1 for DOS (DOSDON). All three versions have the same areas for entering information, allow users to navigate around the program in the same manner and in general behave in the same way. The six categories that are included are: Important Dates, Advancement, Personal Data, Professional Data, Education Data and Rate Info. The program is written by former US Navy Officers and is based on their experience in the fleet. Government contracts are welcome.

Employee Handbook Toolkit
Includes a complete professional draft of an employee handbook
Macintosh 512K or larger; word processor.

From company mission statements to the specifics of compensation and benefits, the employee manual is the textbook reference for a business. The Employee Handbook Toolkit includes a complete professional draft of more than 40 pages formatted to work with any leading word processor. It covers the latest issues, plus more than 45 policies and 22 benefits in draft form, with valuable commentary on why and what to include and modify. The Employee Handbook Toolkit covers the bases for employers, including standard items and the difficult new issues, such as: drug testing, harassment in the workplace, alternative work weeks, cafeteria plans, child care leave, model safety program, Americans with Disabilities Act and non-disclosure and termination agreement. Along with the proposed draft and commentary, an implementation guide is included that explains how to schedule meetings, agendas, etc., to implement policies and benefits with employees.

■ **EmployeeManualMaker**
Human resources project management
Macintosh Plus or larger; System 6.0.7 or later; hard disk drive recommended.

EmployeeManualMaker consists of 110+ policies and 30+ benefits already organized, defined and written. To create a customized employee handbook, users edit directly on screen using a word processor. Topics covered range from employment policies, standards of conduct and compensation and performance policies, to benefits programs for vacations, holidays and leaves of absence, health coverage and retirement plans. Other policies cover education, safety and security and union activity. Expert's comments within each section explain issues and make suggestions. More than 100 pages are already typed and formatted into word processing files. An Employer's Survival Guide includes 11 sample forms and memos, including an employment application, an offer letter, an orientation checklist and a performance review. Pertinent articles address current issues, such as drug testing and harrassment.

HRIS-Pro
Employee tracking and benefits administration system
Macintosh with System 7 or later; 8 MB of RAM.

HRIS-Pro is a comprehensive employee tracking and benefits administration system to which additional modules and features can be added to fit an organization's needs and style. The Employee Tracking System tracks personal, job, compensation and EEO data, as well as unlimited employment history, safety/OSHA incidents and qualifications (skills, education, training). The Benefits Administration System manages employee insurance and retirement benefits, including flexible benefits/spending accounts and COBRA administration. Fully-integrated modules/features include payroll interface, organizational charting, time off tracking, corporate roll-up routine, position control/succession planning, applicant and requisition tracking. (The latter is also available as a stand-alone product, ATS-Pro). The powerful report writer creates standard and custom presentation-quality informational, analytical and what-if reports within minutes with user control over font selection and placement of text, graphics and calculations. Utilities/features include customization tools, SQL, multilevel security, data validation and context-sensitive help. HRIS-Pro for the Macintosh is cross-platform compatible with HRIS-Pro for DOS and Windows.

Human Resource Solutions
Personnel management
Macintosh Plus or larger; 4 MB of RAM.

Human Resource Solutions is a comprehensive personnel management system that tracks detailed employee information and generates management reports for all phases of the working environment. The Employee Status File includes all general information on an employee. Entry layout screens track information on vacation time, absenteeism, LOA, disciplinary actions, terminations and grievances. The Applicant File tracks information obtained from the employee application and pre-employment interview. The Job Tracking area accumulates and reports all actions related to an employee and the current job, as well as previous positions. The Safety area provides for the prevention of job-related accidents and the accurate reporting of accidents that have occurred. The Benefits area aids employers in tracking and summarizing dollars spent on employees and their dependents.

MacSys Trainer
Personnel training tracking system
Macintosh SE or larger; 4 MB of RAM; 40 MB hard disk drive.

The MacSys Trainer is a 4th Dimension-based client/server training tracking system designed to provide monitoring and control of personnel training in both internal and external training programs. The system can be used simultaneously by both human resource and training departments. The MacSys Trainer tracks employment and training histories of personnel. It allows for monitoring of training participation by division/department, including participation rates within courses/programs. The MacSys Trainer is an invaluable tool to track individual progress over time, using indicators such as advancement and salary. The MacSys Trainer can be used to register and manage conferences, including an online registration feature. Other built-in features include travel and accommodation management, as well as mailing sorts for direct mailing. Form generation includes course entry forms, participant application forms and participation evaluation forms. This system can be integrated into many existing personnel databases, including Oracle databases, and is customizable as required.

Salary Magic V2.0
Salary negotiations/office management
Macintosh Plus or larger.

Salary Magic is a salary negotiations and office management package. The program uses a tightly integrated spreadsheet and database for calculating, recording and printing virtually any information that might be needed at the negotiation table. Salaries, fringe benefit packages, changes or completely new schedules can be generated using dollars, percentages or both. A user can define limits on experience, change any cell or add cells at will. Any change in information is automatically added and totals recalculated in the database. Schedules may be constructed using Scattergram information. The schedules can also be compared using the Comparison option. The Comparison report shows both the dollar and percentage difference of summaries. Other proposal or industry guidelines can also be generated. On the negotiation management side, the program is designed to turn any recorded data into useful records. Personnel information can be recorded and printed. Useful reports, such as RIF lists, personnel data and fringe benefits, can also be generated and printed.

MacPhoto WorkStation
Software for wedding and portrait studios
Macintosh Plus or larger; external 800K disk drive or hard disk drive; ImageWriter.

The MacPhoto WorkStation provides a system for automating a wedding and portrait studio. It allows users to enter print orders directly from the data a client gives after reviewing the proofs of a photographed event. It will automatically keep track of how many prints are required for package specials, as well as using proofs that were not purchased. After print orders have been captured, the program will compute the number of prints required from each negative and will produce labels that can be attached to negative glassiness for submittal to a color lab. After a user has finished capturing and verifying a print order, the program will generate client billing information directly from the print orders.

StockView
Stock photography captioning and management
Macintosh Plus or larger; Panorama II or Panorama Direct.

StockView provides a complete cataloguing and captioning system for photography files. It maintains and updates extensive information and cross references about photos, their subject matter, format, where they are, when they're due back and how they have been used. File sizes are limited only by available disk space. StockView provides on-screen displays of one or several sizes of caption labels, displaying how the caption will fit the label as it's written. Labels are selected by clicking a button that resembles the appropriate label. Numerous labels, suitable for any Macintosh-compatible printer, are provided that can be altered slightly or completely overhauled. Several user-defined defaults, numbering systems and search modes are provided. StockView includes optional use of code 39 bar code, and digitized image storage optionally links to InView or InContact. All printed reports are fully customizable by a user. Photographic image organization
Macintosh Classic or larger; 2 MB of RAM (4 MB with System 7); System 6.0.4 or later.

SuperLabel is an organizational program for cataloging and filing collections of photographic images. Each picture is assigned a subject code and a filing location. Title information is then entered into a database through which searches can be run. Four different size title labels and/or copyright labels and a page file label can be printed. Up-to-date subject lists are also maintained. SuperLabel supports the ImageWriter II, LaserWriter, StyleWriter or any true 100 percent-compatible type printer.

Vertical Markets/Publishing

Ad Maker
Classified ad production
Macintosh Plus or larger; Aldus PageMaker 5.0.

Ad Maker is an integrated solution for classified ad production. It combines the power of a 4th Dimension database and Aldus PageMaker to streamline classified ad production. Ad Maker gives ad producers greater control over the entire production process. Operators enter ads into the database, exactly as they are to be printed. The cost is then calculated and a rate card produced by Ad Maker's database, which takes into account special formats like line screening, bold face, capitals, graphics or logos.

Ad Management Database
Client-server SQL database to manage display advertising information and display ads for pagination
Macintosh II or larger client; Sun Sparcstation Server.

The Ad Management Database manages the flow of information for newspaper advertising, from ad order entry through production and composition to pagination. The Ad Management Database implements Sybase SQL Server technology and uses Macintosh computers with DT's AdSpeed as database clients. Display ads can be ordered, tracked and produced, while the Ad Management Database keeps track of the data flow, record locking, run date and scheduling information, category, status, priority, sales rep, color information, ad size, pagination information and file structure of each display ad.
$5,000 and up retail; based on circulation and terminals

AdForce 1.5
Automated ad dummying system
Macintosh Classic or larger (Quadra family recommended); hard disk drive; LaserWriter; System 7.0 or later.

AdForce provides a quick and easy ad dummying process for small newspapers and magazines. Users can import ad lists from any business system or enter ads directly into the application. AdForce can also accept direct imports with file paths from Baseview's Display Manager and Multi-Ad Service's CAMS ad entry systems. AdForce will stack ads in a flash, then print layouts and runsheets or use the QuarkXTension or PageMaker Addition to instantly create ad dummies in a layout document. Training is not required. Data entry information includes: names, depth, width, colors, section, coupons, request pages and sections, on page, on section, zones, products, markets, ad numbers, file names, notes, comments, pick-up dates and customer names. Custom fields are available from the developer.

AdWorks/2
Ad composition and page makeup
Macintosh SE or II, including Portable; 4 to 8 MB of RAM; 30 MB hard disk drive; two-page large format monitor.

AdWorks/2 is ad creation/production software that includes full general publishing capabilities, essential to creative services and ad production departments. It offers comprehensive text editing, formatting, graphics manipulation and composition features, yet maintains a simple user interface. AdWorks/2 interfaces to Triple-I's composing room Ad Makeup System (AMS), including Triple-I's ad workflow management tools, or provides final ad production for small- and mid-size newspapers. It contains a full complement of professional publishing tools to electronically access, align, scale, condense, expand, manipulate and assemble graphics, halftones and text objects required for composing camera-ready, black and white and four-color display advertisements, in-house ads, brochures and flyers. Features include: multiple formatting functions, global spell checker, point sizes from 4 to 900, full leading control, hyphenation dictionary, automatic paragraphs and indents, custom grids/rulers, capability to embed/create commands for exporting text into AdWorks/2 and the capability to accept EPS, TIFF, PICT or PICT2 graphics.

Catalog Maker
Quark XTension that allows users to complete catalogs quickly by updating prices, pictures and body copy in page layouts
Macintosh Plus or larger; QuarkXPress.

Catalog Maker provides flexibility by creating electronic links between a user's QuarkXPress page and external image, text and data files. It is ideal for users who track large numbers of prices and images, or have documents that undergo many revisions or last-minute changes. Users can create a custom catalog with short notice, produce different regional catalogs and update prices at the last moment. Catalog Maker is a powerful production tool that gives users a competitive advantage.

CatBase
Catalog and directory publishing database
Macintosh SE or larger; 2 MB of RAM; hard disk drive; System 6.0.3 or later.

CatBase is a database publishing application designed for publishing catalogs, directories and similar types of data. It provides a complete database management system in which a user specifies how the publication will be formatted. Any number of different formats can be produced. At publication time, the data is transferred from the database to a template designed in a page-layout program (QuarkXPress, PageMaker and Microsoft Word are supported), where the text is automatically formatted in the specified fonts, styles, sizes, colors, etc. Automatic drawing and filling of anchored picture boxes is available with QuarkXPress. In addition to data from the database, other items, such as user-specified text, punctuation, formulas and calculations, can be included in the publication. A fully functional demo is available.

Class & More
Classified ad management system for newspapers
Macintosh Plus or larger; hard disk drive.

Class & More is a classified ad management system. It allows for sorting classifieds and simplifies the billing procedure. To combine simplicity and ease of use, Class & More contains features that are not necessarily concerned with classified advertising. Publishers struggling to convert to the Zip + 4 that the Post Office demands will find the Mailing List very handy and easy to use. If users have a Cheshire or similar addressing machine available, the Mailing List will produce what they need, and will do renewal notices as well. Class & More includes a manifest or run sheet that will constantly calculate the number of inches and the dollar value of the next paper. And, when the paper is put to bed, this information can be transferred into the Accounts Receivable file for billing, without having to rekey each entry. The Accounts Receivable file produces professional-looking bills on a LaserWriter printer. Also featured is a spreadsheet that will give users a month-by-month profit and loss statement that breaks out each category of income and expense, and can graphically compare one with another to distinguish strong areas from areas that need work. There's also a handy file called Addition that will effortlessly add up long columns of figures.

ClassSpeed 3.1 With ClassSpeed Pagination
Classified ad sales, telemarketing and scheduling classified ads for full-page pagination
Macintosh II or larger.

ClassSpeed helps newspaper classified ad sales representatives control classified ad information, from ad entry by telephone sales or walk-ins through full-page pagination, including display ads. ClassSpeed is fully integrated with the Classified Ad Database for generating issue, classification, pagination and lineage reports, and includes a custom report generator. All classified ads can be ordered, tracked, scheduled and edited, while the Classified Ad Database keeps track of all ad information. ClassSpeed Pagination flows line ads on the page with column and ad rule separations and headings, if desired. Display ads are also placed by classification with the line ads by classification, pre-sold preferred position or by space availability.

Crossword Publisher
Creates crossword puzzles with ease
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later.

Crossword Publisher enables constructors to produce professional puzzles. Crossword Publisher's Puzzle Editor supports entry of clues and grids (three to 25 squares on a side), including renumbering clues as black squares change. Optionally, the Puzzle Editor adds and deletes black squares, guaranteeing a symmetric puzzle at all times. The Rules Checker finds frequent construction errors like using an answer in a clue, reusing answers, asymmetric grids, unacceptable words and using too many black squares or too few answers. Crossword Publisher contains a 200,000-word lexicon. Features include: a Word Lister that generates words for a spot; a Corner Filler that generates ways to fill arbitrary grids with interlocking words; Tight-Spot Finder that identifies hard-to-fill spots; and can export Encapsulated Postscript files which can be imported into PageMaker or QuarkXpress for precision layout.

Franklin Estimator For Macintosh
Estimating system for printers
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.5 or later.

Franklin Estimator for Macintosh is a stand-alone estimating system for commercial and quick printers. It incorporates the dependable Franklin rates and the Macintosh's power, sophistication and ease of use, allowing users to competitively price complex printing jobs with confidence, speed and accuracy. The installed Franklin rates are ready to use. An estimate can be produced, saved and printed as soon as the software is installed. The Franklin rates are national selling rates. The veteran estimator can easily adjust these rates to the local market, or even install their own "shop" or in-plant rates. Additional, miscellaneous and outside charges can be added to the estimate to produce a complete itemized estimate, as well as a quote to present to a customer and a job ticket to send to the shop. The Franklin Estimator for Macintosh will handle estimates requiring multiple quantities, numerous ink configurations with up to eight inks per side, booklets and bindery. The estimate and customer information can be exported to various accounting and electronic spreadsheet programs that allow importing of data. Franklin Estimator is System 7 compatible.

■ **Freedom Series Edit**
Text editor
Macintosh II or larger; 8 MB of RAM; System 7.0 or later.

Freedom Series Edit is a text editor that addresses the specific needs of reporters and writers. It works directly with the Freedom Series Pagination Program to enhance the productivity of content — or design — driven newspapers. The program provides support for embedded notes, an H&J option for viewing QuarkXPress line-endings, QuarkXPress style sheet compatibility, an automatic save feature to safeguard files, selected text copyfit and support for multiple file elements, including headlines, bylines, captions and subheads. Additional features include a spell checker, bounding tools to bracket selected text and continual word and line count. The program includes the Freedom Series Sentinel application to save and retrieve data from a relational database. The send and open commands move or retrieve editor documents from work areas on the database. Stories can be previewed without opening. Story information can be user defined and stored with the story in the work area.

■ **HyperManuscript**
Multimedia publishing and study
Macintosh with 68030 processor or larger; 2 MB of RAM; hard disk drive.

HyperManuscript offers all the features required to publish, research and author original work on disk with the power of interactive computer technology. Users get instant access to any part of the text and can create an unlimited number of annotations, context listings, glossary entries, research notes and projects, each with independently associated bookmarks. Users can also display external documents, show films, add sound recordings, view full-color images and import and export text. The program is unique in simplicity, power and productivity, and is supported by a host of tools and features. The BookBuilder Toolkit provides users with full authoring capabilities and features for controlling every aspect of the book presentation and structure, from adjusting the pagination and chapter titles, to importing additional pages and replacing old material. If copyright is an issue, the original work can be protected against unauthorized alteration without sacrificing any of the features and benefits available.

ImageSpeed Graphics Database
Image management
Macintosh II or larger; QuickTime extension.

Most image management programs address only one of the three areas DT viewed as critical in pre-press production applications: presentation of cataloged images for ease of use in production and composing functions; control of large files for storage and archival purposes; and management of low- and high-resolution images used for OPI substitution during raster image processing and imaging documents containing images from the database. DT designed ImageSpeed and the Graphics Database to address these three critical functions: ImageSpeed client software is used for the presentation of cataloged images for ease of use in production and composing functions; SQL-Server from Sybase Inc. and Spectre-Logic's Alexandria software are responsible for controlling large image files for short-term database storage and long-term online and offline archiving; and Sybase and DT's SpeedDriver program manage low- and high-resolution images used for OPI style substitution at the PostScript RIP.

MacSys Pricedex Pro
Part/price list database system
Server requires Macintosh SE/30 or larger; 8 MB of RAM; 80 MB hard disk drive. Client requires Macintosh SE or larger; 4 MB of RAM; 40 MB hard disk drive.

The MacSys Pricedex Pro is a 4th Dimension-based client/server part list database and catalog/price list generation system best suited for firms with large numbers of part/product listings. This system is designed to maintain detailed listings of parts and products, as well as to assign relationships between the two. Data entry can include any number of part/product descriptions and pricing. The key feature to this system is the user-configured output. The "catalogs" generated include such features as two-sided printing and variable fonts and formats within each part/product listing. Catalogs can be easily designed for specific clients requiring different part/product listings, pricing tiers and languages. A 600-page catalog can be printed in less than four hours using a standard laser printer. The MacSys Pricedex Pro is customizable as required.

Multi-Ad Creator 3.6
Display ad layout
Macintosh Classic or larger; 4 MB of RAM; System 6.0.3 or later; PostScript printer.

The latest version of Multi-Ad Creator enhances its display advertisement design and production capabilities with improved color, masking capability and printing support. Creator now provides improved EPS spot color support, a default colors list, as well as the addition of NAA-Colors support. Masking is improved with the inclusion of status and report features and a bitmap mask option. The most current version now features an even smoother interface between Creator and Multi-Ad Search. Creator offers additional graphic compatibility with JPEG and GIF images. Other features include rotation and editing of graphics and text, style models for repeated text formatting, copyfitting, kerning, multiple special text effects, 76 built-in PICT borders, advanced drawing capabilities, gradient fills and a custom font menu. Creator also supports OPI (Open PrePress Interface), Claris XTND system and PPD printing files.

Mycro-Comp Freedom Series
Front-end system solution
Macintosh II or larger.

The Mycro-Comp Freedom Series is an open architecture system providing editorial, imaging, classified, page dummying and wire applications. Superior implementation of WYSIWYG and GUI (graphical user interface) software, integrated pagination and full color support throughout the system are primary advantages of this state-of-the-art technology. Macintosh computers can be used as input workstations or database servers. The Freedom Series Wire module provides local storage for backup recovery of wire files, customization by users via tables and wire notification criteria per wire based on key words and categories. The Freedom Series ROP Ad Layout program dummies ads according to priority, size and color, and plans a variety of layouts, such as pyramids stacked to the right, left, inside or outside of pages. Freedom Series Pagination improves the speed of layout and design for editorial and classified sections. Both programs are XTensions to QuarkXPress. Freedom Series Edit and Freedom Series Classified complete the total system solution.

Mycro-Comp Freedom Series Classified
Advertising program designed to handle the needs of newspapers
Macintosh II or larger (68040 processor recommended; 8 MB of RAM.

Mycro-Comp Freedom Series Classified is a comprehensive advertising program designed to handle the needs of newspapers. The program supports multiple calendars, publications, major headers and minor headers and boasts a WYSIWYG text editor. Automatic ad pricing based on a variety of rate tables and options make promotional rates and rate changes easy to implement. The program's extensive search capabilities, based on a form field or combination of fields, simplifies retrieving ads from the Freedom Series relational database. Other key features are: security measures to define access to fields and functions, an automated TF utility program, billing capabilities and a display ad data entry form. Sorted galleys are output with QuarkXPress or, by using Mycro-Comp Freedom Series Classified Layout and Pagination, the galleys can be fully paginated front-to-back or back-to-front.
$1,695 retail
Freedom System Integrators Inc.; 405 S. Holland; Wichita, KS 67209; 316-722-8100 or 316-722-8708 (fax)

Mycro-Comp Freedom Series Classified Layout And Pagination
Builds classified advertising pages
Macintosh II or larger; 12 MB of RAM; color display; QuarkXPress 3.2 or later.

Utilizing QuarkXPress along with the Freedom Series relational database, Mycro-Comp Freedom Series Classified Layout and Pagination positions classified display ads, including color ads, on the page within their proper classification categories. The layout of classified advertising display ads includes the automatic insertion of headers above the ads. The sorted galleys are imported and can be paginated front-to-back or back-to-front. Optional automatic repeat of either major or minor headers across the columns means pages are completed rapidly without time-consuming user intervention. Classified lineage can be easily justified and squared off to fit the page and allow other material to share either the front or back page. An update item feature imports low-resolution display ad images onto the page for final output.
$4,895 retail
Freedom System Integrators Inc.; 405 S. Holland; Wichita, KS 67209; 316-722-8100 or 316-722-8708 (fax)

Mycro-Comp Freedom Series Editorial Pagination
Simplifies the building of complete news pages
Macintosh II or larger; 12 MB of RAM; QuarkXPress 3.2 or later.

Mycro-Comp Freedom Series Editorial Pagination, an XTension to QuarkXPress, simplifies building complete news pages. The program tracks and formats jumped stories to maintain design integrity and to ensure that all jump text is placed in the publication. Total integration with the Freedom Series relational database means the Freedom Series Editorial Pagination program can determine if stories have been altered after import and automatically update them with the latest version. Other key features include "feather" to make stories fit the space allocated to them by adding leading between user-selected lines, paragraphs or both; the ability to square off and align text containers automatically; and automatically import ads. The program includes the full-featured search capabilities of the Mycro-Comp Freedom Series Sentinel application for retrieving the correct story quickly from any work queue on the database, including raw wire copy.
$1,550 retail
Freedom System Integrators Inc.; 405 S. Holland; Wichita, KS 67209; 316-722-8100 or 316-722-8708 (fax)

Mycro-Comp Freedom Series ROP Ad Layout
Creates electronic page dummies
Macintosh II or larger; 12 MB of RAM; color display; QuarkXPress 3.2 or later.

The Mycro-Comp Freedom Series ROP Ad layout program creates electronic page dummies for use by Mycro-Comp Freedom Series Editorial Pagination or QuarkXPress. Space for the ads is reserved as defined by style specifications for each page. The program dummies ads based on color, priority, size and other information and plans a variety of layouts, such as: pyramid inside, pyramid outside, pyramid all ads to the right side of the page, pyramid all ads to the left side of the page. Additionally, a stack option allows the ads to be placed from the bottom or tops of the page in either a horizontal or vertical fashion. The operator can designate that each ad is bordered by news on the top, side or top and inside. Ad news ratio is assigned per section or page.

Mycro-Comp Page 3.1
XTension to QuarkXPress to improve layout and design speed for editorial pages and classified sections
Macintosh II; 8 MB of RAM; QuarkXPress 3.2 or later.

Mycro-Comp Page, an XTension to QuarkXPress, improves the speed of layout and design for editorial pages and classified sections. Menu selections provide users with the capability to automatically insert formatted jump text while maintaining a list of unresolved jumps; merge page contents from one document into another; autoscale graphics containers to fit the graphic; and feather text for baseline alignment. Front-to-back or back-to-front classified pagination prevents ads from breaking between columns. Auto-headers are automatically inserted at the tops of columns. Pagination copy originates from Mac-based word processing programs or the Mycro-Comp front-end system. The program is also available in editorial or classified versions. The program can use page dummy layouts created by Mycro-Comp Freedom Series ROP Ad Layout.

Page Director Ad Layout System 1.5
Automated advertising dummying program
Macintosh Classic or larger (Macintosh Quadra family recommended); 1 MB of RAM (2 MB recommended); hard disk drive; System 7.0 or later; LaserWriter.

Part of the Page Director Series, ALS is an automated advertising dummying program capable of taking in multiple, differentiated inputs, assembling — at high speed — advertising dummies based on a rich set of user-definable rules and providing as outputs standard advertising reports; clear, annotated hard-copy advertising dummies at differing resolutions; and a standard file capable of being read directly by Page Director Editorial Layout System and/or QuarkXPress.

ALS with Forms Manager controls the insertion and/or stacking of printing signatures and folios for magazines and newspapers. It also has a cost control and deadline alert function warning users that it is time to move the signature.

Page Director Classified Layout System 1.6
Classified element pagination
Macintosh Classic or larger; 2 MB of RAM (4 MB recommended).

Page Director's publications management features have been augmented to include a classified element pagination engine that can import, gather, measure, sort, flow, square and justify classified line ads, as well as inline displays in a publication. With full support of front-to-back and back-to-front flow, Page Director can paginate a full classified section in seconds, automatically flowing the liners around display ads with the option of inserting filler ads where necessary. Once the pages are completed, any position changes to the flowed ads can be made and the pages can be squared to meet editorial or filler ad leveling requirements. Finally, using Page Director's XTension for QuarkXPress, the classified pages can be automatically built as an issue, page range or individual pages in XPress for output.
$4,995 retail; starting price

Page Director Editorial Layout System 1.6
Publications management
Macintosh Classic or larger; 2 MB of RAM (4 MB recommended).

Page Director is a comprehensive publications management system that gathers, measures, assembles and tracks all publication elements and pages from assignment to composition. Users have full control of copy style, graphics, ads, heads, cutlines, jumps, credits, folios and user-defined elements, including the capability to apply text, graphics styles, colors and attributes individually or for an entire class of elements. Page Director manages and places standing elements, pages and issues; locates and applies color configurations; produces five standard reports; prints superior layouts; and provides stand-alone filters to measure copy and graphics. When completed, an issue can be exported to QuarkXPress for pagination, or comprehensive layouts can be printed.
$1,995 retail

PageSpeed 3.1
Page layout and editing software with database integration
Macintosh II or larger.

PageSpeed quickly produces newspaper pages, including four-color process and spot color separation with ink trapping, line art and halftones and other graphics, blended tints, special effect and curved type headlines, rotation, colorization and intelligent group duplication and modification. PageSpeed includes a powerful text editing environment with a spelling dictionary and thesaurus and full integration to DT's Editorial System. Text editing features include programmable function keys, command key equivalents for menu and toolbox functions and tag characters for imbedded type commands. Text handling and layout features include snap-to, snap-to-fit, item and group attributes and automatic alignment tools. PageSpeed also accepts information from many front-end editorial systems for back-end pagination.

Paper Inventory For Publishers
Software to manage paper inventory
Macintosh Plus or larger; 2 MB of RAM.

Paper Inventory for Publishers (PIP) is for production managers, print buyers and others who are involved with using and tracking paper they own and is stored at other locations. PIP is software developed specifically for managing publishers' paper inventory. If users buy $500,000 or more of paper per year and retain ownership of the paper while it is stored at the printers' locations, they can benefit from PIP. PIP will vastly improve paper purchasing, allocation, tracking and inventory reconciliation. The time users save will quickly pay for PIP, and they also benefit from reduced computational errors and better information about their inventory so that they can safely reduce their inventory levels.

PS-ACT
Adobe Photoshop plug-in module that enables users to maintain, edit or create caption data
Macintosh II or larger; Adobe Photoshop 2.1 or later; System 7.0 or later.

PS-ACT is an Adobe Photoshop plug-in module (with Acquire, Filter and Export aspects) that enables users to maintain, edit or create caption data in the ANPA/IPTC (American NewsPaper Association/International Press Telecommunications Council) format with TIFF or JPEG files. Acquire Plug-Ins include PS-ACT TIFF Acquire and PS-ACT JPEG Acquire. PS-ACT will detect and store ANPA/IPTC formatted captions within TIFF files exported from the AP-Leaf Picture Desk or AXS images on PressLink. PS-ACT also enables users to create a new caption for a TIFF or JPEG file. The Filter Plug-In includes PS-ACT Add/Edit Caption. Users summon the PS-ACT Add/Edit Window from the "Other" item in Photoshop's Filter menu and edits or adds caption data here. Export Plug-Ins include PS-ACT TIFF Export, PS-ACT JPEG Export and PS-ACT Proofer. The captions, keywords, Thumbnail and Preview images that can be found in TIFF or JPEG files exported via PS-ACT's file export modules are immediately recognizable by Leaf and AXS archiving systems, as well as such applications as Aldus Fetch and Apple's new agent software, AppleSearch. PS-ACT prints an image and its associated caption data in one of four formats: Vertical, Horizontal, Legal and Vertical Scrapbook, to any "chooseable" gray-scale printer. Although color is not yet officially supported, excellent results have been obtained with Canon's CLC-500 and the 3M Rainbow Printer.

Q-Edit
Editorial system for both newspaper and magazine publishers
Macintosh LC or larger; 4 MB of RAM; QuarkXPress.

Q-Edit is a powerful and flexible editorial system ideally suited to both newspaper and magazine publishers. Access to the stories on the system is controlled via the System Manager Program, which allocates editorial functions by the type of user (e.g., reporter, copy taster, sub-editor, etc.). The stories themselves are held in baskets (folders), which may be defined, for example, by specific publication. The system can be configured to meet exact user requirements, such as for data storage, copy routing and output to any PostScript-compatible device. It contains all standard editorial functions with full-page makeup using a design-led or text-led approach. The system comprises three main elements: The Editor, for use by reporters; The System Manager Application, for such tasks as purging stories and editing structures; and The XTension, providing the link between Q-Edit and QuarkXPress for page layout and composition.

■ **Scitex CataLogic**
Catalog database publishing system
Macintosh II or larger; 8 MB of RAM; 24-bit color monitor.

Scitex CataLogic is a catalog publishing system. Scitex CataLogic was developed to create a streamlined-database catalog system that will allow users to incorporate last-minute changes, increase copy/price accuracy and meet critical deadlines with shorter lead times. Using client-server architecture allows catalog publishers to link all page elements to a central database with images archived and readily available on a Macintosh or Risc 6000 file server (Scitex Ripro Server). The file server can be connected to production servers, allowing quick transfers of FPO (for position only) PSImages and final pages. Using this workflow, designers can build pages as the production team scans final images and performs color corrections and retouching. Implementing Scitex PSImage and Scitex APR technology into the design phase enables production teams to quickly process PostScript files and output film.
Call for pricing; may vary with configurations

Scitex America Corp.; 8 Oak Park Dr.; Bedford, MA 01730; 617-275-5150 or 617-275-3430 (fax)

SpeedPlanner
Planning and tracking tool for advertising and editorial material with database integration
Macintosh II or larger.

SpeedPlanner is used to dummy advertising content for magazines and newspapers and create ad stacks according to rules defined by press run, section or page by page. Color ads are placed on color pages and preventing back-to-back coupon placement can be activated. Editorial material is also planned by story module, including headlines, graphics and photos. Page dummy templates may be imported into all Macintosh page-layout programs or printed to a LaserWriter as a page makeup guide. When SpeedPlanner templates are used with DT's PageSpeed, all layout information is electronically passed for automated pagination. SpeedPlanner tracks completed ads and editorial material by story module and assembles page elements for unattended and automated full-color, full-page pagination. Pages may be sent to film, paper or plate-ready PostScript output devices, including four process color separated pages.
$4,995 retail
Digital Technology International; 500 West 1200 South; Orem, UT 84058; 801-226-2984 or 801-226-8438 (fax)

SpeedWriter
Reporting and editing software with database and library function integration
Macintosh Classic or larger.

SpeedWriter is a code-free text editing environment for newspaper reporters and editors. SpeedWriter's multiwindow editing allows online database searches and library queries to be displayed in up to 20 separate windows at once. Programmable function keys, keyboard shortcuts, intelligent editing keys, spelling dictionary, thesaurus, dictionary and rule-based hyphenation, discretionary hyphenation, continuous word count and galley depth measurements, backup and fault-tolerant file protection options and close-fit copy editing are some of the features that make SpeedWriter an effective tool for writers and editors. SpeedWriter has full integration with the DT Editorial Database to help manage copy flow and pagination.

Subscriptions & Subscribers 2.0
Subscription fulfillment and circulation management
Macintosh LC II or larger.

Subscriptions & Subscribers, Version 2.0 features improved graphics and printing. Designed for small to medium newspapers and magazines (1 to 20,000 subscribers), handles a variety of subscription periods. It generates Cheshire labels, and a selection of other label types; prints renewal notices and invoices on custom forms or plain paper; and allows statistics and reports to be customized in a variety of ways. Custom searching and sorting of subscribers is easily handled. The system reports on the pro-rated portion of the subscription that may be used by the magazine or newspaper. Program customization is available. Ninety days of free software support is provided.

T-CALS
Allows users to create documents in formats required for delivery to the government
Any Macintosh.

T-CALS allows a Macintosh to create documents in MIL-STD 1840B format on nine-track tape for delivery to the government. Using T-CALS, it is possible to assemble a complete Macintosh-based system that creates technical publications and product data (engineering drawings) for delivery in the formats required by government contracts. T-CALS works with all standard Macintosh applications that generate CALS-compliant files in any CALS-standard format, including SGML, CGM, IGES and Group 4 fax. T-CALS is highly automated and easy to use. After a user identifies the files that comprise the deliverable, T-CALS takes over. Once a user has entered a few pieces of information identifying the deliverable and its destination, T-CALS converts each file into CALS format and writes it to tape. It also accepts graphics as PICT files and automatically converts it for CALS delivery.
$9,550 retail; includes nine-track tape drive, all necessary cables and T-CALS software
$1,000 retail; annual maintenance
GSC Associates, Inc.; 13254 Jefferson Ave.; Hawthorne, CA 90250; 310-675-2093 or 310-675-2159 (fax)

Team Publisher
Enterprise-wide automation solution for magazine publishers
Macintosh with 8 MB of RAM; hard disk drive.

Team Publisher delivers an enterprise-wide automation solution for magazine publishers, linking the sales, production and accounting departments into a multiuser, client-server environment. Team Publisher manages a customer/prospect database, insertion order entry, ad tracking, billing and literature fulfillment. It features a state-of-the-art Sales Force Automation module, including a visual calendar. The Production module features a WYSIWYG classified ad management system and exports classifieds and Index of Advertisers directly into QuarkXPress and Aldus PageMaker. It also allows publishers to process reader service cards in-house. The Accounting module can be used to generate invoices, enter payments and produce statements, reports, etc. The entire package is seamlessly integrated and includes word processing. Fully-integrated spreadsheet and graphing are also available.
$1,495 retail
ZCo Corporation; PO Box 3720; Nashua, NH 03061; 603-888-7200 or 603-888-8452 (fax)

ThumbPrint Master
Reduces the time and effort of generating printing impositions
Macintosh Plus or larger; System 6.0.4 or later.

ThumbPrint Master dramatically reduces the time and effort of generating printing impositions. In a matter of minutes, users enter data about the document and it's layout — no matter how many pages in the original document. ThumbPrint Master then generates pagination sheets, suitable for customer proofing, and signature impositions. ThumbPrint Master calculates and places blank pages and allows for adjustable page numbering, title pages and more. It supports common page/sheet size combinations and popular bindery systems. The program is System 7 compatible.
$799 retail; volume discounts available
Ambassador Software; 2190 Bristolwood Ln.; San Jose, CA 95132; 408-945-5772 or 408-946-4946 (fax)

Vertical Markets/Real Estate

Agent Pro
Real estate sales and marketing software
Macintosh Plus or larger; 4 MB of RAM.

Agent Pro is designed specially for real estate agents to put them in control of their day, never letting an important contingency slip by. It keeps track of clients and listings from day one. It allows for MLS connection, planned mail outs, tracking of listings/closings and much more. Agent Pro uses the friendly Macintosh and Windows interface. Most importantly, it's easy to use. Its clear, easy-to-read screens let users move throughout the program without classroom training or spending valuable time reading a manual. Other features available are: autodialer, word processor, appointment scheduling, CMAs and photo images in records and income and expense tracking. Agent Pro comes with a 60-day money-back guarantee.
$495 retail; free demo disk available

AgentsTools
Loan amortization, payoff, qualifying and property/inflation calculating software
Macintosh Plus or larger; System 6.0.7 or later.

AgentsTools is a stand-alone program that, after entering principal, interest rate and length of loan, calculates monthly payments instantly. An "Overpayment" field allows users to pay more than the required payment and illustrates savings in interest and length of loan in the amortization tables and the bar graph. The "Pay-Off" section calculates and shows the loan balance, cumulative interest paid and cumulative principal paid for any point in time during the loan life. The "Qualifier" calculates what loan amount buyers can qualify for based on their gross monthly income and their debt service. The "Home Value in 'x' Years" calculates the value of a property based on the number of years a property is held, the assumed rate of inflation and the original purchase price. A DOS and Windows version is also available.

Commercial Leasing Edge
Manages detailed information on tenants and commercial buildings, brokers and space availability with a tickle card control system, status reports and electronic Rolodex
Macintosh LC or larger; hard disk drive; printer; backup system is recommended.

Commercial Leasing Edge is a comprehensive package that manages detailed information on tenants and commercial buildings, brokers and space availability. It was specifically written to fully automate the research and data processing activities of the independent leasing broker, leasing agency or a building owner's leasing/marketing staff. The building database includes detailed building profiles with the capability to search and sort by expiration dates, square footage, rates, expenses, location, available space and more. The tenant database includes detailed tenant profiles with multiple locations per tenant, and generates prospect tickle cards. An active client status report tracks multiple clients through the various stages involved in new lease negotiations, renewals or expansions. The broker database includes broker company profiles with agent listings, assigned building lists, form letters and labels. An electronic Rolodex is available for quick search of phone numbers and other contact information. In addition, there are single key connections to word processing, drafting and spreadsheet programs. An optional custom reporting module enables a user to search, sort and extract multiple variables on any information set within the database to generate highly focused reports in a variety of user-defined formats.

Commercial/Industrial Real Estate Applications V3.0
Project cost, expense analysis for new development
Macintosh Plus or larger; 1 MB of RAM; Microsoft Excel.

Commercial/Industrial Real Estate Applications is a spreadsheet model for commercial real estate developers that can be used to produce pro forma budgets. It's intended to produce reports that demonstrate the viability of proposed projects and support for developers' requests for financing. All program data is entered into an Assumptions screen. From this information the program produces a four-page report. The first page states general information about a project and its financing. The second page summarizes architectural and engineering information, land, development and lease-up. The third page details construction and site costs, and recaps the total project cost. The fourth page presents a projected income-and-expense statement for the first full year of operation after lease-up. This page also includes estimated resale, with cap-rate calculation. A developer may specify the lender's debt coverage ratio, and the model provides the maximum loan a project will support. Similarly, a user may specify a required rate of return, and the program estimates gross rental income needed.

Comparative Lease Analysis
Economic analysis of competing real estate lease proposals
Macintosh Classic or larger; Microsoft Excel.

Comparative Lease Analysis is a sophisticated Excel model that allows users to evaluate up to six competing lease proposals. These proposals can represent different spaces or different negotiating positions in regard to a single lease. With each proposal, users can take into account base rent; CPI escalations; pass-throughs for electricity, taxes and other expenses; expense stops and tenant's percentage over the stops; parking expense; build-out cost and allowance; free rent; moving cost and allowance; and other concessions. With just a few minutes of data entry, users will produce presentation-quality detailed and summary reports that show the true cost of each lease proposal, in actual and discounted dollars and by rentable and usable square foot. The program is designed not only to benefit leasing brokers, but also for commercial landlords and tenants, who can use it to evaluate offers and counter-offers in negotiation.

The Complete Property Manager
Property management
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; dot matrix printer.

The Complete Property Manager is designed to facilitate the accounting needs of all property managers. Due to the ease, simplicity and comprehensiveness of the accounting programs, the system can be used by the two or 2,000 unit manager without difficulty. Additionally, the system is designed to handle not only multiple unit apartment complexes, but also single family dwellings and commercial properties. Integrated with the Property Manger is a complete Accounts Payable and General Ledger system. In Accounts Payable, batch entry and automatic calculation of invoices due for payment or discounts simplify the task of tracking monies owed. Multiple checking accounts and check reconciliation gives management the ability to make daily review of cash flow. The aging report allows for analysis of future cash needs. Printed checks are mail-ready with detailed stubs attached. Manual checks provide for the one-time or out-of-process checks that need to be written and recorded. The General Ledger is the core to the entire system. It is designed to fit the user-defined Chart of Accounts and simplify the interaction of Accounts Payable and Property Manager for easy and accurate financial reporting. Integration with the other programs is fully audited and user-defined journals allow for simplicity in adjustments and journal entry of non-interfaced accounting. Interim trial closes may be done at any time. Budgeting and comparison statements are simple to create with the use of the Spreadsheet Interface. A Report Writer allows the creation of custom reports.

DeedMaster
Assists in surveying, land design and legal description evaluation
Macintosh Plus or larger; 1 MB of RAM (4 MB with System 7); System 6.0 or later.

DeedMaster is designed to assist realtors, surveyors, engineers, architects and government personnel in surveying, land design and legal description evaluation. Standard coordinate geometry routines allow users to manipulate field data and to produce a scaled drawing of the project. Furthermore, the plot may be printed on a printer or plotter or exported as a PICT file to CADD software for drawing purposes. Legal descriptions may be readily evaluated to determine correct closure, area and shape of the parcel. Coordinate values may be imported or exported as a tab-delineated text file.

FmHA Manager
Property management
Macintosh Classic II or larger; 4 MB of RAM; hard disk drive; ImageWriter II or LaserWriter.

FmHA Manager (FMG) is a property management system for Rural Rental Housing Apartment Projects financed by USDA Farmers Home Administration (FmHA). FMG includes full accounts receivable capabilities, including tenant receipts, tenant ledgers, ledger autocharge and posting summaries. Accounting reports include tenant receipts by property by day, tenant balance reports, charge reports and miscellaneous receipts reports. FMG provides the required Federal Government reports, including FmHA Tenant Certifications, Project Worksheets, Statement of Budget Income and Cash Flow, Monthly Reports and Waiting Lists. Property management reports include security deposit reports, tax credit reports, subsidy assignment reports, vacant unit/rent loss reports, notice to quit lease termination reports and mailing labels. FMG can handle up to 99 properties with 99 rental units per property and is available in three different versions (Professional, Deluxe and Basic). FMG was created with Helix Express. FMG is available in both single and multiuser versions. Total Management Systems is an Apple Authorized Value Added Reseller and is capable of providing complete office automation solutions, including custom software database development, installation, training and computer hardware.

Landcalc
Deed plotting and map checking program
Macintosh Plus or larger; System 6.0 or later.

Landcalc is a deed plotting and map checking program for real estate lawyers, appraisers and other professionals who need to see a graphical representation of deed descriptions. All information appears both graphically and numerically as it is input. It plots as users enter or edit metes and bounds data. Users can enter data in a variety of different ways: draw with the mouse, import from another program, fill in a spreadsheet, enter a series of bearings and distances or enter curves in a dozen different ways. Users can choose exactly which information should appear for each point, line, curve, boundary and field traverse. Complete closure information can be shown, including direction, length and relative accuracy.

Loan Qualifier
Assists in qualifying mortgage prospects, calculates all loan costs and generates a closing and qualification report
Any Macintosh.

Loan Qualifier assists in qualifying mortgage prospects, calculates all of the costs associated with the loan and generates an accurate loan estimate report. Purchases and refinances can be handled with: typical first mortgages; second mortgages; assumptions; seller carrybacks; and fixed, variable, equity or blended rate loans. It will support single-family, PUDs and multiunit real estate transactions. The program calculates whether the client qualifies and details the following: income required and maximum loan that will qualify; tax and insurance impounds; first and second mortgage principal and interest; property taxes and insurance; transfer taxes; and homeowners association dues. It reports application fees, such as appraisal, credit report, document stamps, escrow, notary, title, recording, processing and inspection. The tool also calculates pro rated taxes, pre-paid interest, qualifying ratios, total down payment, total monthly payment and all costs.

■ **MacExtractor**
Real estate files
Macintosh II or later; System 7.0 or later.

MacExtractor was developed to allow real estate agents to extract data from text files they download from their MLS systems. The data file must have labels preceeding the information the user is to extract. Users simply specify the labels preceeding the data they want and the length of information to extract. Users may define and save up to five different criteria for extracting. The extracted data can be easily imported into a database or spreadsheet.

Mortgage Loan Calculator
Qualifies buyers by loan type; for mortgage bankers, realtors and home builders
Macintosh 512KE or larger.

The Mortgage Loan Calculator is a series of programs designed to qualify buyers by five loan types. The system graphically displays a large calculator on screen with displays for loan type, annual income, loan amount, term, rate, long term debt, other monthly expenses, monthly P/I payment and home price. There are two basic methods for qualification: enter the annual income to compute the maximum loan amount, or enter the requested loan amount or home price to compute the required annual income. Results are instantly displayed for all categories and will be redisplayed if any new factor is entered to answer a buyer's what-if questions. The system utilizes maintainable default values for qualification, including ratios by loan type, closing costs, mortgage discount, loan rate, loan term, minimum down payment, federal and state tax rates, monthly housing expenses, expected appreciation, disclaimers and more. A selected loan-type worksheet can be printed, as well as an amortization schedule with options for annual or monthly detail, fixed and ARM loans with monthly or bi-weekly payments.

The Mortgage Office — Lite
"A" paper loan processing (FNMA) for bankers and brokers
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; PostScript-compatible laser printer.

The Mortgage Office — Lite processes residential loans from the 1003 origination through the 1008 lender hand-off. Designed with screen displays that look like the actual forms, the program is easy to use and provides self-teaching compliance with FNMA guidelines. It automatically creates verifications, the real estate schedule, the Good Faith Estimate, the Transmittal Summary and prepares the Truth In Lending Statement. It includes permanent telephone logs that record all calls concerning each client, a checklist tracking system for follow-up against loan conditions, a word processor, "quicklook" loan status reports and a built-in 4th Dimension database runtime. It can be used to take loan applications in the field on a portable PowerBook and was optimized for the Mac by a certified Apple developer, who is also an active loan broker.

On Schedule 2.0
Cash-flow planning for subdivisions and condominiums
Macintosh Plus or larger; Microsoft Excel.

On Schedule is designed to help real estate developers produce month-by-month plans for drawing down, using and repaying development loans. Users enter all cash inflow and outflow assumptions about their projects in one area of this spreadsheet model. They can specify the amount for certain expenses in any or all of the report function's 60 available months, fine-tune construction costs and vary their selling schedules to compare best-case and worst-case projections. Based on the given assumptions, the program forecasts projected absorption and cash inflows and outflows for each month. It also calculates how much of a development loan must be drawn each month to meet expenses. In addition, the program monitors loan status and identifies when a project will be sold and the lender repaid.

The Property Manager
Residential, commercial and ministorage property management
Macintosh Plus or larger; hard disk drive.

The Property Manager is a residential and commercial property management system that helps users manage scarce resources — time and capital — to increase their bottom line through better control and increased productivity. The system automates such tasks as automatic rent increase notices and profit and loss statements, along with complete ledger reports. A unique feature of the program, Note Pad, allows users to manage virtually any type of information. Each tenant, rental unit and vendor has their own Note Pad that is up to 1,500 lines. Through the use of the Note Pad users may track lease abstracts, legal information, maintenance histories, delinquency histories and more. Additional features include: complete tenant ledger with histories and delinquency, lease expiration and deposit refund notices; rental unit information, including vacancy analysis; multiowner trust account management; check writing, automatic mortgage payment and amortization; General Ledger with automatic posting of all activity; up to 1,500 properties with 1,500 units per property; mailing lists; and more.

Property Place 3.0
Residential rental property management
Macintosh SE/30 or larger; 5 MB of RAM; hard disk drive.

Property Place allows users to manage any number of companies (partnership, sole proprietorship and/or incorporated), complexes, buildings, units and tenants. It automatically calculates tenant and/or government (for subsidized tenants) due amounts in both cash and accrual systems; sends appropriate notices and statements; and tracks late fees, bounced checks, lease extensions and lease expirations. Property Place produces tenant rent ledgers tracking both tenant and government payments, and it allows users to produce work orders, pay vendors from the work orders (to avoid duplicate data entry) and report maintenance history by unit and building. And, new with version 3.0, users can manage retail and commercial tenants. Included is a full, double-entry accounting system (general ledger, accounts payable, tenant and miscellaneous accounts receivable) that allows users to manage different companies appropriately. On a company–by–company basis users can mix cash and accrual accounting, closing the books or not, gross potential revenue method of receivable posting or not, and tracking and printing work orders, invoices and statements or not. Property Place allows users to print checks and deposit slips, as well as reconcile bank accounts, which can be shared among companies. Users can batch transactions or post them immediately; and they can import transactions and vendors from other applications. Balance sheets (at the company level) and profit and loss statements (at building, complex and/or company level) are automatically produced. Some other reports are: Trial Balance; Cash Disbursements Journal; Cash Receipts Journal; Accounts Payable, Receivable, and Tenant Receivable Journals; General Journal; and General Ledger Detail Account Balances.

Prospector
Real estate management
Macintosh Plus or larger; hard disk drive.

Prospector is designed to manage real estate sales prospect lists, track the history of contacts with the prospect and automate the communications process as much as possible. The program records the standard address information, has multiple phone numbers that

can be automatically dialed, keywords and contacts. When a prospect is contacted, the information about the conversation is automatically dated and time stamped and marked for follow up if needed. If a follow up time is entered, an entry is recorded in a built-in scheduler. Form letters can be merged and labels can be generated automatically for any selection of prospects. Several fields are available for free-form notes and a hard copy address book can be generated. The program has standard reports, as well as a report generator. Prospector is ideal for area prospect farming. Detailed information on properties and subdivisions is also kept. Future enhancements will include contracts pending, commission earned and projected commissions, as well as agent expenses and agent goal setting.

■ Real Estate
Real estate listing management
Macintosh Plus or larger (68030 processor recommended); 2 MB of RAM; System 6.0 or later (System 7.1 recommended); hard disk drive.

Real Estate keeps track of all listings, agents and sales. Complete listing information, including up to two pictures (such as front and back views) can be entered either as scanned photographs or video digitized images. Real Estate is two files that provide a fast and powerful tool for Real Estate business. The Agent Lookup File contains information on all agents and agents that do business with the user. A unique Agent ID is assigned when entered, and all required information about that agent is entered automatically. The Real Estate file is the main working file, each listing is a unique record that can be viewed, printed, edited or deleted. A special Find request will list only the records with the specific Find criteria the user requests. Sales and activity reports can be generated.

Real Estate Analysis Model
Financial forecasting, analysis and valuation of real estate projects
Macintosh Plus or larger; Microsoft Excel or equivalent spreadsheet; printer recommended.

The Real Estate Financial Analysis Model system consists of four ready-to-use real estate analysis models on a 5-, 10-, 15- and 20-year basis. All the logic, equations and formats are provided. The user simply enters basic data and assumptions, and the models do the rest, including a complete valuation analysis of the real estate venture from eight different valuation methods, plus internal rate of return calculations. Discounted future earnings and discounted cash flow valuation methods are included with the valuation analysis. The following statements are generated automatically by each of the four models (based upon user input of assumptions and basic data): income statement (P&L), balance sheet (assets = liabilities + net worth), cash flow analysis, ratio analysis (about 60 ratios, including RMA ratios) and valuation analysis. These models were designed for use by both real estate developers and investors of income properties. The models can be easily customized for various types of real estate projects: single-family units, multiple-family units, apartments, condos, office buildings, commercial, industrial or any combination of the above. These models also analyze debt and equity financing of any real estate investment project, including profitability and growth analyses, as well as cash flow break-even, etc.

Real Estate Connections
Prospecting, client follow-up, farming, time management, form letters and complete personal information management for real estate salespeople
Macintosh Classic II or larger; 2 MB of RAM (4 MB with System 7); hard disk drive.

For the real estate salesperson who wants a complete personal productivity system, Real Estate Connections combines two outstanding tools: Danny Goodman's Connections, a personal information manager that includes graphic calendaring (including group calendaring), to-do lists, telephone contact management and point-and-click data import/export; and RealData's special add-ons that make this package a real estate expert. With Real Estate Connections, users can keep extensive information on prospects, farm territories and properties. Pop-up dialogs allow users to set criteria for retrieving information. Users can then print reports, mailing labels or even personalized form letters for the selected list. A mortgage file allows users to store data on available loans, and the program uses this information to help users prequalify prospects for those loans. Users can also track the progress of a personal listing or plan out the events that will lead from a binder to a closing. Just enter data on the listing or closing progress screen and the information manager will keep track of all these dates and remind users of them automatically as part of the appointment calendar. The customizable telephone directory allows users to dial calls at the click of a mouse and to keep a detailed history of every telephone contact. Users can even schedule an automatic reminder to call again at a later date.
$395 retail; includes Danny Goodman's Connections from Concentrix Technology

Real Estate Investment Analysis Version 8.0
Income-property investment analysis
Macintosh Plus or larger; Microsoft Excel 4.0 or later.

Real Estate Investment Analysis produces a comprehensive 10-year projection for any type of residential or commercial income property. With it, the user can construct anything from a simple and straightforward analysis to a highly-sophisticated investment scenario. An income summary allows the user to enter revenue on a lease-by-lease basis, with projected escalations, pass-throughs, commission cost and more. Information from this section is passed on to an Annual Property Operating Data Module, where the user can then project individual expenses. In its third section, the program produces a complete cash flow, tax and re-sale analysis, allowing the user to enter assumptions about the purchase, financing, taxes, operation, etc., and use this information to project the before- and after-tax benefits of ownership and resale. Among the factors that can be considered are purchase price; adjustable or fixed-rate financing; capital improvements; vacancy and credit loss; amortization of loan points, fees and closing costs; reserves against negative cash flows; future refinancing of the property; and much more. The program calculates numerous measures of investment quality, including IRR, MFMRR, NPV, cap rate, debt coverage ratio and cash-on-cash return. It even compares the property's return to that of a fixed-rate investment, such as a Treasury Bill. Reports include detailed analysis, summarizing the most important aspects of the analysis and exhibiting them in a concise, uncluttered and professional format. The Excel version of this product is shipped as an Excel "workbook" with custom menus and buttons, making it exceptionally easy to use. It is available for the Macintosh using Microsoft Excel 4.0 or later; for Windows using Microsoft Excel 4.0 or later or Lotus 1-2-3 r4; and for MS-DOS using 1-2-3 2.01 or later.

Real Estate Partnership Plus
Income property analysis
Macintosh Plus or larger; Microsoft Excel.

Real Estate Partnership Plus is a 10-year income property analysis designed for investments structured as limited or general partnerships. It performs a complete before-tax property analysis, detailing income, expenses, financing, cash flows, reserves, improvements and potential resale. It also allows users to allocate individual percentages of cash flow, taxable income and profit from sale to the limited and general partners, as well as a preferential return to the limited partners. The program then produces a capital account analysis for the general and limited partners, showing their investment, cash flow, taxable income and ultimate profit, all on a year-by-year basis. Finally, it produces a straightforward property overview and partner's overview, suitable for presentation to a potential investor. The program includes a powerful statistical model for the projection of future income and

RealScan System III
Real estate market information system
Macintosh Plus or larger; 45 MB hard disk drive per county; CD-ROM drive.

RealScan is a real estate market information system that allows access to millions of property information records for major metropolitan areas in South Florida. Using a Macintosh and a CD-ROM disc drive, the system provides instant access to accurate and comprehensive information about ownership, addresses, prices paid for properties, mortgage amounts, assessed values, real estate taxes and legal descriptions of property boundaries, as well as detailed information about buildings and features, including bedrooms, bathrooms, living square feet, pools, patios, tennis courts and other amenities that affect property values. Commercial property features, such as loading docks, elevators and sprinkler systems, are also displayed. The system provides absolute control over how to search for properties and what information is displayed, including calculated fields to analyze data.

Residential Real Estate Tools
Sales tools for residential real estate agents
Macintosh Plus or larger; ClarisWorks; Microsoft Works; or Microsoft Excel/ Aldus PageMaker combined.

Designed for the sales professional, Residential Real Estate Tools offers more than three dozen solutions: spreadsheets, sales letters, forms, newsletters and mailing pieces. Among the spreadsheets are a Competitive Market Analysis, Buyer's Estimate of Closing Costs, Seller's Estimate of Sale Proceeds, Rent vs. Buy decision model, Mortgage Payment Calculator, Amortization Schedule and others. Also included is a sophisticated goal-setting model that helps users plan and track, on a month-by-month basis, the various critical activity levels they must achieve to reach their commission income objective. The package provides 16 sales letters that can be customized to a user's needs, covering such topics as CMA offer, FSBO follow-up, anniversary of purchase and more. Other mailing pieces include newsletters, a listing flyer and several postcard layouts, all of which can be customized. Each item is designed to serve a useful function, while at the same time helping users convey their professionalism to clients and customers.

REsource
Manages property information and real estate market data
Macintosh Plus or larger; 2.5 MB of RAM; hard disk drive.

REsource multiplies the productivity of commercial real estate professionals through complete management of property information and real estate market data, along with contacts and follow ups. It combines powerful contact management with comprehensive real estate know-how. Users can match available or comparable properties to the needs of clients; print REsource reports or user-defined report formats; prepare rent rolls, market analysis and market absorption reports; store and print floor plans, brochures and maps; and maintain transaction history on properties. The program provides complete and comprehensive client/owner/broker contact support with a tickler file, letter writer and contact history. Tenants, investors, property managers — as people, companies and organizations — all fit into REsource smoothly. Users are notified of follow-up tasks, appointments, option dates and recurring events. With REsource, users have the tools to gather solid properties data, maintain great client contact and market their knowledge professionally.

SMILE System
Interactive color image database for real estate brokerages
Macintosh IIsi or larger; 5 MB of RAM; 60 MB of free hard disk space; 13-inch RGB monitor; CD-ROM drive.

SMILE is an acronym for System of Multiple-Colored Images for Internationally Listed Estates, Inc. With the SMILE System, homes and other real properties — regardless of where in the world they are located — can be listed and viewed without leaving the broker's office. Using Macintosh computers and software proprietary to SMILE, SMILE offers brokers access to up-to-date information on properties for sale, lease or rent worldwide, and accompanies that information with beautiful color images of every one of those properties. Features include: open-ended multimedia technology allows easy integration of new features, such as motion video and Kodak Photo CD access; photos can be displayed at maximum resolution available on a user's system, up to 24-bit, photorealistic color; is distributed on CD-ROM; discs hold up to 6,000 listings, each with six pictures (no connect-time charges as with dial-up systems); users can search by location (using maps), price, rooms, lot size and more; and agents can print brochures of any SMILE property on demand.

■ Soffice Realty
Real estate software
Macintosh Plus or larger; 2 MB of RAM; System 7.0 or later; hard disk drive recommended.

Soffice Realty is real estate software that is a full-featured, high capacity, dependable and easy-to-use system that handles almost all aspects of the real estate brokerage. Users may be novice with computers, but will still find using the software a breeze; context-sensitive Help is pervasive. It improves the speed of handling and tracking listings, escrows, clients, properties, contacts, advertisements, messages, correspondences, notes, drawings, financial analysis and accounting. These increase sales, efficiency, accuracy, provide fast retrieval of records and reduce operating costs. Computerized handling of clients' needs will project an efficient and professional image. Soffice Realty extends reach, mind, time, voice and income.

The Church Office
Church management
Macintosh Plus or larger; hard disk drive.

The Church Office (TCO) is a powerful church management tool specifically designed for easy use and minimal training. TCO contains many on-screen graphics and easily recognizable symbols. A Record File stores basic family information, along with personal information, such as dates, volunteer work, committees and church school activities. A Contributions file records up to three giving accounts and unlimited special gifts for both adult's and children's envelope number. A streamlined weekly entry procedure makes updating quick and simple. Quarterly statements are automatic with individual pledge amounts recorded on each card. An Attendance and Rolo Card file are automatically generated, and online help files are readily available. Users have their own password and access levels are assigned to restrict users to view/change selected files. TCO can be linked to a word processor and graphics program. More than 35 ready-to-run reports include mailing labels, volunteer lists, directory listing, contribution summaries and more. Mail merge for form letters is available. Custom reports and file conversion from an existing database are available. Full support is provided by tlc Software.

ChurchWorks
Church management
Macintosh Plus or larger; 20 MB hard disk drive; System 6.5 or later; ImageWriter II, PostScript laser or QuickDraw printer.

ChurchWorks is an integrated church management program that tracks attendees, visitors and groups and contains specialized features, such as abilities (e.g., "Who can sing in choir?") and user-defined fields. Attendance is done by clicking on names and reports show who has missed a specified number of times since a specified date. ChurchWorks features a complete double entry fund accounting system (General Ledger, Cash Disbursements), but it is so automatic that most users don't have to know their debits from their credits because it posts all activity to the accounts and writes the journals, automatically. It boasts a complete set of reports that often interpret the numbers for non-bookkeepers. It tracks giving, can analyze giving patterns and write tax letters any time during the year. ChurchWorks tries to catch users' mistakes and suggest corrections, has more than 600 report options and does not require the memorization of codes. Other features include graphing, passwords, limited in size only by disk size, single and multiuser, tutorial and reference manual, superb telephone support and StarSoft's willingness to add customized features. Upgrade of single user to the upcoming new release, ChurchWorks II, is free if purchased in 1993. Update includes a better Macintosh interface, color, payroll, pledges, built-in word processing, and it can run on both the Macintosh and Windows platforms, even on the same network.

Honor Roll
Ministry management
Macintosh Plus or larger; 4 MB of RAM (6 MB recommended for System 7); hard disk drive; System 6.0.5 or later.

Honor Roll is written in 4th Dimension — a fully relational, industrial strength, database manager for records of individuals and organizations, communication and reporting needs. It automatically coordinates individual and organizational data — alternate addresses, organizational affiliations, associations, donations and pledges. Custom fields enable tracking of unique data. Password protection restricts access according to work levels. Automatic reports, receipts, Rolodex, graphs, labels, merge data documents and user preferences make communication and reporting easy. Features include: mailing labels sorted by name or zip code; phone dialing (requires modem); extensive search and quick report functions which retrieve information to user specifications, export-import capabilities between associates and provision for international data. Layouts are practical with a few steps: intuitive, clearly organized and anticipating a user's moves and needs. Thoughtful details serve the real user environment, providing flexibility and shortcuts that save time and training. Customization provided at reasonable rates. Program is integrated with 4D Runtime and networks with Apple-Talk.

Roll Call
Church management
Macintosh Plus or larger; 4 MB of RAM (6 MB recommended for System 7); System 6.0.5 or later; hard disk drive.

Roll Call is a written in 4th Dimension — a fully relational database manager for personal records, communication and reporting needs. It automatically coordinates individual and family data — alternate address, differing names, significant dates, visitation history, confidential comments, activity or class involvements, attendance, pledges, envelope numbers and donations. Custom fields enable tracking of unique data. Password protection restricts access according to work levels. Automatic directories, rosters, reports, graphs, labels and merge data documents make communication and reporting easy. Features include: mailing labels sorted by name or zip code, phone dialing (requires modem) and extensive search and quick report capabilities which retrieve information to user specifications. The layouts are practical with few steps: intuitive, clearly organized, anticipating a user's moves and needs. Thoughtful details serve the real church environment, providing flexibility and shortcuts that save time and training. Program is integrated with 4D RunTime.
$345 retail; Roll Call 300 (restricted to 300 individual records)
$345 retail; unrestricted upgrades
$595 retail; Roll Call 2 (networks with AppleTalk)
$595 retail; Roll Call 3 (network requires use of 4D Server software)
$795 retail; Roll Call Plus
By The Numbers, Inc.; RR1, Box 75; Sutton, NH 03221; 603-927-4508 or 800-554-9116

Verse Search V5.2
Complete Old and New Testament Bible with programs for searching the text
Macintosh Plus or larger; 1 MB of RAM.

Verse Search is the entire text of the Bible with programs for searching the text instantly for any English words or phrases (using a built-in word list and Bible thesaurus), creating cross-references useful for personal study of the scriptures and printing any portion of the text. It is available in the King James version, New International versions, New King James version or Revised Standard version (with Apocrypha), New Revised Standard and The Living Bible.

Topics is a reference library of indexes to the Bible text for more than 200 of the most prominent scripture subjects. People is a reference library of indexes to the Bible text for more than 140 of the characters most prominently addressed in scripture. Personal Commentary is a feature of Verse Search that allows each users to add personal commentary to any verse in the Bible. The Greek Transliterator allows access to the text of the King James or New International New Testament with Strong's reference numbers assigned to the English words. The Hebrew Transliterator allows access to the text of the King James Old Testament with Strong's reference numbers assigned to the English words. Chain Reference allows Bible verses to be tied directly to any word within a verse. Verse Typist is a desk accessory that will automatically copy and paste Bible verses directly into a user's word processing document.
$99.95 retail; Verse Search (includes a Bible thesaurus and one translation of Bible text: King James Version, New International Version, Revised Standard Version with Apocrypha, New King James Version or New Revised Standard Version with Apocrypha and The Living Bible)
$49.95 each retail; Topics, People, Personal Commentary, Chain Reference, Verse Typist, Bible Dictionary, Bible Outlines
Free; Instant Access
$99.95 each retail; Greek Transliterator, Hebrew Transliterator

Vertical Markets/Restaurant Management

■ Cycle Menu Master
Menu planning program
Macintosh Plus or larger; FileMaker Pro runtime.

Cycle Menu Master is a menu planning program for any type of food service operation, whether large, small or multiunit. It offers a five or seven-day week cycle or cycles ranging from eight to 30 days and longer if desired. It is designed to save menu planning and preparation time, providing more freedom to analyze and plan better meals; simplifies purchasing and facilitates quantity purchasing by defining the menu pattern well in advance; eases employee scheduling problems; and improves forecasting because continuous experience over an extended period results in accumulated data on consumption and customer food preferences. Its flexibility allows up to 13 choices for each meal period, provides systematic utilization of leftovers and is equally adaptable for low client turnover operations like a cafeteria, which may want longer cycles.
$399 retail
Simplified; 642 E. Squirrel Tail Dr.; Tucson, AZ 85704; 602-797-2990 or 602-797-7865 (fax)

The Daily Bookkeeper
Daily bookkeeping for restaurants of any size
Macintosh Plus or larger; hard disk drive.

The Daily Bookkeeper is specifically for restaurant daily bookkeeping. It produces all the reporting restaurateurs need to accurately reconcile their daily cash. The program reports daily sales, cash paid outs, credit cards, bank deposits, as well as other cash and charge transactions. This information is then used to calculate the dollar over/short amount for the day. Additionally, the daily weather and other comments are reported, so restaurateurs can maintain a printed record showing the effect of weather or special events on daily business volume. Another benefit of the Daily Bookkeeper is the sales reporting for each day of the week, each week of the month and each month of the year, as well as the year-to-date. These sales reports are of enormous value and are automatically updated from the routine daily entries in the Daily Bookkeeper. For producing financial statements, the program reports month-to-date debit and credit postings for each General Ledger account. These General Ledger account distributions are itemized for audit review and totaled for easy posting to the General Ledger.
$695 retail
RestaurantComp; 5 Echo Pl.; Larkspur, CA 94939; 415-924-6300

ExecuChef
Master recipe file, inventory, vendor/client tracking, daily cash & sales and payables/receivables
Macintosh Classic or larger; 2 MB of RAM (4 MB for System 7); hard disk drive; System 6.0 or later.

ExecuChef is a collection of five integrated modules (Master Recipe File, Inventory, Vendor/Client Tracking, Daily Cash & Sales and Payables/Receivables) from which users may select desired features. Recipe Costing is based on current ingredient costs. Users can scale recipes and customize daily prep lists; generate shopping lists and organize equipment lists for special functions; and search recipes by more than 50 different categories or by a single ingredient. Inventory breaks down case costs into pack and unit costs. Users can create Daily Orders based on pre-established par stocks. Physical inventory auto-calculates product value on-hand. Users can sort by item, department, vendor or shelf number. Daily Cash & Sales supports up to eight register departments in five different formats (including department, shift and date) for any desired period. Payables/Receivables generates invoices linked to a client list. Users can disburse payments to up to seven different accounts.
$495 retail; single user
ExecuChef; 20 Sunnyside Ave., Ste. A-274; Mill Valley, CA 94941; 415-383-8540 or 415-383-8125 (fax)

Five Star *** 2.0**
Restaurant management/POS
Macintosh LC II or larger.

Five Star ***** Version 2.0 features improved print handling and reporting. Designed for full-service restaurants and dining rooms generating $10,000 per week or more in sales. Featuring unlimited capacity, it can handle the heaviest workload. The POS system is keyboardless. The waitstaff use a ticketless system, reducing theft. The system generates all sales and usage reports necessary for the day-to-day hands-on management of a restaurant, including food vendor orders and the taking of inventory. The program tracks employee hours and generates necessary information for payroll. It interfaces with most accounting software to pass information to a GL package. Program customization, on-site installation and training of waitstaff are available. The Basic Package includes software, two POS stations, a manager's workstation, cabling and four printers.
$9,995 retail; basic package
$3,995 retail; version 2.0

■ Kitchen Keyboard
Cost control recipe program
Macintosh Plus or larger; FileMaker Pro runtime.

Kitchen Keyboard, which also incorporates an advanced Cycle Menu Master, is a computerized cost control recipe program designed for use by every type of food service business, including restaurants, caterers and such large-scale operations as schools, rest homes, hospitals and jails. It provides an up-to-date cost of every ingredient in each recipe, the unit cost of each meal regardless of the number of persons served, exact measuring and weighing of individual menu items to correlate with the number of meals served and a permanent record of the user's recipes with easy flexibility for any changes. Created jointly by a veteran food service expert and a computer specialist, KK helps managers keep within budgets by controlling food costs, eliminates slow and arduous manual costing, is especially useful for high-cost items whose prices fluctuate frequently and enhances profitability by providing precise, specific information on which to base forecasting.
$2,500 retail

Maître d'
Comprehensive catering and event planning software
Macintosh II or larger (68040-based Macintosh recommended).

Maître d' is a comprehensive catering and event planning package. Detailed event proposals, comprehensive coordination reports, a complete set of prep lists, a user's personal recipe library and instantaneous recipe cost updates insure profits through accurate job costing. In addition, Maître d' includes comprehensive facilities information and scaled-to-order floor plan development, accounts receivable, personalized customer communication with built-in mail merge, multiple supplier pricing, inventory control and custom graphic menu design with multimedia graphic presentation. The event proposal is a complete customer presentation package. Coordination reports provide a list of everything needed for each event, including to-do notes and timelines. Prep lists include date range shopping lists for food, beverages, other products and rentals, as well as a services list. Recipe prep lists are scaled to order, insuring consistency. Recipes can be selected from a user's unlimited recipe library by type, nutrition information, ingredient, ethnic group or cost. Any menu can be stored and easily duplicated. Sales reports keep users abreast of how their business is doing at all times.
$2,595 retail; single user
$3,995 retail; multiuser (three users)
$395 each additional user

Updates and maintenance support for one year are included in the price
Maître d' Software; 103 Redwood Rd.; Fairfax, CA 94930; 415-459-5707 or 415-453-8288 (fax)

■ **Maître d' Restaurant Inventory Tracker**
Inventory control and purchasing module
Macintosh II or larger (68040 processor recommended).

Maître d' Restaurant Inventory Tracker is an add-on module for Maître d' Restaurateur, creating a complete inventory and purchasing system for food, beverage and non-food products. Users create purchase orders and generate detailed reports on suppliers, products, purchasing, receiving and inventory adjustments. Maître d' Restaurant Inventory Tracker also provides an integrated mail merge function for printing and faxing vendor correspondence and purchase orders. It includes updates and maintenance support for one year.
$495 retail; multiuser pricing available
Maître d' Software; 103 Redwood Rd.; Fairfax, CA 94930; 415-459-5707 or 415-453-8288 (fax)

■ **Maître d' Restaurateur**
Food costing and menu design
Macintosh II or larger (68040 processor recommended).

Maître d' Restaurateur allows users to gain control of their recipe costs through accurate food costing based on the most current prices available for vendors. When users enter a price change of an ingredient found in any number of recipes, all the related recipes will automatically reflect the new cost. Recipes can be viewed by type, ingredient, ethnic origin and nutritional data; and users can forecast all food needs based on past sales to produce complete kitchen prep lists and shopping lists. Products and suppliers reports can be easily generated, keeping users well informed. Food sales summary reports identify which foods and recipes sold the most and generate the most profit for any given date range. Users can create and store an unlimited number of professional menus. Menus can be custom designed and printed in black and white or full color.
$695 retail
Maître d' Software; 103 Redwood Rd.; Fairfax, CA 94930; 415-459-5707 or 415-453-8288 (fax)

■ **Maître d' Restaurateur Caterer**
Complete event coordination and catering sales tracking module
Macintosh II or larger (68040 processor recommended).

Maître d' Restaurateur Caterer is designed for the full service restaurant and catering business. The program tracks all food/recipe and non-food costs for on-premises catering events. Users can generate good-looking personalized proposals as they select recipes and products that make up each event. Proposal packets consist of cover page, cover letter, menu, line item listings and price sheet. In addition, creating a proposal generates a complete set of comprehensive event coordination reports, date range prep and to-do lists. Proposals may be stored as master menus and used again, making proposal writing as simple as a click of a button. Maître d' Restaurateur Caterer also provides scaled recipe cards for kitchen prep, historical customer information on events and revenues and integrated customer mail merge.

Restaurant Manager
Complete back office restaurant system
Macintosh Classic II 4/80 or larger; System 7.1 or later.

This complete back office system for restaurants handles restaurant inventory; product and menu item analysis; POS integration and daily sales; accounts payable; accounts receivable; and general ledger.
$1,195 and up retail; depends on modules chosen
RWS Restaurant Services; 4300 Promenade Way, Ste. 220; Marina del Rey, CA 90292; 310-822-8820 or 310-822-7909 (fax)

RestaurantComp
Restaurant Management
Macintosh Plus or larger; hard disk drive.

The Food & Beverage Inventory, Recipe Profit Analyzer, Sales & Food Cost Analyzer and 13 Period History are four programs for controlling food costs. The Food & Beverage Inventory can stand alone or be integrated with the Recipe Profit Analyzer and the Sales & Food Cost Analyzer programs. The Inventory program handles food, beverage, beer, wine, liquor and supplies. It organizes, calculates and writes inventory reports; and totals inventory quantities and calculates inventory usage and values. The Recipe Profit Analyzer, which shows how ingredient prices affect recipe costs and profits, works with the Food & Beverage Inventory program. The program can be used to control recipe costs or to profitably plan new menus. Sales & Food Cost Analyzer works along with the Food & Beverage Inventory and Recipe Profit Analyzer programs. The program uses the sales quantity of each menu item to calculate profit contribution and theoretical food cost. 13 Period Inventory/Food Cost/Sales History tracks past inventory, food costs and sales.
$1,195 retail; Food & Beverage Inventory
$495 retail; Recipe Profit Analyzer
$195 retail; Sales & Food Cost Analyzer
$295 retail; 13 Period Inventory/Food Cost/Sales History

■ **RMSplus**
Restaurant management
Macintosh Quadra 605 or larger; 4 MB of RAM; 40 MB hard disk drive.

RMSplus is a fully integrated restaurant management program. RMSplus consists of the following modules: inventory, general ledger, accounts receivable, accounts payable, payroll, menu management and purchase order. RMSplus keeps a detailed history of sales by menu item and automatically deducts inventory by ingredient. Financial statements can be generated on demand to get an up-to-the-minute analysis of a user's financial position. Purchase orders can be automatically created based on current inventory levels. Sales can be imported directly from NCR cash registers, which will automatically update inventory for increased productivity. Payroll checks, W2s, 1099s and accounts payable checks can be printed directly from RMSplus, eliminating the need to write checks manually. With the accounts receivable module, RMSplus is an ideal system for any catering business. RMSplus generates all standard accounting and management reports, such as accounts payable and receivable, aging, balance sheet, income statement, inventory usage and many others.

Vertical Markets/Retail

Antique/Art Dealer
Dealer management system for antique, art and antiquities professionals
Macintosh Classic II 4/80 or larger; System 7.1 or later.

Antique/Art Dealer is a system that manages three key needs of antique and art galleries: client history and interests; inventory tracking and consignment; and sales receipt and accounts receivable processing. All modules will be partially customized to fit a gallery's specific needs.
$1,275 per module retail
RWS Information Systems; 4300 Promenade Way, Ste. 220; Marina del Rey, CA 90292; 310-822-8820 or 310-822-7909 (fax)

Credit Card DB
Credit card processing and bank authorizations
Macintosh Classic or larger; Hayes or Hayes-compatible 300/1,200 baud modem or E.E.S. Companies' Multi-Port Unit.

Credit Card DB is a 4th Dimension compiled database that performs automated credit card processing, authorization and funds capture for credit card merchants. Credit Card DB eliminates a credit card terminal and could reduce seven- to 10-day float time to one day and bank percentage charges by 1 to 2 percent or more. The program maintains an audit log of credit card transactions that may be searched by credit card number, credit card holder's name and transaction type. Features include limited customer and inventory file storage, automatic credit card number and expiration date validation, single and batch transaction processing and main and alternate system access phone number dialing.
$599 retail
E.E.S. Companies, Inc.; 2 Vernon St., Ste. 404; Framingham, MA 01701; 508-653-6911 or 508-650-1872 (fax)

DB:$ Retailer's Advantage
Multiuser, multistore point-of-sale system
Macintosh Classic or larger; hard disk drive.

DB:$ Retailer's Advantage transfigures a Macintosh into a point-of-sale (POS) system for one or more stores and can link them all together. It is designed for the retailer who wants to take the complexity out of store management. It manages inventory, writes purchase orders, receives merchandise by purchase order, display six levels of quantity or price breaks, sell "bundles" and track serial numbered inventory items. It includes mail list and marketing capabilities. Accounting information links to third-party accounting systems. Many pre-defined reports with full access to data is available through an optional report winter. StoreCom is used to transmit information between stores (optional). Cash drawers, 40-column printers and bar-code readers are available and supported.
$1,795 retail; single user, single store
$3,495 retail; multiuser (1st five stations)
DB:Solutions, Inc.; 929 Sir Francis Drake Blvd., Ste. C-238; Kentfield, CA 94904; 415-461-9500, 800-888-2640 or 415-461-9501 (fax)

DB:$ Retailer's Edge
Mulituser point-of-sale system
Macintosh Classic or larger; hard disk drive.

DB:$ Retailer's Edge transfigures a Macintosh into a point-of-sale (POS) system. It is designed for the retailer who wants the power of the DB:$ Retailer's Advantage but in a "lite" version with the robust capabilities to place items on order, provide estimates or quotes and much more. It places items in "sale" (mark downs) and will quote individual pricing. It manages inventory, writes purchase orders and receives merchandise by PO. Customer balances are maintained for the purpose of layaways and customer convenience. Many pre-defined reports with full access to data are available through an optional report writer. Cash drawers, 40-column printers and bar-code readers are available and supported.
$385 retail; single user

Inventory
Assemblies, sub-assemblies and parts
Macintosh 512K or larger.

This inventory system is based on three categories: assemblies, sub-assemblies and parts. A parts list or bill of materials is kept for each sub-assembly. When a part or a sub-assembly moves into a "work in progress" state, the parts inventory is automatically adjusted. The parts inventory is managed by finding the optimum reorder level, and a signal is given when that level is reached. The program is suitable for the inventory management of a small manufacturing or merchandising company. The program has modules that keep track of the orders and sales. When parts are received, the inventory is automatically updated. Similarly, when something is sold, the appropriate item(s) is removed

These Products Available Through Bottom Line Distribution
1-800-347-1923

from inventory. All updates are dated, showing dates of the present update and of the last previous update. This program allows users to keep track of what is going on, hour by hour, where things are, where they are coming from and where they are going. It is a simple common sense aid to efficient business practice.

InventoryPro FM 3.1v2
Inventory solution for manufacturing and retail
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; FileMaker Pro 2.x; System 6.0.5 or later.

InventoryPro offers users a complete inventory solution for both manufacturing and retail with the ability to perform POS. With the Service module, anyone who uses or is in a service-related industry has the ability to create and track the status of service work orders and service history by job, client or product. InventoryPro consists of 14 interworking modules (with four optional modules, ServPro for service, GarMan for the garment industry, PayPro employee management software with a full-featured payroll program and SmartCard, the intelligent weekly time card). Import and export features allow InventoryPro FM to work with many accounting and spreadsheet packages. There are three levels of password-protected operations covering data entry, deletions and corrections and full program restructuring. The 14 standard modules are: Order Entry, Quotes, Invoicing, Customers, Inventory Data, Purchase Orders, Receivers, Suppliers, Requisitions, Shipping Log (or Manifest), Transporter, Petty Cash, ProjectPro and Service Orders.

Mac Business Engine
Integrated business operations management system
Macintosh SE with accelerator or Mac II family; 1 MB of RAM; hard disk drive; Double Helix 3.0.

Mac Business Engine is a complete integrated business management package that can be used as is, or as the basic skeleton for expansion into a complex business operations management system. The base system contains data relations for Customers, Vendors, Products, Parts, Sales Orders and Purchase Orders. The Parts relation incorporates a bill of material to update parent product costs and can be expanded to do multi-level inventory control. The customer file is set up to handle unlimited ship-to addresses. Both sales and purchase orders will handle multiple line items and any line item can reference a product on file for inventory control or be entered manually. The system handles inventory control for On Order, Stock on Hand and Allocated amounts. Extensive sales analysis reports and order history analysis are included (customer by product, product by customer and the same by ship-to location). A label making module is also included.
$695 retail; Base System, including source code
Macintosh Business Systems, Inc.; 3 Country Ln.; Mamaroneck, NY 10543; 914-698-7215

Mac-POS 6.3
Inventory control software
Macintosh Plus or larger; hard disk drive.

Mac-POS is designed for retail, wholesale or manufacturing businesses who require inventory control. Designed for minimal training time and ease of use, it provides seamless integration for order entry, inventory control, order tracking, bar-code interfacing, purchasing and reporting in one application. Key features include: fast item look-up, fast printing and order completion. Great flexibility allows setup for most any business. Other features include: cash drawer control, touch screen interface, employee security, automatic purchasing, bill of materials, kits, service information tracking, serial numbers and more. It is available for single, multiuser operation and multiple locations.
$395 and up retail
$69 retail; trial version
Demo disk is available
Simply Outstanding Software; 944 Weber Ln.; Erie, PA 16509; 814-864-2623 or 814-459-0217

MacAuthorize
Authorizes credit card transactions
Macintosh Plus or larger; asynchronous modem.

MacAuthorize authorizes credit card transactions using bank card credit networks. Transactions may be authorized on an individual basis or "batched" and authorized all at once, depending on the authorization agency the merchant uses. Transactions are stored in batches on the Macintosh and may be reviewed, printed, imported, exported and manipulated with the same ease of use expected from a Macintosh application. MacAuthorize uses an asynchronous modem to call an authorization agency to obtain the credit authorization. The application is designed to access most major credit authorization networks. (Note: arrangements with a credit authorization agency are not provided with the product.) MacAuthorize handles all major credit, travel and entertainment cards, as well as other credit cards, including private label cards. It can also process Check Guarantee (MICR and driver's license). A complete transaction set is available, including sale, credit, void, post authorizations, daily draft settlement, etc. Other features include instant batch or daily totals, flexible Draft Capture options, extensive online help and security features to prevent unauthorized transactions by merchant personnel.
$315 to $395 retail; price depends on authorization agency used
Tellan Software, Inc.; 3286 Knightswood Way; San Jose, CA 95148; 408-274-1110 or 800-483-5526

MacDealer
Instore manager and product demo
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

MacDealer is a retail point-of-sale application developed specifically for Macintosh computer resellers. As a management tool, MacDealer will use sales information to produce invoices, picking lists, purchase orders and service contracts (including AppleCare). It even uploads AppleLink dealer price lists automatically and posts changes directly to all product records, while scrupulously keeping the inventory up to date. It will store a scanned picture of the item so customers can view not only product information but their pictures as well. As a customer relations device, a "client" set up in the customer display area gives customers something to "play with" that will catalog them and their interests in the database. As a sales follow-up tool, MacDealer's ability to sort out leads by anything from salesperson to customer interest area supports sales efforts by responding instantly to opportunities. When a new item comes in, users can quickly and easily trigger interest-targeted follow-up letters and labels required for running successful promotions.

MacRegister
Point of sale, order entry, accounting and inventory control database management system
Macintosh Plus or larger; 1 MB of RAM; 20 MB hard disk drive; printer.

MacRegister is a fully integrated point of sale, accounting and inventory control database management system for use by wholesale or retail sales and service businesses. Features include: point of sale functions; accounts receivable and customer functions; purchasing, accounts payable and vendor functions; inventory control functions; control functions (end-of-period and end-of-day updates, system setup parameters, employee information and mailing labels); general ledger functions; more than 80 reports; and more. An optional bar-code reader and an optional cash drawer may also be attached.
$999 retail; single user
$1,500 retail; multiuser
A. B. Computers; 36 Second St.; San Francisco, CA 94105; 415-495-7404 or 415-495-7405 (fax)

MacTileManager
Retail point-of-sale, accounting and inventory
Macintosh with 68030 processor or larger; 8 MB of RAM; System 6.0 or later (System 7.x recommended); dedicated server for network use.

MacTileManager is a retail point-of-sale application developed specifically for users in the floor- and wall-covering business. Comprehensive inventory management features include automatic conversion of Metric and English quantity units into square foot, per piece and per carton pricing and inventory quantities. A bar-code scanner may be used at the point of sale to input item codes. It prints product labels with bar codes to be affixed to items on display. PAR values trigger automatic generation of purchase orders to raise stock quantities to PAR or greater levels at the point of sale. Customer invoices automatically generate aged A/R schedules. Full and partial payments, as well as credit memos, update A/R in the background. The program also provides up-to-the-minute customer statements, sales journals, inventory and receiving reports, mailing lists and labels.
$595 retail; single user
$179 retail; each additional user
Synergy Marketing Communications, Inc.; 11 Joseph Ct., Ste. 213; Syosset, NY 11791; 516-935-9151 (phone/fax)

Mail Order & Business Control III (MOC3)
Mail order and business management
Macintosh Plus or larger.

Mail Order & Business Control III is designed for small business and individuals operating a mail order-type business. One person can operate and control the entire business. The MOC3 program provides an interactive tool for operating a user's business. MOC3 features a real-time "clairvoyance" feature that instantly looks up description and price data from a product catalog. MOC3 includes the templates for both the price list and product catalog. The products catalog contains all items for sale, which includes a brief description, sale price and a "Full Color" picture option. This catalog can be updated by a user or MOC3 will create a catalog from invoice entries. The catalog can be updated at any time. When a user enters customer names and the product descriptions, MOC3 looks up the data from the catalog and fills in the balance of the data while a user types. This is the "clairvoyance" feature that provides the automatic look up and insertion of price, description, customer name and address data. If MOC3 finds a match with any of the items, it fills in the rest of the data entry for a user, saving valuable time as orders are entered. Product inventory and dollar value of stock on hand is automatically updated as orders are entered. Customer billing, statements and 30-, 60-, 90-day invoice aging and all sales information is available. Invoices that include backordered items can be located and viewed as required. MOC3 also provides tools for bulk mailing and retrieval of any data for use within forms or letters. User-constructed form letters with specific data from the MOC3 database can be constructed for customer updates or mailers. MOC3 is customized before shipping with company address, logo and signature, or these items can be entered by end users.
$395 retail; includes Panorama Direct database, manuals

Merchant 4.0
Integrated book keeping software
Macintosh with 68040 processor or larger (Macintosh Centris 610 recommended); 4 MB of RAM; 10 MB of free hard disk space; laser printer.

Merchant is integrated book keeping software for order processing and invoicing, accounts receivable, purchasing and accounts payable and inventory control. Merchant is built on Helix Express. All purchasers have complete access to its internal workings, including the look of the forms, the layout of the reports and the logic of the program. When Merchant is installed, it can be extended or modified to conform to a user's requirements. When those requirements change next year, it can be modified again.
$1,000 retail
The Merchant Group; 2847 W. Palmer St.; Chicago, IL 60647; 312-227-7462, 800-500-7220 or 312-288-1239 (fax)

■ **Modafinity**
Retail catalog system
Macintosh Quadra; 16 MB of RAM.

ModaCAD's Modafinity is an interactive revolutionary retail catalog system that simulates manufacturers' furniture and other home furnishing items. Any item can be seen, including bedding, carpeting, interiors, flooring, etc., with realistic actual materials, including hard or soft surfaces. Furniture is upholstered with any variety of available fabrics and draped in 3-D detail. Failsafe order processing features may be networked to other order and inventory control systems. Search and retrieval locates merchandise with full availability, pricing and other options and supports bar-code input. Full media support for live-action video, sound and music is provided.
$4,000 to $6,000 retail
ModaCAD, Inc.; 1954 Cotner Ave.; Los Angeles, CA 90025; 310-312-6632 or 310-444-9577 (fax)

■ **Order Processing**
Processes telephone and catalog orders
Macintosh Plus or larger (68030 processor recommended); 2 MB of RAM; System 6.0 or later (System 7.1 recommended); hard disk drive.

Order processing is for businesses that accept primarily mail or telephone catalog orders. A Catalog Lookup file contains all catalog items with associated information, including a picture of the item. A Customer Lookup file keeps tabs on all customers and provides automatic data entry into the main program. An Employee Lookup file keeps tabs on employees and provides automatic data entry into the main program. An Order Processing file contains Daily, Weekly, Monthly and Yearly Summary Reports that can be generated and printed for Sales and Customer activity. Find selections allows listing of data records by set criteria. Users can select other sort sequences and can design a company header and add it to the letters and reports. A sample order form and return merchandise form can be printed, as well as invoices, pick lists, packing lists and shipping labels.
$149.95 retail

POS Register
Point-of-sale, accounting and inventory control system
Macintosh Plus or larger; hard disk drive; ImageWriter II.

POS Register is a fully integrated point-of-sale, order entry and inventory control system designed for use in wholesale or retail businesses. Point-of-sale functions include: order entry, back order tracking and sales invoicing with automatic calculation of customer or quantity discount prices; adjustment of inventory quantities and calculation of salesperson commissions; sales invoice types; customer ledgers, customer comments, Accounts Receivable, serial numbered item tracking, finance charges and gift certificate sales; and more. Purchase functions include: Accounts Payable; Vendor Ledgers; Vendor Comments; Purchase Orders; and Purchase Receipts. The Inventory Control System provides fields to record the item description, vendor, vendor part number, taxable item indicator, serial numbered item indicator, warranty period, color, size, weight, style, current quantity on hand and more. The General Ledger is a double-entry, accrual accounting system that is fully integrated with all other portions of POS Register.

POSIM•Express
Point-of-sale inventory management
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

POSIM•Express is designed specifically for high-speed, high-volume point-of-sale inventory management operations. Its unique check-out features are designed to expedite customer processing by using bar-code scanning and programmable speed keys. Cashiers will prefer its simplicity and ease of use as it eliminates the memorization of codes and provides quick, online price and customer look up. Standard reports provide management tools for retailers, such as "Z" tapes, register total reports, reorder lists and sales usage. The Define a Report feature permits users to design reports to meet their needs, in their format.

POSIM•Lite
Point-of-sale inventory management
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

POSIM•Lite provides the basic requirements to manage smaller retail operations. Its complete set of inventory management features creates a total solution for the retailer who is looking to control inventory while increasing productivity at a minimal price. Lite automatically looks up prices, applies discounts, calculates multiple level sales tax and dials a user's credit card service for authorization. Refunds, exchanges and voids are processed quickly. The complete point of sale transaction is fast and simple. Users will be able to control inventory, analyze margin and sales in ways that are uniquely tailored to the demands of their retail business.
$695 to $995 retail; single user to multiuser
Ensign Systems; 26 N. Main, Ste. B; Layton, UT 84041; 801-546-1616 or 801-546-6490 (fax)

POSIM•Premier
Point-of-sale inventory management
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

POSIM•Premier provides complete point of sale management and inventory tracking. Up to 32 Macintoshes may be used as sales points with AppleShare or POSIM Share. An intuitive Mac interface allows anyone to quickly learn the system. POSIM•Premier features automated entry of sales and purchase data via bar-code scanners and QuicKeys. Information is instantly routed to comprehensive inventory and customer records. Invoices, statements, purchase orders and bar-code labels are easily generated. The program allows for back order processing. It interfaces to various receipt printers, bar-code printers, cash drawers and VeriFone credit card system, and features seamless integration with accounting packages. POSIM•Premier features accurate reporting via standard predefined reports and a powerful user-definable report generator. Reports provide key executive decision making information, such as inventory history, return on investment for inventory items, seasonal trends, sales history, valuable customer information, etc.

Retail Engine Accounting
Accounting system
Macintosh Plus or larger; hard disk drive.

Retail Engine Accounting is a completely integrated accounting system for the Retail Engine apparel point of sale software family. Retail Engine Accounting maintains four journals: Point of Sale, Cash Disbursements, Purchases Journal and General Journal. It automatically updates the General Ledger from the entries made in these four journals. The Point of Sale Journal is imported from Retail Engine Manager. Vendor invoices are entered in the Purchases Journal and are tracked individually until they are paid. The Cash Disbursements Journal can handle multiple checking accounts and relate checks to vendor's invoices, as well as employee payroll. All checks entered in this journal can be printed. Other transactions are entered in the General Journal. Retail Engine Accounting prints consolidated and comparative financial statements.

Retail Engine Point Of Sale
Point of sale/management/accounting system for apparel retailers
Macintosh Plus or larger; hard disk drive.

Retail Engine is a complete software system for apparel retailers with a single location or many. A Macintosh on the sales counter is used to enter sales and produce sales receipts. Retail Engine Sales Recorder is also available for a back office setting. The system handles sales on account, on deposit, resale, gift certificates, payments, voids and multiple sales tax jurisdictions. Report searches and sorts are user defined and provide information for any one store or all stores consolidated. Reports include Sales and Stock, Flash Report and Open To Buy. Grids are used to enter and display inventory and sizes. A single size chart handles up to 40 sizes. Bar-code hang tags with SKUs are printed by the system to mark merchandise. UPC is also supported. A bar-code reader and cash drawer are available. A complete General Ledger accounting package is also available.
$1,895 retail

Video Rental Management Premiere
Manages video rental store operations
Macintosh Plus or larger; hard disk drive; ImageWriter.

Video Rental Management Premiere allows video rental store owners and employees to track and manage the rental and sales of videocassettes. It also helps protect videos from being stolen before they are rented. During peak periods, the program allows more customers to be served in less time, and overdue movie returns that used to go undetected become a source of previously lost revenue.
$995 retail; demo disk available
Graftech; 99 Jacklin Ct.; Milpitas, CA 95035; 408-945-6585

The Video Rental Manager
Video store management
Macintosh Plus or larger; 20 MB hard disk drive; ImageWriter II.

The Video Rental Manager provides for effective management of a video rental operation. Clerks add new members/movies and enter reservations, rentals or returns. The system does the rest: uses defaults to eliminate data entry where possible; provides point-of-sale customer receipts; maintains daily cash flow totals; special pricing/promotion features; and allows sale of movies from stock with option of charging any of three different tax rates. A pull-down menu allows users to print any of the many reports or handouts at any time. User passwords ensure security and confidentiality. Flexibility has been built in to permit user choices in managing a store. Multiuser capability and use of bar codes is optional.
$595 retail; dealer/volume discounts and multiuser version available
The Computer Junction, Inc.; 214 Elm; Washington, MO 63090; 314-239-7544 or 314-239-3962 (fax)

The Video Store Manager
Video store management
Macintosh Plus or larger; 1 MB of RAM; 40 MB hard disk drive; System 6.0.5 or later.

The Video Store Manager is designed to automate all phases of video store management. The system incorporates a modular design that separates the day-to-day operations, which include adding new films and customers, renting and selling films and the reservation system, from the password protected, accounting, reporting and film and customer management operations. Where possible, defaults minimize data entry. Customer and store receipts can be printed on both plain paper and special two-part forms. A variety of pricing schemes are provided, along with up to eight different classes of members.

Vertical Markets/Sales

Biz Basics EZ For FileMaker Pro
11 interactive FileMaker Pro business templates
Macintosh SE or larger; hard disk drive; FileMaker Pro 2.0 or later; System 6.0.5 or later.

Biz Basics EZ is a series of 11 interactive FileMaker Pro templates that help companies easily manage their sales accounting, customers, vendors, invoicing, products and services, inventory, purchase orders and employees. EZ runs multiple companies, departments or locations from a single set of files. It features inventory control; project tracking; provides customized buttons, "EZ Entry" screens, powerful lookups and pop-up menus to allow quick data entry. This colorful template set also includes 60 professional reports, including Accounts Receivable, Accounts Payable, Aging, Customer History, sales and inventory reports, statements, late notices, commission statements, mailing labels, mail merged letter layouts, easy fax sheets, follow-up reports, phone/fax logs and more. A HomeBase Command Center makes it simple to navigate through this unlocked template set. Biz Basics EZ functions the same as Biz Basics Pro except shipping manifest and rates have been removed, as well as a few of the more advanced features found only in the Pro version. EZ is designed for the product or service company who does not need detailed shipping features, custom payment terms or component level inventory. This version is geared more toward service-oriented businesses, and is also Canadian GST/PST savvy. It is fully integrated with EZ Letterz and EZ Dialer+.

The Buyer's Mind
Provides a message-building formula to gain customer attention and develop a compelling reason to buy from a user rather than a user's competitors
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.5 or later.

The Buyer's Mind is software that takes a user inside the buyer's consciousness to build a buyer-oriented, advanced selling strategy. Using a user's expertise, a user develops tactical moves to pinpoint what a buyer wants and how to respond. Users learn to avoid common sales-killing errors that experienced salespeople make everyday. Once users have scripted their advanced selling strategy, a custom manual containing a user's tactics and an overview of how to use them is printed out. With practice, users master the mechanics to handle nearly every selling situation gracefully, tactfully and successfully. The Buyer's Mind includes textbook, disks, desk reference card and installation instructions. It is available for the Macintosh and DOS PCs running Windows 3 or later.

The Vass Company; 6855 Heathfield Dr.; Atlanta, GA 30328; 404-252-2838, 800-424-8277 or 404-250-0148

Cat Extractor
Transfers data from C•A•T III data files into Contact Ease
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later.

Cat Extractor is a utility for easily transferring data from C•A•T III data files into Contact Ease. It exports all C•A•T fields, including user fields, all account and contact notes and (optionally) a list of documents for each contact. A simple interface and step-by-step instructions make it easy to get out of C•A•T.
$49.95 retail; provided free to Contact Ease users
WestWare, Inc.; 4903 Morena Blvd., Ste. 1212; San Diego, CA 92117; 800-869-0871, 619-274-5053 or 619-274-5055 (fax)

Contact Ease
Sales and marketing follow-up program
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later.

Contact Ease automates contact follow up. It supports target marketing using direct mail and telemarketing, and also tracks personal activity items. By entering follow-up "plans," the program can automatically generate all the right letters and activity items at the right time with one mouse click. A built-in word processor lets users apply fonts, sizes and styles character by character. Graphics can be placed anywhere in a document. Envelopes are printed with U.S.P.S. Postnet bar codes. The unique CyberSwap feature lets users take data along on a portable computer, and then easily merge changes into the office data file. Contact Ease provides a contact list for quickly finding the right person. Other features include: dials the phone; logs calls; prints mailing labels; 20 user-defined custom fields; and text import and export.

Control Classic 2.0
Professional sales automation
Macintosh Classic II or larger; 4 MB of RAM; hard disk drive.

Control Classic is a complete professional sales automation system for anyone who needs to manage business contacts and follow-up activities. By integrating a powerful relational database of Customers (companies) and Contacts (multiple people within a company) with word processing, a calendar and things-to-do list, sales leads and prospects never fall "through the cracks." Sales leads can be assigned to a pre-defined "Process," which consists of a series of scheduled follow-up letters and phone calls. Once assigned to a Process, Classic takes over and makes sure follow-up letters go out on time and the appropriate reminders appear in the Things To Do list each day. There is no limit to the number of different Processes that can be managed at once and no limit to the number of Steps in a Process. Other features include: unlimited keywords per customer or contact; keyword searching; find and replace on keywords; search on any field or any combination of fields; 20 user-defined fields and four user-defined checkbox (boolean) fields; global record updating with access to an extensive command language; ASCII import and export; marketing effort response analysis; auto-phone dialing; custom reports and labels; envelope printing with company logo; duplicate record checking; automatic alpha field formatting; Zip code verification of city, state, area code and time zone; automatic faxing of messages using FaxSTF software and fax modem; access to GeoQuery 4.0 via Apple Events allows data to be viewed and manipulated geographically; full-featured word processing and mail merge capabilities; password access system; and batch printing of letters, envelopes, faxes, memos and labels.
$349 retail; single user (multiuser available)

CorNet ETM
Designs sales force automation programs
Macintosh PowerBook.

CorNet produces applications that increase the speed and accuracy with which salespeople communicate with management, each other and their clients — tools that translate into greater productivity and increase sales. CorNet stands alone in its ability to design Sales Force Automation programs that integrate tightly with clients' existing information infrastructure. The foundation of the system, Electronic Territory Management (ETM), is a series of modules, such as Ad Hoc Analysis, Inventory and Account Maintenance, that can all be customized to suit a company's requirements. Users choose the modules that match the sales and marketing profile of their company. Distribution of data and maintenance of a national database are carried out by CorNet during the Pilot and Rollout. After which CorNet will continue to manage the system or manage a transfer of technology. CorNet makes available a full array of maintenance and support services, ranging from hardware repair to a dedicated telephone helpline.

■ **Data-Date**
Maintains a client/customer file
Macintosh Plus or larger; FileMaker Pro runtime.

Data-Date is a calendar and client/customer file that combines four useful databases into a single program: Client File, Letter Look-Up, Year At A Glance and Client Tracking. The Client File feature records appointment times, stores background information on each name, from addresses and phone numbers to necessary facts pertaining to the appointment, and includes label layout and forms for letters to speed up routine correspondence. Letter Look-Up files previous correspondence for quick reference. Year At A Glance provides an easy way to schedule vacations and important meetings. Client Tracking not only lists prospects and referrals, but records current status and any follow-up action.

Direct Mail
Mailing list management
Macintosh 512K or larger.

Direct Mail allows users to enter mailing lists under an unlimited number of categories. It prints mailing, shipping and filing labels and merges them into letters. Users can then print correspondence to all or any portion of the list. The program will print labels in four columns on a page and will print a list of postal and Zip codes. Direct Mail can also be customized to support color printing on an ImageWriter II.
$295 retail; single user with Omnis 3 Plus Runtime

Down To Business 3.0
Seven business tools
Macintosh Plus or larger; hard disk drive; FileMaker Pro 2.0.

Down To Business includes the standard features users would expect to find in small business software and more — quick and detailed invoicing; purchasing, receivables and payables management; inventory and order control; customer data and contact tracking; price lists; mailing lists and customer and employee sales reports. Multiple addresses per customer, prepayments and credits on orders are provided for, along with an alert feature that will inform a sales staff of a problem or potential problem with a particular customer when their next order is placed. DTB handles a user's sales effort by allowing users to keep precise track of activities while reminding a salesperson of their next scheduled sales call. DTB has the ability to handle all sorts of tax situations, from non-taxable items to non-taxable customers, from single state to multistate tax collection. All of these reports can be easily modified to handle complex city/county/state tax calculations.

■ **EZ Dialer+ For FileMaker Pro**
Auto-dialer
Macintosh SE or larger; 8 MB of RAM; System 7.0 or later; hard disk drive.

EZ Dialer+ is a stand-alone utility that lets any FileMaker Pro database dial any phone number automatically. EZ Dialer+ will also work with other software that can send an AppleEvent. Users may set their Preferences to dial through the Macintosh's modem or speaker and select the port they wish to use. This affordable tool is easy to set up and includes a FileMaker Help Database with example scripts and simple step-by-step instructions on how to link it with their FileMaker Pro databases. EZ Dialer knows when to dial "1" first and will ignore area codes that match the users and dial those that don't, which insures accuracy and avoids dialing the wrong number. Users may disable call waiting and dial an outside line automatically as part of their preferences. Using FileMaker Pro scripts, users may create various keyboard commands for dialing different phone fields. EZ Dialer+ also includes pop-up menus that let users change their Chooser and printer name right from the Dialer screen, without having to open the Chooser.
$39 retail

EZ Letterz For FileMaker Pro
Stores and manages all correspondence in a single FileMaker Pro file and "auto-merges" contact names/addresses with any letter, fax, memo and more
Macintosh Plus or larger; hard disk drive; FileMaker Pro 2.0 or later; System 6.0.5 or later.

EZ Letterz provides a unique way of creating, storing and merging letters, fax cover sheets, office memos and more, while automatically updating an Activity Log for each correspondence sent. EZ Letterz introduces a new concept in letter writing that lets users increase the speed and efficiency of managing correspondence. All preformatted correspondence is created and stored inside one library file of letters. FileMaker Pro users may now add a new record for each new correspondence and no longer need to add a new layout to create a new letter. Users are only responsible for typing in the actual body and its title into a database of letters. A letter, fax sheet or memo may be formatted automatically and merged with contact and address information. Print option buttons include preformatted layouts for three standard styles of business letters, one personal letter format, a fax message cover sheet, an interoffice memo form, #10 envelopes, popular Avery mailing labels and an editorial layout, which handles reports,

TELEMAGIC – CLIENT/SALES MANAGEMENT DATABASE
MAXSOLUTIONS ---------- (619) 431-7321

proposals, agreements, press releases and more. All files ship totally unlocked, so company logos may be added and letter formats adjusted. A Long List button offers the convenience of a one-list lookup of a letter library, which may be sorted multiple ways at the click of a button. The use of Pick Lists allows users to quickly choose the contact(s) they wish to send correspondence to. EZ Letterz also ships preset to work with Biz Basics, Down to Business and even the sample templates that ship with FileMaker Pro. It ships fully integrated for EZ Dialer+.
$89 retail; single-user; 10 packs available (demo version is located in the Claris section of America Online)
Working Solutionz Software; 2191 Rosecrans St.; Simi Valley, CA 93065; 805-522-2170 or 805-527-7787 (fax)

■ **EZ Letterz For Workgroups**
Provides workgroup correspondence library and log
Macintosh SE or larger; 1 MB of RAM; FileMaker Pro 2.0 or later; System 6.0.5 or later; hard disk drive.

EZ Letterz for Workgroups provides a unique way for office workgroups to create, store, merge and manage letters, fax cover sheets, office memos, editorial and more, while automatically updating an "Activity Log" for each correspondence sent. EZ Letterz introduces a new concept in letter writing that increases the speed and efficiency of managing a workgroup's use of common documents, while allowing the privacy of personal correspondence. It is unique from the everyday word processor in that all correspondence is created and stored inside one library file of letters. The "Contacts.FM" and "GroupDoc.FM" files are shared over the network, while each group member maintains their own private letter library right on their hard drive. Users may "post" or "get" common documents to/from the server, modify and repost them for the benefit of the group via simple buttons. All templates ship totally unlocked so company logos may be added and letter formats may be adjusted to fit the company standards. A favorite feature is the Activity Log that automatically logs each letter title, who sent it, project name (or RE:) and the date and time each correspondence was printed or sent. It is also fully compatible with Claris Corp.'s FileMaker Pro Server product.
$499 retail; per workgroup
Working Solutionz Software; 2191 Rosecrans St.; Simi Valley, CA 93065; 805-522-2170 or 805-527-7787 (fax)

■ **Invoices And Inventory**
Inventory management
Macintosh Plus or larger (68030 processor recommended); 2 MB of RAM; System 6.0 or later (System 7.1 recommended); hard disk drive.

Invoices & Inventory is a two part program. The Inventory file contains all the information about users' products. A catalog of inventory can be created. Item information with a photograph, supplier information, reorder information and back order information can be entered, as well as low inventory, back order, inventory list and assets reports generated. When a sale is made, the invoices file is used. The part number is entered and information about the part is looked up and put into the invoice, including the present quantity in stock (QTY in stock). Entering QTY sold causes the total cost to be calculated. When all sale items are complete, a sales tax box can be checked and if Yes, the appropriate sales tax is figured. Shipping charges are added and the total due is figured. Method of payment information is entered and after item is sold, selecting a box will update the inventory file.
$99.95 retail
HPO Soft; 7812 W. Clayton Dr.; Phoenix, AZ 85033; 602-848-9758 or 602-849-5889 (fax)

Leads!
Sales lead management
Macintosh Classic or larger; 3 MB of RAM; hard disk drive; LaserWriter recommended.

Leads! is a family of sales automation applications that provide an integrated, company-wide approach to sales automation. Leads! provides a comprehensive set of contact management tools for salespeople, complete with follow-up management, integrated calendar, word processing and label printing capabilities. Leads! automates the process of lead generation, lead distribution/consolidation and literature fulfillment a local or regional levels. For sales and marketing managers, Leads! provides a variety of management level reporting and the ability to target prospects for direct mail/marketing campaigns. Leads! allows users to associate sales contracts with specific accounts. Each account record can have an unlimited number of related contacts, and accounts can be organized in simple or complex hierarchies. Contact and account records can also have an unlimited number of associated "deals" or sales opportunities. A deal consists of general qualification information, such as amount, timeframe and probability. An unlimited number of line items can be added to the deal by simply selecting a product from an integrated list, entering a quantity and specifying a discount percentage. Forecast and funnel reports are automated. Using Leads! Transfer feature, the flow of all sales information is automated throughout the sales organization — from corporate, to sales offices, to sales reps — and back again. The result? Sales reps receive the hottest leads for immediate followup, while managers have up-to-the-minute forecast and funnel information across the entire sales organization. Both single and multiuser version are available. Each version can be used alone or combined together to provide an integrated, company-wide sales management solution for everyone from individual salespeople to large, multilevel sales organizations.
$695-$1,995 retail; Leads! single user
$5,495 and up retail; Leads! multiuser starting at three users

Market Extractor
Transfers data from Market Master data files into Contact Ease
Macintosh Plus or larger; hard disk drive; System 6.0.2 or later; Market Master and Contact Ease.

Market Extractor is a utility for easily transferring data from Market Master data files into Contact Ease. It transfers all Market Master fields, with the exception of Territories, including all notes, user fields, code fields, history items and phone scripts. In addition, the Market Master "Strategy" is recreated in Contact Ease and each name is re-attached to its proper step, so there will be no interruption to the automated follow up. A simple interface and step-by-step instructions make it easy to get out of Market Master.
$49.95 retail; free to Contact Ease users
WestWare, Inc.; 4903 Morena Blvd., Ste. 1212; San Diego, CA 92117; 800-869-0871, 619-274-5053 or 619-274-5055 (fax)

Market Master For The Macintosh Version 3.5
Sales and marketing follow-up software
Macintosh Plus or larger; 1.5 MB of RAM (more recommended); hard disk drive; ImageWriter or LaserWriter.

Market Master automates routine sales follow up so users can develop every lead to its fullest potential, have more time to focus on what's "hot" and increase sales by 20 percent or more. Automating the process keeps users on top of every lead and makes sure all are followed up properly. With more time for actual selling and relief from tedious paperwork, users become more productive and successful. Market Master gives users a competitive advantage by solving some of the biggest problems encountered by salespeople everywhere — not enough time for thorough and consistent follow up, too much clerical work for other departments and important leads falling through the cracks. Market Master is a fully-automated system. Users can prepare all correspondence with a click; update all the leads for their next action with another click; access all the information on a caller with a few letters of their name or company and update their file with a keystroke or two; automatically gather information on the results of their sales campaign; and even print out their periodic activity reports at a touch of the mouse. Market Master Remote lets users work with their leads on the road, then swap data with the home Market Master to update information in both directions. It is ideal for PowerBooks and is included at no charge with every copy of Market Master.
$395 retail
Breakthrough Productions; 210 Park Ave.; Nevada City, CA 95959; 916-265-0911 or 916-265-8036 (fax)

Market Master Manager Version 3.5
Sales and marketing follow-up software; standardizes the sales approach for an entire office
Macintosh Plus or larger; 1.5 MB of RAM (more recommended); hard disk drive.

Market Master Manager automates routine sales follow up so users can develop every lead to its fullest potential, have more time to focus on what's "hot" and increase sales by 20 percent or more. Automating the process keeps the sales force on top of every lead and makes sure all leads are followed up properly. With more time for actual selling and relief from tedious paperwork, it assures higher productivity and more success. Market Master Manager gives users a competitive advantage. It gives a sales manager control over salespeople's activities, assures thorough and consistent follow up and protects leads from personnel turnover. Results Analysis shows which sales reps get the best results and provides an early warning system for those who need extra help. The exclusive "Past Due" report makes sure nothing falls through the cracks. Other reports can show which lead sources get the best results, which sales strategies work best and just about anything else users would want to know. Market Master Remote lets field sales reps work with their leads on the road, then swap data with the home office to update information in both directions. It is ideal for PowerBook users, can be distributed to the whole sales force and is included at no charge with every copy of Market Master Manager.
$595 retail; up to four salespeople
$895 retail; up to 10 salespeople
$1,295 retail; up to 20 salespeople
$1,995 retail; unlimited salespeople

OrderTrak
Organizes manufacturers representatives and sales organizations by keeping accurate records and reports on orders and accounts
Macintosh II family or larger.

OrderTrak tracks: orders, backorders/multiple backorders, invoices, commissions, potential re-orders, SKU's monthly sales by individual representative and/or manufacturer, where each order was written (salesman, show, customer, manufacturer), new customers, charge backs from manufacturers and commission advances to salesperson. OrderTrak can create reports on monthly orders to be shipped, backorders, commissions not paid, backorder commissions not paid, salesman commission, salesman backorder commission, date to date sales, tickler file (used to identify potential re-orders), commission analysis, sales breakdown by month, breakdown of sales by manufacturer, breakdown of sales by account, monthly bookings, open order analysis, manufacturer analysis, customer analysis and year-to-date sales by account. An additional file that works with OrderTrak is the Address File, which stores accounts' address and credit information, as well as each manufacturer's information. This file also has contact management support. OrderTrak Aid, gives analysis capabilities to OrderTrak by breaking sales down by individual SKUs so that quantities can be examined for each manufacturer, account, salesman or month.

POFCO Order Entry System
Designed for contract furniture dealers/distributors
Macintosh Plus or larger.

The POFCO Order Entry System is a comprehensive order processing system from either an inventory or non-inventory basis. It allows users to create a worksheet containing all of the necessary information needed to produce client quotations, client acknowledgements and client invoices. It also produces (from the worksheet) purchase orders to multiple vendors, as well as warehouse receiving documentation and client delivery documentation. Financial reporting features include: monthly sales by account, gross profit, aged trial balance by account and commission reporting. It requires no special forms (prints on plain white paper). All documents are set for #10 window envelopes.

■ **QuoteMaster**
PowerBook-based quotation system
Macintosh PowerBook; 8 MB of RAM; System 7.1 or later.

QuoteMaster is a full-function product quotation system designed to be used by a field sales person. It is written in ACI's 4th Dimension relational database and is capable of handling the most complex types of products involving hundreds to thousands of product combinations. QuoteMaster is designed to assist the field sales person by looking up product codes and actually prevents the preparation of a sales quotation with incompatible products. QuoteMaster maintains records of all active leads that the sales representative is working on and outputs to a printer or fax/modem a final quotation for presentation to a sales prospect. Product customization services are available.

The Sales Center
Automated sales administrative center
Macintosh PowerBook; 4 MB of RAM.

The Sales Center is a Macintosh PowerBook software package for providing automation capabilities to salespeople who require online technical assistance, ordering information and a completely personalized sales reporting center. It automates every aspect of the sales function, including the customized development of presentation slides for clients. Written in SuperCard, The Sales Center incorporates the following modules: Price Lists, Configurator (available in customized version only), Sales Order Form, Account File, Expense Forms and Sales Reports, Technical File, Marketing Presentation Generator and Desk Items. Accompanied by an easy-to-follow manual, the package customizes standard windows with company name, salesperson's name, as well as commission earnings, etc. As a standard package, The Sales Center is priced for a single-user license. For companies who require more than 50 licenses, the Group will customize the formats, price lists, reports, slide shows, etc., load the data and provide quarterly updates to the users.

Sales Synergy
Sales force automation software
Macintosh with 68030 processor or larger, including PowerBook family; Ingres, Oracle or Sybase server; System 7.0 or later.

Sales Synergy is software that provides companies a foundation for developing fully integrated sales and marketing systems. For the field-based representative, it is a relational database comprised of four core modules: Accounts, Contacts, Sales Opportunities and Activities. It features standard and custom reporting. Sales Synergy is comprised of two inter-related pieces: field software that runs on sales representatives' PowerBooks to provide productivity and sales tracking functions, and the Metropolis Data Distribution Engine, which runs on a central corporate computer in conjunction with and SQL relational database management system, such as Ingres, Oracle or Sybase. The engine provides information consolidation, distribution and synchronization services and can be modified to meet companies' unique requirements. Metropolis Software's team of SFA specialists can assist and support organizations throughout all phases of planning and implementation.
$50,000 starting price retail; price depends on number of users, modules and necessary level of customization and support
Metropolis Software, Inc.; 100 Hamilton Ave., Ste. 100; Palo Alto, CA 94301; 415-462-2200 or 415-617-5978 (fax)

Salesbase 2.0
Field automation
Macintosh Centris 610 or larger, including PowerBook 180 or Duo 230; Oracle or Sybase server; System 7.1 or later.

Salesbase is an integrated sales automation solution for midsize to large corporate sales organizations. It is a relational database comprised of four core sections: Contacts, Accounts, Projects and opportunities. Salesbase supports standard and custom reporting. Salesbase can be implemented as a single or distributed database. "Data Motion" technology sets up a distributed database using Salesbase. Data Motion keeps the field information flowing throughout an organization with the timely and accurate exchange of data between the field and corporate headquarters. It ensures every user access to the same information. Salesbase offers the ability to easily import and export information. Sierra Software also offers advanced customization services for Salesbase clients.
$1,400 per user retail
Sierra Software Innovations; 923 Tahoe Blvd., Ste. 102; Incline Village, NV 89451; 702-832-0300, 800-621-0631 or 702-832-7753 (fax)

SalesKit for Macintosh
Integrated sales information delivery system
Macintosh with 68030 or larger processor, including PowerBook 165c; 8 MB of RAM; 60 MB hard disk drive.

SalesKit Software provides completely integrated sales information delivery systems to field sales and service organizations needing a distributed database. SalesKit provides flexibility and simplicity as its primary benefits; flexibility in the final user interface, back-end database, remote communications vehicle and operating platform (Windows and/or Mac); simplicity in its use and modification. SalesKit's unique design allows for the system to be quickly and completely modified without needing to modify the source code and without SalesKit Software Corporation's help or additional expense. SalesKit is available on the Microsoft Windows, Macintosh and MS-DOS operating platforms, and is sold primarily to sales forces with more than 35 or more field representatives. A smaller scale system for the middle market (10 to 35 users) should be available later in 1994 (September).
$1,000 starting price retail
SalesKit Software Corp.; 10845 Olive Blvd., Ste. 190; St. Louis, MO 63141; 314-432-7205, 800-779-7205 or 314-567-0439 (fax)

SalesPower
Tracks sales contacts and activity, performance of salespeople; provides extensive sales reporting; creates mailing labels and user-definable reports
Macintosh Classic or larger; 4 MB of RAM; hard disk drive.

SalesPower is intended for professional salespeople who need to track and manage the details of their leads and prospects. While salespeople conduct the usual day to day activities with the prospects, the transactions are also recorded using this program. The program will generate reminders for follow-up dates and other due dates for actions that were promised. In addition, a daily and weekly appointment schedule is created for the salespeople. The software tracks the information on each salesperson and the sales managers. At any time, users can get a detailed report providing a break down of the prospects by their current status. SalesPower tracks all of the information related to the prospect, company or employer, full history of contact, the financial readiness and other ratings, products of interest to the prospect, their existing products, information sent, personal interests and attributes, family details, etc. A general rating can be given to each lead to reflect the level of interest shown in a user's products. The program generates mailing labels and mailing lists by Zip code, city, state and area code. It also generates 30-, 60- and 90-day sales forecasts and detailed reports on the effectiveness of lead sources.
$545 retail; per user (dealer inquiries accepted)
$695 retail; with built-in word processor
Stanford Business Systems, Inc.; 400 Corporate Pointe, Ste. 415; Culver City, CA 90230; 310-215-8444 or 310-417-5364 (fax)

Small Business Partner 4.0
Eleven business tools
Macintosh Plus or larger; hard disk drive; FileMaker Pro 2.0.

Small Business Partner is a generic management information system that helps users with the basics of selling, buying, producing and managing. Because of the flexible power of FileMaker Pro, users can do these tasks and analyze their businesses in more ways than ever thought possible. SBP provides both new and current FileMaker Pro users with a solid generic base that can be quickly adapted to any business. SBP is made up of 11 powerful, interactive files that can be used in any way desired. These templates come with a unique tutorial approach that will qualify, familiarize and train new employees.
$195 retail
Packer Software; 43 Barnes Rd.; Stonington, CT 06378; 203-535-2666, 800-782-9955 or 203-535-0817 (fax)

SoftSell
Sales automation software
Macintosh Plus or larger, including PowerBook; hard disk drive.

SoftSell is an easy-to-learn and easy-to-use program designed specifically for professional salespeople. It gives salespeople five additional hours of selling time per week, while requiring only 15 minutes to learn. SoftSell is also useful to other professionals who have a high degree of sales in their work, including executives, managers, buyers, consultants, attorneys, project managers, etc. SoftSell is easy to learn because all commands are listed in pull-down menus that are in the terms that salespeople use. Commands are activated by pointing at them, so there is no need to memorize and type commands. SoftSell is also easy to learn because of its step-by-step illustrated manual. SoftSell acts as an "electronic secretary," organizing a salesperson and automating their administrative tasks. By reminding a salesperson when to call customers, the program assures that no customer requests or deadlines are ever missed. The software auto-dials telephone numbers; shows pop-up sales scripts and pitches; stores product information; keeps customer to-do lists; maintains a complete history of customer conversations and customer activity; instantly finds information on past conversations by a word, phrase or date; creates form letters and form invoices; does mail merge; addresses envelopes and labels; generates sales reports and forecasts for management; and prints address books. SoftSell also creates formulas for mailing form letters, allowing users, for example, to send an invitation for a Chicago seminar to only those customers with the title "buyer" in the city of Chicago.

SuperRep Business Management System
Commission tracking and business management software for manufacturer representatives and rep agencies
Macintosh LC or larger; hard disk drive; printer; backup system is recommended.

SuperRep is a complete, multiuser business management system for manufacturer representatives. The program manages multiple customers, manufacturers and agents. The tickle card control system manages customer and prospect tickle dates and generates daily, weekly, monthly and yearly action item reports. Other features include in-depth sales analysis, order tracking, comprehensive accounts receivable and automated links between purchase orders and invoices. Purchase orders and invoices are available either by line-item with a catalog pricing module or by totals

TELEMAGIC – CLIENT/SALES MANAGEMENT DATABASE
MAXSOLUTIONS ---------- (619) 431-7321

only. Either invoicing system allows multiple orders to be shipped on one invoice and multiple invoices to be shipped on a single order. Each invoice can have multiple commission splits. Cash receipts are automatically applied to outstanding invoices as payments for earned commissions. SuperRep provides three levels of detailed sales and commission analysis, catalog item sales breakdown and analysis, history recaps, and generates mailing labels and Rolodex cards. The system provides more than 60 different reports, such as agent sales breakdown by customer, customer sales breakdown by manufacturer, unpaid invoice breakdown and more. SuperRep is available in two levels.

■ **Tactician Selling Machine**
Improves sales and service operations productivity
Macintosh II or larger; math coprocessor; 8 MB of RAM; 25 MB of free hard disk space; 13-inch color monitor; System 6.0.3 or later.

Tactician Selling Machine improves the productivity of sales and service operations by reducing "windshield time," balancing workloads and providing better information for decisions. The system enables both manual and automated territory redistricting. It includes all functionality and data of Tactician Buttons, plus TOTEM, the sales territory optimization system that uses drive time or distance to optimize territories for efficiency and user-selected variables (such as workload or sales potential) to balance territories and minimize cost. It also includes Data Warehouse for building extremely large, high-speed databases that can be accessed via any Tactician system.

Territory Manager
Created for outside sales reps whose automobile is also their office
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.4 or later.

Territory Manager is a unique software package created specifically for the outside sales rep whose automobile is also his/her office. Designed for the non-computer user, the program's point-and-click interface allows reps to concentrate on their sales, not their computer. Entering a sales call takes about a minute and provides the sales rep with an automatic reminder for followup. The built-in schedule puts users in front of the right prospect at the right time, and a missed call report keeps any lead from falling through the cracks. Other features include: automatic creation of sales reports; printing of callbacks and appointments for any date range; fax memos; and sales letters. A powerful sales analysis tool provides feedback on sales effectiveness and indicates where efforts should bring the greatest sales increase, and a complete forecasting module makes it easy for the user to track and weight pending sales opportunities. This product is ideal for use on the road with a PowerBook — or users can do the data entry at the end of the sales day — about 15 minutes per day is all it takes. The program is System 7 compatible and customization is available.
$295 retail

theCustomer
Operations software
Macintosh Plus or larger; 4 MB of RAM; hard disk drive; System 6.0 or later.

theCustomer focuses a user's efforts on profitable activities, providing more time for customers. The software automates time-consuming activities, such as creating proposals, processing orders, managing back-orders, shipping invoices, sending letters, managing receivables, purchasing components, managing bills of materials and organizing production. Sales and marketing features include: contact management, commissions and sales quota tracking, split commission management, proposals, auto dialing, mail merges and letters, telemarketing scripts, tracking revenues by marketing efforts, lead worksheets and market profiles of customers and prospects. Order entry/invoicing features: automatic freight cost estimation, audio alerts for credit risks and back-ordered products, back-order management and prints various order and invoice forms, pick lists, bill of lading, COD and shipping labels. Inventory includes: purchase orders, multilevel bill of material capabilities, inventory management (real time or by batch), product sales performance reports, average cost inventory value maintained, critical inventory reports, production and usage reports. Customer service includes: office mail system, documents customer concerns, schedules action items, records and reports on recurring events and controls return material authorizations. Many reports and a calendar are also provided.

Vertical Markets/Science

AcqKnowledge 3.0
Data acquisition and analysis software
Macintosh Classic or larger.

AcqKnowledge is an interactive waveform data acquisition and analysis program. By incorporating fast, on-screen controls, users can instantly view, measure, analyze and transform data. Features include x-y plotting, digital filtering, auto correlation, peak detection, FFT (forward and inverse), integration and differentiation and a range of standard mathematical functions. Full editing functions, on-screen time and amplitude cursors and waveform arithmetic can be performed with multiple windows. On-screen markers and a flexible journal allows data to be easily annotated. It creates high-resolution, publication-quality graphs. AcqKnowledge will load and save text and binary files with up to 60 waveforms per graph window in color. It works with BIOPAC data acquisition products. Math coprocessor support is available, and 17-digit precision is always present.
Included with the MP 100 WS Data acquisition system.
BIOPAC Systems, Inc.; 275 Orange Ave., Ste. E; Goleta, CA 93117; 805-967-6615 or 805-967-6043 (fax)

ADControl 2.0
Data acquisition and control software
Macintosh Plus or larger; 1 MB of RAM.

ADControl enables a Macintosh to monitor and control its external environment when used with the ADC-1 Data Acquisition and Control Peripheral. ADControl reads, records, displays and plots data obtained from sensors that respond to environmental changes (temperature, pressure, humidity, CO2, etc.). It acts as a data logger by recording analog measurements in a file for further analysis by spreadsheet or graphing software. ADControl can automatically issue commands to control external devices (appliances, instruments, X-10 modules or electronic equipment) via IF... THEN... ELSE... rules. No knowledge of a programming language is required as rules are quickly defined through menu and dialog activity. ADControl operates in the background under System 7 or MultiFinder, so the Macintosh may be used for other tasks while monitoring continues. Weather measurements, environmental monitoring, energy management, home control, product testing, small-scale process control, agriculture and university, industrial and scientific research laboratories are areas where ADControl is appropriate.

Alchemy III
Molecular modeling software
Macintosh II or Quadra; 2 MB of RAM; color monitor; 8-bit color card.

Alchemy III turns a Macintosh into a powerful visual tool for working with three-dimensional molecular structures. Its interactive three-dimensional graphics environment, easy menu and mouse operations, quick building and smooth, real-time rotation combine with fitting, minimization, docking and space-fill functions to deliver molecular science productivity. In Alchemy III, a chemist can build chemically-correct, three-dimensional models easily using atoms and fragments as building blocks. More than 50 fragments are supplied, including the standard amino acids and nucleic bases, and a chemist may add to this collection. Other features include: a built-in energy minimizer to optimize the molecule's geometry using molecular mechanics to find a local minimum; performs least squares fitting between two molecules by sequentially picking a minimum of three linearly independent pairs of atoms; a chemist may adjust the dihedral angles in selected bonds by interactively rotating the bonds using the mouse; a chiral/invert option locates and assigns chiral centers in a molecule by the Cahn, Ingold and Prelog rules, allowing a whole molecule, or just a selected atom to be inverted; generates wireframe models, as well as static ball-and-stick and space-filling displays; and more.

Tripos Associates, Inc.; 1699 S. Hanley Rd., Ste. 303; St. Louis, MO 63144; 314-647-1099, 800-323-2960 or 314-647-9241 (fax)

■ **Artificat**
Archaeological artifact cataloger and analysis tool
Macintosh SE/30 or larger; 4 MB of RAM; System 6.0.2 or later; hard disk drive.

Artificat is designed for Archaeologic consulting firms who currently spend many manhours manually recording the classification of historic and prehistoric artifacts and generating reports and tables. It has menus and data entry windows modeled after the normal logic employed in classifying an artifact. New categories can be added by the user. The generated data tables can also be exported as text files. A large variety of detail and summary reports are available. The artifact provenience data has been designed for a special export to semi-automatically generate 2-D and 3-D charts of the subject site for analysis. A graphic software application, such as DeltaGraph Professional, is required for chart generation. Customization services are also available.

AssayZap 2.0
Universal assay calculator
Macintosh 512K or larger.

AssayZap is a universal assay calculator. It offers regression fit to the logistic equation for calculating RIAs, ELISAs and IRMAs. It also includes a unique interactive curve fitting technique that permits all standard curves to be fitted, whatever their shape. Least squares minimization routines for two-parameter log-logit fitting, plus unweighted and weighted four-parameter fit are included. All data may be printed, stored on disk or passed onto other programs for further processing. AssayZap can be customized to a user's

AssemblyLIGN
DNA sequence assembly
Macintosh Classic or larger; 1 MB of RAM; System 6.0.7 or later.

For molecular biology research laboratories involved in DNA sequencing, AssemblyLIGN allows researchers to build a consensus DNA sequence from a variety of sequence fragments. To use AssemblyLIGN, users enter their fragment data from a DNA sequencing project, search each fragment for vector sequences, locate overlaps and similarity between fragments and generate a consensus sequence in an editable window. Once generated, this consensus sequence can be analyzed using IBI MacVector DNA and protein sequence analysis program, or saved in a variety of file formats, including those used by most VAX-based sequence analysis programs. Several features include: no limit on number of fragments and/or consensus length, finding of overlaps using both strands of a DNA sequence, user control parameters in locating overlaps and the use of a color editor, enabling users to better locate similarity between fragments.

Astronomy, Version 3.0
Astronomical plots
Macintosh 512K or larger.

Astronomy produces two astronomical plots in two separate windows. The first window, called Solar System, plots a Pole Star's eye view of the solar system for a given date and time. The second window, called Sky View, plots an image of the heavens as seen by an Earth-bound observer for a given date, time, longitude and latitude. This window also locates the sun, moon, planets, comets and major constellations. Both windows can be "thrown away," recalled, repositioned or resized. Users can also generate detailed enlargements of either window plot by using the program's zoom feature. Accompanying parameter files used in the calculations of planet and star positions can be modified with MacWrite, allowing users to customize the program to suit their own preferences.

Asymptote
Graph-processor
Macintosh Plus or larger; hard disk drive; System 6.0 or later.

Asymptote is a graph-processor that gives users complete control over graph making. Designed to meet the demanding needs of scientists and engineers, Asymptote lets users produce publication-quality plots easily and reads data from ordinary text files. Data can be manipulated with a built-in vector calculator, and Asymptote's advanced scripting language can be used to automate the plotting process. Asymptote is System 7 savvy. It supports Publish and Subscribe and QuickTime. Sophisticated memory management lets users open huge data files and plot as many points as memory allows.

AutoElisa
Software for analysis and management of immunoassay data
Macintosh SE or II family; 1 MB of RAM (4 MB recommended); 4th Dimension runtime module; System 6.0 or later.

AutoElisa was designed as a package for computation and management of large sets of enzyme immunoassay data in diagnostic laboratories. The central feature is a novel and rapid "parallel fitting" algorithm, implemented in C code, accessed as an external procedure by the fully relational database 4th Dimension. Unlike commercially available immunoassay analysis software, AutoElisa offers the following advantages: fast processing of large groups of assay plates without editing or intervention by the analyst; error estimates that account for measurement errors of the standards, as well as the samples; optimal outlier identification and rejection; easy retrieval of quality assurance parameters; and easily customized, user-friendly data reporting and import/export.

AxoData 1.2
Data acquisition program
Macintosh II or Quadra; 4 MB of RAM; hard disk drive; floating point processor; Instrutech ITC-16 or National Instruments' NB-MIO-16/X with NB-DMA-8-G or NB-DMA-2800 laboratory interface; System 6.0.7 or later.

AxoData is a program to simultaneously control an experiment and acquire data. It is suitable for current-clamp, voltage-clamp and a variety of other experiments requiring concurrent waveform generation and sweep acquisition. Automation includes a seal test, membrane test, P/N leak subtraction, external triggering and multiple control loops.

AxoGraph 2.0
Data analysis program
Macintosh SE/30 or larger; 2 MB of RAM; hard disk drive; floating point processor.

AxoGraph is a graphical data analysis program suited to the analysis and publication-quality presentation of electrophysiological and other data. AxoGraph reads any binary data files, AxoData or PC files by pCLAMP, AxoTape or AxoBasic. Other text and data file formats are supported. AxoGraph is now fully programmable, supports the creation of complex macros or custom analyses using a built-in interpreter for Basic, C, Fortran or Pascal.

AxoVideo 2.0
Image acquisition and processing
Macintosh II; 4 MB of RAM; hard disk drive; Data Translation QuickCapture (model DT-2225), Perceptics PixelPipeline or Scion LG-3 board or Photometrics cooled-CCD camera; 8-bit display; color QuickDraw; System 6.0.5 or later.

AxoVideo automates the capture and processing of time-lapse video images, and fluorescence ratioing such as for calcium-sensitive dyes. Acquisition options include averaging, ratio imaging, background subtraction, zone intensity, regions-of-interest, tiled images and time-slice composite images. Image processing options include spatial filtering, contrast enhancement, pseudo-coloring and annotations. A built-in scripting language allows customization of AxoVideo. It also controls shutters, a filter wheel, stage controllers and OMDRs.

Ball & Stick 3.5
Molecular graphics program
Macintosh Plus or larger; 1 MB of RAM; System 6.0.2 or later.

Ball & Stick is a three-dimensional molecular graphics package. It provides high-quality image display and a wide range of features for importing, viewing, editing and outputting publication-quality molecular models. Users can import coordinates from a wide variety of standard structure formats. They can export graphics to drawing, word processing and animation programs via the Clipboard or through PICT files. Customization of virtually every aspect of a molecule is possible: stereo images, mirror images, tonal shading, zooming, clipping and more. New features include mouse-driven, real-time interactive viewing, including rotation and translation of molecules.

CAChe WorkSystem
Computer-aided chemistry
Macintosh II or Quadra; 8 MB of RAM; 40 MB of hard disk space; System 7.0.

CAChe Scientific provides a line of computer-aided tools for the prediction and visualization of structure, chemical properties and reactivity designed expressly for the experimental chemist. CAChe facilitates understanding and interpretation of fundamental chemical processes from reaction mechanisms to pharmacophore/receptor site interactions. Reactivity modeling combines both new and established computational chemistry techniques with the latest advances in computer graphics. Transition state searching, frontier orbital docking, conformational analysis and electrostatic interaction visualization are just some of the facets to reactivity modeling. Probing steric interaction of electron isodensity surfaces, direct visualization of electrophilicity and nucleophilicity, graphic display of calculated bond order and bond strain are also important to chemists. The CAChe WorkSystem integrates all of these capabilities in one high-performance desktop workstation. It combines more than 20 times the speed of a MicroVAX II (90 MIPS), the intuitive Macintosh interface and stereoscopic three-dimensional color graphics. It includes a complete suite of CAChe chemistry applications. Software-only products and GroupServer applications are available.

Personal CAChe, a series of software applications that run on a standard Macintosh computer, is an affordable initiation to computer-aided chemistry techniques. It comprises an intuitive input device for three-dimensional manipulation and visualization, a molecule editor, structure optimization, automated conformational analysis, electronic structure prediction and easy connection to commercial and custom molecular databases. CAChe applications are expandable — as chemists prove the value of CAChe techniques, they can incrementally add more advanced software modules and hardware enhancements.

For additional compute performance, CAChe WorkSystem and Personal CAChe can be connected to high-end compute servers via invisible network programs.

CAMAC Subroutine Library
Subroutines for performing CAMAC operations
Macintosh with math coprocessor; System 7.0 or later.

The CAMAC Subroutine Library contains subroutines for performing CAMAC operations using a Macintosh computer and the 3922/2932 CAMAC interface from Kinetic Systems. This library is written in C, Think C and Fortran and contains the following subroutines: caopen, caclos, cam24, cam16, cab24, cab16, cactrl, ccstat, camsg and calam. These subroutines allow CAMAC I/O operations to be performed with single calls. Initialization calls are performed by calling caopen and callos. Single data transfers are performed by calling cam16 and cam24. Block transfers are performed by calling cab16 and cab24. Cactrl, ccstat and camsg perform Status and Control calls. The calam subroutine provides for asynchronous LAM handling via interrupts.

Chemical Critical Properties Database
Critical properties for 700 organic compounds
Macintosh Plus or larger; 1 MB of RAM; 800K disk drive; HyperCard 2.1 or ClarisWorks.
Chemical Critical Properties Database contains critical properties for 700 organic compounds, which are often required to estimate other properties, such as density, viscosity, heat capacity or thermal conductivity. Included information consists of critical temperature, volume and pressure, freezing point, boiling temperature and critical compressibility and acentric factors. This information may be exported to other programs, including most popular spreadsheets and word processors. The database is available in HyperCard or ClarisWorks format.

Chemical Inventory And Tracking Essentials 2.1
Tracks chemicals throughout a scientific laboratory
Macintosh Plus or larger.
Chemical Inventory and Tracking Essentials provides software and procedures for tracking chemicals throughout a scientific laboratory. Bar codes are used to improve the efficiency of administration and to insure that all users always have access to accurate information. Users have immediate access to the inventory from their Macintosh or Windows desktop. Searches are performed very quickly by name, formula, location or any other information. Each code is linked to a user-defined on-screen map, showing the exact location (room and cabinet) for that chemical. Additional fields are provided to record amounts, hazards, disposal dates or any other information.

Chemical Inventory System
Hazardous materials inventory
Macintosh II for MasterSystem; 4 MB of RAM; hard disk drive; 640 by 480 display. Macintosh Plus for Macintosh Data Collection; 1 MB of RAM; hard disk drive.
The Chemical Inventory System was developed to meet Federal and State regulatory requirements for reporting hazardous materials and is comprised of a master system and two data collection programs. The master system is programmed in 4th Dimension and contains the entire campus hazardous material inventory database and a variety of indices (chemical, building, department). Central to the system is a chemical index or "dictionary" that contains chemicals that are on the "California Lists of Lists." The data collection programs, one for the Macintosh and one for PCs, are simplified versions of the master system and are used by campus personnel to collect and manage individual campus inventories at the location of the chemicals. Text files are generated by these programs and the data can be collected into one program or set to the master system to maintain an accurate centralized database for the campus.

ChemIntosh
Chemical structures
Macintosh Plus or larger; 4 MB of RAM; hard disk drive.
ChemIntosh is a drawing program designed to create publication-quality graphics for chemical reports and papers. ChemIntosh checks for chemical syntax errors, calulate mass and formula and covert structures into stick diagrams. It is compatible with other Macintosh drawing applications and word processors. It allows users to place commonly-used structures directly on the tool palette for easy access and multiple use. ChemIntosh also offers a simplified user interface that makes it easy to draw chemical diagrams. All the tools are right on the palette. Text editing for captions is done inside the drawing area, next to the graphic, in WYSIWYG. On-screen animation shows changes as users scale, rotate or distort drawings. The program saves multiple preferences under the options menu for one-step changes in size, line width and type specifications. Chemical labels can have unlimited attachment points. A context-sensitive help window is provided, and a help pane reveals keyboard shortcuts. Other features include: an Adobe Illustrator-like PenTool, drawing tools for rings and bonds, an acryclic chain tool that draws in any direction, Bezier curves and arrows, Lewis dots, circled charges, multiple undo commands, restored editing when pasting back from other applications, one-electron arrows, orbitals, rulers, align and space commands, a reduced view option, ovals and arcs and the capability to use any font, style or size of text for captions and labels. ChemIntosh is System 7 compatible. Also available is a sister product for IBM-base computers called ChemWindow, which is Windows 3.1 compatible.

ChemStock
Chemical inventory program
Macintosh Plus or larger; 1 MB of RAM; System 4.1 or later.
ChemStock is a unique stockroom database that lets users track the chemicals they have on hand. Users can quickly check quantities, locations, suppliers and more, using simple standard Macintosh application features. ChemStock can search and sort by chemical name or formula, quickly reducing a structural formula to its molecular formula for searching. ChemStock also alphabetizes from a chemist's point of view; it gives numbers secondary priority, ignores certain characters and orders the entries the way a chemist would. If users are using a general database program, HyperCard or a spreadsheet to manage inventory, ChemStock will import their current files easily.

Counter 2.0
Computer emulation of an expanded mechanical laboratory counter
Any Macintosh.
Counter uses the Macintosh keyboard and mouse to emulate an expanded mechanical point counter. Each time users click a button or type a key, Counter tallies a count for that category. An audible "click" sound is produced each time a count is tallied, and a distinct "alert" tone is generated each time the total tally reaches a multiple of the alert interval. Errors may be subtracted from any category tally and the total simply by switching to the subtract mode. A distinct "subtract" sound is produced to audibly indicate the subtraction. The counter is automatically reset after a record is saved. A multiple clicking sound is generated to indicate the resetting action. Counter features an unlimited number of counts and automatic totaling. The number of records is limited only by disk space. The category names and count data are saved as a tab-delimited text file, which may be opened with any spreadsheet, word processor, statistics or plotting application. It is System 7 compatible.

CSC Chem3D And CSC Chem3D Plus
Molecular modeling and visualization
Macintosh Classic or larger; 1 MB of RAM; System 6.0.5 or later.

Cambridge Scientific Computing, Inc CS

In the biotechnology, chemical, petroleum and pharmaceutical industries, government and education, scientists and engineers use CSC Chem3D/Plus for analyzing and visualizing chemical models. With CSC Chem3D/Plus, users can convert CSC ChemDraw/Plus chemical structures into three dimensions. Users can read and write MDL MOLFILE, Polygen Molecular MOLFILE, Tripos SYBYL MOL and MOL2, Brookhaven Protein Data Bank and Macromodel formats. Complex models of up to 5,000 or more atoms can be viewed, analyzed and manipulated. New features that take advantage of System 7 include: Publish and Subscribe (for sharing data between applications) and context-sensitive Balloon Help. CSC Chem3D Plus contains all of the features of CSC Chem3D and also takes advantage of modeling in color, MM2 energy minimization and molecular dynamics.

CSC ChemDraw And CSC ChemDraw Plus
Chemical structure drawing standard
Macintosh Classic or larger; 1 MB of RAM; System 6.0.5 or later.
In the biotechnology, chemical, petroleum and pharmaceutical industries, government and education, scientists and engineers use CSC ChemDraw/Plus to produce professional-quality chemical drawings to present their ideas. CSC ChemDraw is designed for chemists, so common chemical notations that are

Cambridge Scientific Computing, Inc

difficult to draw are done automatically. Bonds can appear as normal, dash, hash, wedged hash, bold and wedged lines. Atoms come in any font, size and style and have automatic subscripting and superscripting. Pre-defined templates of 5-8 membered rings, aromatic rings and cyclohexane chairs are included. Other drawing tools include 24 types of arrows, highlighting boxes, orbitals, freehand curves, lone pairs, radical cations, radical anions, plus and minus charges. Multifont, multistyle text editing is included for captions. Other features include front to back ordering of objects, scaling, translation, duplication, rotation, full-page layout and PostScript output. New features that take advantage of System 7 include Publish and Subscribe (for sharing data between applications) and context-sensitive Balloon Help. CSC ChemDraw Plus contains all of the features of CSC ChemDraw and includes color, user-defined templates, support for the MOLFILE format, Standard Molecular Data (SMD) file format and the ability to convert CSC ChemDraw structures to SMILES.

CSC ChemFinder
Searching and information integration
Macintosh Classic or larger; 2 MB of RAM; System 7.0 or later.

Cambridge Scientific Computing, Inc

Handling information pertaining to chemical compounds is critical to scientists and engineers in chemistry. To assist with this task, chemists now have CSC ChemFinder, a software that revolutionizes the way information about chemical compounds is located, displayed and created. CSC ChemFinder seamlessly integrates searching by substructure and other criteria with the drawing tools of CSC ChemDraw and the modeling features of CSC Chem3D. CSC ChemFinder can also efficiently organize chemical information from other sources, such as the Chemical Abstracts database and MACCS. With CSC ChemFinder, users can instantly search for chemical compounds from within standard applications, such as Excel, FileMaker, WordPerfect and SAS JMP, tailoring these applications to specifically meet the needs of chemists. Whether integrated into a customized solution for a company or used by individual researchers to organize chemical compounds, CSC ChemFinder is unique software that helps chemists transform chemical information into discovery.

Desktop Microscopist
Interactive problem-solving tool for use in diffraction simulation and analysis
Macintosh with 68020 CPU or larger or Power Macintosh; floating point coprocessor.

Desktop Microscopist is an interactive problem-solving tool, designed to aid crystallographers in interpreting diffraction patterns of inorganic crystals and students in learning diffraction theory. Major features designed to achieve significant time savings by freeing the researcher from tedious analytical tasks include: TEM; SEM; X-RAY; SAD; CBED; BEKP; HOLZ lines; Kikuchi Maps; Stereographic Projections; Diffractometer; Ring Patterns; Forward and Back Laue Patterns; On Line Space Group Tables and Element Information; 2-D and 3-D Lattice Imaging; Defect Analysis; EDD Search Capability; Direct Video Capture; Wyckoff Position Generators for Unit Cells; d-spacing Tables; Angles between Planes Tables; Angles between Directions Tables; Structure Factor Calculations; on-screen Help; multiple windows; color; and Phase Diagram module. Future upgrades will include dislocation image simulation and automatic pattern indexing. Accelerated for the Power Macintosh.

Diatomic
Molecular mechanics and motion
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

Diatomic illustrates the translational, rotational and vibrational motions of diatomic molecules. It is an ideal vehicle for classroom lectures and demonstrations, lab assignments or independent study. Classical Mechanics allows users to observe animation of molecular translation, rotation and vibration, either separately or simultaneously; demonstrate vibration and dissociation using a realistic potential energy function; vary initial energies, molecular orientation and speed of motion; and display molecular time clock and numerical energies. Quantum Mechanics allows users to calculate and plot potential energy curves and wave functions; plot energy levels and degeneracies; and choose Morse, Lennard-Jones, harmonic or user-defined vibrational potential energy functions. Statistical Mechanics allows users to plot energy level distributions for as many as six different temperatures for each type of motion; calculate and plot thermal energies, heat capacities, molecular partition functions and entropies as functions of temperature; and display graphs separately or combine modes on a single graph.

Trinity Software; PO Box 960; Campton Common #3; Campton, NH 03223; 603-726-4641, 800-352-1282 or 603-726-3781 (fax)

digiMatic V2.0
Turns graphics into numbers
Macintosh Plus or larger; System 6.0.5 or later.

digiMatic converts graphic information into editable numerical data with a click of the mouse. Extracted data can be saved as tab-delimited text and imported into spreadsheet, graphics or other programs. The program allows users to quickly digitize charts, graphs or plots from existing sources. The resulting X/Y data is displayed with precision to four decimal places and the program supports linear and logarithmic axes. digiMatic greatly enhances the usefulness of scanners and digitizing tablets, although these peripherals are not required. The program will digitize up to 100 separate curves with as many as 1,500 data points per curve and a limit of 5,000 data points per session. Enhanced features give digiMatic the capability to automatically digitize scanned images that are rotated as much as 90 degrees off screen-square. AutoScanning features have been added to Version 2.0 to allow users to automatically recover data points from scanned images of spectral, chromatographic or other such continuous curve data. The program also has features to allow automatic calculation of the area under a section of a curve, can be used to obtain areas of polygons and closed curves and will estimate arc lengths.

The DNA Inspector IIe
Molecular biology
Macintosh Plus or larger; external disk drive or hard disk drive.

The DNA Inspector IIe gives a molecular biologist a complete set of tools for analyzing and manipulating DNA sequences. The program incorporates speech, allowing a single person to rapidly confirm a sequence. Available analysis routines include: enter/edit/confirm DNA sequences and comments; automatically convert downloaded text sequences; recombine up to 10 different DNA fragments with optional inversion; completely customizable restriction enzyme table; search for inverted or direct repeats; search DNA with sequence entered at keyboard or with a fragment of another DNA; complete restriction enzyme analysis of both linear and circular DNAs; base composition analysis, including sliding base composition; homology matrix analysis; extensive open reading frame analysis; M13 shotgun sequence reconstruction; search restriction enzyme database; and more.

DNA/RNA Builder V2.0
Molecular modeling and graphics software (color or black and white)
Macintosh Plus or larger.

DNA/RNA Builder is a molecular modeling and graphics software package. Users can create models of double- and single-stranded DNA and RNA Helix starting with a simple listing of the base sequence. Razor-sharp laser images may be output directly to the LaserWriter or pasted into draw- or paint-type programs for further manipulation. Features include: simple character string input (e.g., GGCGAGTC, etc.); color or monochrome output; dreiding or ball and stick models; variable scale and rotation; use standard sets of helix dihedrals, sugar ring puckers and base dihedrals (or user-defined); handles up to 50 bases or 1,200 atoms; and create coordinate data files for use with other programs.

DSPworks
Signal processing software
Macintosh SE or II family; 1 MB of RAM; hard disk drive; math coprocessor.

DSPworks is a signal processing software package designed for real-time data acquisition, signal analysis and signal generation. DSPworks is completely menu-driven and easy to use. It gives DSP professionals a complete library of built-in DSP algorithms for a variety of data and signal analysis capabilities. Because of DSPworks' intuitive characteristics, the learning curve is minimized. DSPworks is designed with both the novice and experienced user in mind. There are no commands to memorize and learn. General features include: test signal creation; real-time signal acquisition for selected DSP boards; large variety of signal processing functions; complete library of mathematical operations on signals; frequency domain operations; real-time spectral analyzer; real-time oscilloscope; power density spectrum; system estimation; and automatic interface with QEDesign.

ENVI
Remote sensing image analysis tool
Power Macintosh or Macintosh with 68040 processor recommended; 16 MB of RAM; 20 MB of hard disk space..

Given the growing volume and complexity of remote sensing imagery, earth scientists and others need increasingly powerful software tools that encourage quick data analysis and scientific discovery. ENVI (Environment for Visualizing Images) is an image processing package written entirely in IDL that allows scientists to import, process and analyze any remote sensing data including panchomatic, multispectral and hyperspectral imagery. Spectral libraries and spectometer measurements are also easily processed. ENVI includes sophisticated customization features and an adaptable window interface that allows users to design custom tools to tackle complex image processing problems. Features like array-based image math, user extensibility, advanced 3-D visualization tools and versatile annotation take advantage of IDL Research Systems flagship scientific visualization software, to give scientists the most powerful image processing sysstme available.

EnzymeKinetics 1.4
Analyzes and displays experimental data
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

EnzymeKinetics is a research tool that analyzes and graphically displays experimental data. Users simply enter the data, and the program does all the work quickly, efficiently and accurately. Version 1.1 also plots the inhibition constants Ki (inhibition of free enzyme) and Kii (inhibition of enzyme substrate complex). EnzymeKinetics accepts as many as 300 data points. Data may now be imported from Beckman DU600 and DU7000 spectrophotometers. Its graphic displays make it easy to spot and remove outliers, edit errors and visually check for conformity to Michaelis-Menten kinetics. Raw data may be transformed into specific activities by conversion from radioactivity counts, optical measurements or by applying a multiplier. Michaelis-Menten kinetic parameters K_m and V_{max} are calculated using the following algorithms: least square fitting after the following transformations (Eadie-Hofstee, Hanes-Woolf and Lineweaver-Burk, with or without weighting); Johansen-Lumry; a numerical version of the direct linear plot; and non-linear regression. Results are displayed in tabular form for easy comparison or graphed in a number of ways.

Equilibrium
Chemical equilibrium calculation program
Macintosh 512K or larger; Microsoft Basic Version 2.0.

Equilibrium calculates the equilibrium concentrations for up to 18 species involved in up to 18 reaction equations. The program also calculates the equilibrium-reaction temperature, the heat of reaction (Enthalpy) and the specific heat. The program outputs a list of species names and their equilibrium-molar concentrations. A before and after-reaction pie chart that displays the molar percentages of the mixture can also be produced.

ESP: Experimental Section Processor 1.1
Keeps track of synthesis data
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

ESP is an electronic card file that organizes the data users collect whenever they are characterizing new compounds. Each card has fields for entering melting and boiling points; chromatography mobility; H-1, C-13 and heteronuclear NMR; IR, UV-Vis spectroscopy; high- and low-resolution mass spec; elemental analysis; optical rotation; molecular structure; experimental procedure notes; and four user-definable fields. ESP is used just like a notebook. Each time users collect experimental data, they simply enter it into the appropriate fields. As users enter new data, the built-in checklist automatically updates, allowing them to see what they've collected and what remains to fully characterize a compound. When users are ready to write up their work, they just push a button and ESP compiles the data into a publication-ready "experimental section" format, including annotation and punctuation.

ESR
First-order isotropic ESR spectrum simulation program
Macintosh 512KE or larger.

ESR is a first-order isotropic electron spin resonance spectral simulation application. All naturally occurring isotopes for the first 103 elements are supported. The program permits a user to define nuclear abundances, spectrometer frequency, line width, spectral width, "g," hyperfine coupling constants and spectral resolution. The on-screen spectrum may be copied to the Clipboard for use with other applications or printed. Spectra may be saved in PICT files, and ESR has the ability to read and write spectral parameter datasets in ASCII files. ESR can simulate up to 24 nuclear spin sets.

ESR[a]
First-order powder ESR spectrum simulation program
Macintosh 512KE or larger.

ESR[a] is a first-order powder and solution electron spin resonance spectral simulation application. All naturally occurring isotopes for the first 103 elements are supported. The program permits a user to define nuclear abundances, spectrometer frequency, line width, spectral width, "g," hyperfine coupling constants and spectral resolution. It allows a user to simulate anisotropic "g" and "A" tensors, only anisotropic "g" tensor, or only anisotropic "A" tensors. Powder spectra may be simulated with either Gaussian or Lorentzian line shapes. A user defines the number of integration steps in the solid angle surface integration. The on-screen spectrum may be copied to the Clipboard for use with other applications or printed. Spectra may be saved in PICT files, and the program has the capability to read and write spectral parameter datasets in ASCII files. The program can simulate up to 24 nuclear spin sets.

FlexiTrace 2.0
Automatic graph-to-number conversion
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

FlexiTrace is data acquisition and image analysis software that automatically converts hard copy graphs into numerical data. It will extract the X-Y coordinates or the area of specific regions within any image, including line, bar, area and scatter charts. FlexiTrace is ideal for labs with equipment that give hard copy output. It eliminates measuring hard copy graphs by hand. FlexiTrace allows users to convert a library of paper graphs to computer format or access the numbers behind the graphs in published articles. The graphs may be scanned strip charts or maps, traces from a graphics tablet or any other Macintosh image created in a paint, draw or CAD program.

FullPixelSearch
Program for exploring images and identifying regions of interest
Macintosh LC or larger.

FullPixelSearch software allows users to search and find important regions inside TIFF or PICT images on any color-enabled Macintosh. It matches patterns at the pixel level, a function that previously has been available only on mainframe systems. FullPixelSearch allows users to simultaneously author a search routine while viewing an image. Users assemble the search templates either by copying and pasting regions of interest, or pixel by pixel. FullPixelSearch scans the image and records the location of all regions that match the search criteria. Features allow users to: locate regions of interest with extensive control of the search criteria; identify important regions in any image, and define a search based on those regions; save, as separate files, search templates and the location of all matches or finds generated; generate histograms for any selected region of an image and display coordinates and spectral class value for any pixel; specify 100 percent accuracy of the search routine, or relative accuracy at one percent intervals; and generate a "neighbor report" for all pixels of any color, enabling users to quantify the degree of randomness or uniformity in an image.

GC WorkMate 2.0
Gas/liquid chromatography
Macintosh Plus or larger.

GC WorkMate collects and analyzes data in real time from many types of GCs, LCs and autosamplers, including the HP 5890. A variety of hardware is supported, including built-in RS-232 options or third-party A/D converters. Remote control of the keypad on the GC/LC is provided when possible. Peaks are determined either automatically or manually and are reported in a variety of units, including areas, heights, weight percent, mole percent or user-specified units. Calibrations may be internal or external, single or multipoint. A customizable report feature controls the layout of information for both printing and exporting data to other programs (graphics and tables).

GC/MS Reader 1.0
Reads and displays files collected with the HP ChemStation for the HP 5890
Macintosh Classic or larger; System 6.0.7 or later.

GC/MS Reader for the Macintosh reads and displays files collected with the Hewlett-Packard ChemStation for the HP 5890 with a Mass Selective Detector. Both the Windows and Pascal versions of the ChemStation are supported; optional software is included to transfer files from the Windows ChemStation. Data and graphics can be exported to the Clipboard or saved to disk. The data can then be included in laboratory notebooks, presentations, etc., that are prepared on the Macintosh. Users may specify a background spectrum for background subtraction, average spectra together,

specify a parent peak and examine a table of abundances.

Gene Construction Kit
Plasmid drawing and DNA manipulation tool
Macintosh Plus or larger.

The Gene Construction Kit allows graphic manipulation of DNA sequences and has plasmid drawing capabilities. DNA sequences can be manipulated and represented graphically or as text. Segments can be cut and pasted in either mode and displayed as linear or circular, with user-definable thickness, pattern and color. Restriction enzyme sites can be marked and coding regions or other regions of interest can be indicated. Complete or partial digest gel electrophoresis patterns may be generated and viewed as a gel or as a table. The program keeps track of segment history and can display any generation for any segment. Different views of the construct can be stored with the construct itself and viewed when desired. Comments may be attached to any segment, site, region or whole construct. In the illustration window, multiple constructs, gels or sequence listings can be displayed simultaneously and can be connected with arrows or lines. Text labels, rectangles, round rectangles and circles can be added at any location in an illustration. A file searching module is included that enables the Gene Construction Kit to function as a simple database.

GeneJockey II 1.0
Sequence processor package
Macintosh with Color QuickDraw in ROM (Macintosh II, Centris or Quadra); 4 MB of RAM; 8-bit color monitor; System 7.0 or later; CD-ROM drive.

GeneJockey is a powerful, user friendly sequence processor package for editing, manipulating and analyzing nucleic acid and protein sequences of any size. It can generate PCR primers, scan nucleic acid sequences to select all possible pairs of oligonucleotides suitable for use as primers, etc. It incorporates a fast analyzer for the Applied Biosystems sequencer. It can accept data from the keyboard or imported as files in other formats. Database search facilities are also provided. Text files can be read from databases, including Genbank, EMBL, etc. GeneJockey i is still available. It is somewhat less sophisticated than GeneJockey II and has an upper limit of 32K on the size of a sequence file. It does not need a color monitor and is a powerful and flexible sequence analyzer.

GeneWorks
DNA and protein sequence analysis program
Macintosh LC, II or Quadra; 2 MB of RAM; hard disk drive; CD-ROM reader optional.

GeneWorks protein and nucleic acid sequence analysis software gives scientists great flexibility in analyzing and presenting data. The program includes gel assembly, multiple sequence alignment, composition analysis, primer design, structural prediction circular map displays and location of biologically significant features and regions. Taking advantage of the Macintosh interface, GeneWorks treats each analysis function as a different way of examining a sequence, enabling scientists to view a sequence from several perspectives simultaneously. GeneWorks performs most of its work in a graphic environment, allowing users to manipulate sequence data as text, maps, plots and graphs. Drawing and editing tools and a variety of formatting options allow scientists to produce high-quality color and black and white output for publication and presentation. GeneWorks' database capabilities include searches of nucleic acid and protein data banks on CD-ROM; it allows users to create highly refined databases of sequences relevant to their research.

Grant Tracker 5.0
Research grant account management
Macintosh with 1 MB of RAM

Grant Tracker is a common-sense bookkeeping program for non-accountants to keep track of research grant funds, expenses and personnel. It is equally useful for a departmental administrator who manages many grants for many principal investigators. Many different report formats are available. The manual teaches a user how to set up the accounts, and how to reconcile these accounts with expenditure statements. Users may also do what-if calculations and make projections. Grant Tracker is System 7 compatible.

HMO 2.0
Graphics-based Hückel molecular orbital calculator
Macintosh 512K or larger; hard disk drive recommended.

HMO saves users time and eliminates errors by using a graphics-based structure input. It allows users to focus on the results of the Hückel calculations, rather than getting bogged down in entering data. To use HMO, users draw the structure they want to investigate using the simple built-in drawing tools. HMO analyzes the structure, separates the pi electron network, performs the Hückel calculations and displays the results. HMO displays total pi energy, pi electrons, LUMO and HOMO energy and orbitals, charge densities and pi bond orders. Data may also be printed. Structures may have as many as 128 atoms and 64 pi-orbitals. Heteroatoms B, N, O, F, I, Cl and Br are fully supported. However, only P-orbitals are considered for sulfur. Bond and atom parameters may be edited.

Horizon
X, Y plotting and numerical analysis
Macintosh Plus or larger; 1.7 MB of RAM; 3 MB of free disk space.

Horizon is a program designed for scientists, engineers and medical researchers to provide a self-contained, easy-to-learn, easy-to-use (and easy to remember how to use) environment to analyze and graph X, Y data. With Horizon, users can readily import nearly any type of text data file produced by other applications; manipulate the data using standard numerical tools, including nonlinear least squares fitting routines; produce scatter or stacked histogram plots; and produce high-quality printed output on any Macintosh-compatible printer. From original concept to final execution, Horizon is a Macintosh application that supports cut, copy, paste and undo; background processing with MultiFinder or System 7.0; WYSIWYG text and graphics editing; color; TrueType plot symbols; PostScript output; and much more.

HyperADC-1
HyperCard data acquisition software for use with the ADC-1 peripheral hardware unit
Macintosh Plus or larger; 1 MB of RAM; two 800K disk drives or hard disk drive; HyperCard; ADC-1.

HyperADC-1 is a HyperCard stack for data acquisition and control tasks that is designed to work with the ADC-1, a peripheral data collection unit. Using HyperADC-1, programmers can create sophisticated application-specific stacks for a broad range of data acquisition areas. Any application that can be enhanced by knowing the current temperature, humidity, river level, pressure, energy consumption, etc., can benefit from the addition of an ADC-1. The HyperADC-1 stack can be operated either with an ADC-1 attached or in a simulated mode. The stack script includes the XCMDs and functions that allow communication with the ADC-1 through the modem port. Control of all ADC-1 features is illustrated within the scripts of cards, buttons and the stack.

I/O Port System Master Control
Gives users complete control of all input and output parameters for the I/O Port System
Macintosh with 68020 processor or larger; 2.5 MB of RAM; 20 MB hard disk drive; HyperCard 2.X; I/O Port System Bridge; System 6.0.5 or later.

The Master Control software package gives users complete control of all input and output parameters for the I/O Port System with a simple point and click user interface. Master Control also helps users with record keeping, data acquisition, logging, reduction and analysis. Special features like background operation and Apple Desktop Bus interfacing (ADB) multiply the power of I/O Port System products used with the Macintosh computer. There is little impact on ordinary applications, like spreadsheets and word processing, and pass-through ADB connectors give users full use of their keyboard, mouse, graphics tablet, etc., all while monitoring and controlling real world devices. Master Control also has the flexibility to run attended or unattended. It includes background INIT, desk accessory for viewing log file and HyperCard stack front-end to create and test a user's application.

IDAC-A-Stac
Data acquisition
Macintosh Plus or larger; 1 MB of RAM; two 800K disk drives or hard disk drive; IDAC/1000 Peripheral; HyperCard.

IDAC-A-Stac is a HyperCard-based data acquisition system that uses index cards for organizing information. Users select the data acquisition function for execution, and IDAC-A-Stac puts all the information at their fingertips. Users can collect and explore large amounts of information very quickly. Users simply add a card for each data acquisition task and click on a button. The program puts the type of data acquisition function performed into the card, collects the data, puts it into the results portion of the card and then allows users to enter a description for that particular card. For each data acquisition exercise, users start a new card in the stack. IDAC-A-Stac can be used to start a long data acquisition run, exit HyperCard and do other work for several hours and then come back into HyperCard and retrieve all the data that was collected by the IDAC/1000 data acquisition peripheral. Users can then search through the HyperCard stack for specific data on cards, print the results, move the data to other programs for analysis, etc. IDAC-A-Stac is based on the IDAC/1000 RS-232C data acquisition peripheral.

IDL
Complete scientific computing environment
Macintosh with 8 MB of RAM; 11 MB of free hard disk space.

IDL is a complete, integrated computing environment for data analysis, visualization and custom application development. More than 15,000 users in laboratories, universities and commercial institutions worldwide take advantage of IDL's comprehensive capabilities, spending only hours or days writing programs and complete applications rather than the weeks or months required in traditional languages like C or Fortran. IDL features include: an array-based, 4th generation language (4GL) for quickly prototyping new ideas; a built-in toolkit for developing custom MOTIF, Macintosh OS and Microsoft Windows graphical user interfaces; Numerical Recipes mathematical routines; an integrated statistics library; built-in gridding routines; and data display capabilities ranging from XY plots to volume visualization. The recent addition of HDF, CDF and netCDF — data formats critical to mission success at organizations like NASA — highlights Research Systems' commitment to

Igor
Graphing and data analysis
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 4.2 or later.

Igor is an interactive environment for experimentation with scientific and engineering data and for the production of publication-quality graphs and page layouts. Igor allows multiple data sets of any length to be displayed in any number of graphs and tables. In graphs, each curve has its own color, line size and style. Page layouts present graphs, tables, text annotation and PICTs. Fonts, type sizes and styles can be mixed in axis labels and annotation. Analysis includes Fourier transforms, curve fittings to built-in and user-defined functions, histograms, integration, differentiation and mathematical expression evaluation. Igor includes a structured macro language that allows automation of importing, analysis, printing and other operations. Igor is extensible by C programmers using the optional External Operations (XOP) Toolkit. XOPs supplied with Igor allow serial port and GPIB communications, importation of Cricket Graph and Excel data files.

Inorganic Qualitative Analysis
Simulation utilizing video images
Macintosh II or larger; 4 MB of RAM; hard disk drive; color monitor.

This new Macintosh version has all the features that have made the DOS version of Inorganic Qualitative Analysis so very popular with both students and teachers. Designed to supplement the wet lab experience, this program simulates the laboratory study of seven inorganic cations and four anions. Students may add reagents, heat, centrifuge or decant their samples, then draw conclusions based on their observation. In this unique program, the results are displayed as full-color digitized video images. The program generates unknowns randomly from seven cations (Mg2+, Ni2+, Cr3+, Zn2+, Ag+, Pb2+, Na+) and four anions (Cl,- I-, SO42-, NO3-). Unknowns may be selected from any of five levels of difficulty. In the Explore Reactions mode, students may simulate a lab experiment or check lab results by recreating the experiment in the simulation.

IPLab Gel
Allows users to perform gel analysis and densitometry functions
Macintosh II, Quadra or Centris; 2 MB of RAM (4 MB recommended).

IPLab Gel provides scientific Macintosh users with the ability to perform gel analysis and densitometry functions. One- and two-dimensional analysis techniques allow users to analyze dot blots or bands, report density statistics, identify peak positions and calculate peak values. IPLab Gel reads standard PICT and TIFF files and performs all processing and analysis on the full dynamic range of the original data to give maximum accuracy.

IPLab Spectrum
Scientific image processing and analysis software
Macintosh II or Quadra family; 2 MB of RAM (4 MB recommended)

IPLab Spectrum software supports a wide range of products for scientific imaging, visualization, analysis and laboratory automation. Applications include microscopy, low-light imaging, bio-medicine, astronomy, remote sensing and others. IPLab specializes in displaying and analyzing data with more than 8 bits per pixel and in supporting a wide variety of frame grabbers and camera systems. With IPLab, users can: acquire and process 16-bit gray-scale and 24-bit color images; automatically analyze particles; perform FFTs, image enhancement, densitometry and morphometry; compute ion ratios; and acquire, deconvolve and display 3-D serial sections. Users can control lab equipment, such as motorized stages, filter wheels and camera systems. IPLab reads image files in PICT, TIFF, text and raw binary formats. Users can also use IPLab as a development environment for new algorithms by adding their own code written in C or Pascal. Custom software development is also available from Signal Analytics.
$1,200 retail; hardware support options priced separately (includes one year updates)
Signal Analytics Corp.; 440 Maple Ave. E, Ste. 201; Vienna, VA 22180; 703-281-3277 or 703-281-2509 (fax)

ISIS/Base
Chemical database searching
Macintosh with 68020 microprocessor or larger; 5 MB of RAM (8 MB recommended for running multiple ISIS products); 2.25 MB of free memory; hard disk drive; System 6.0.7 or later.

With ISIS/Base, users discover a powerful new window into their chemical information. ISIS/Base, in conjunction with ISIS/Draw, a chemically intelligent drawing package, is used to store, search and retrieve structures from local databases containing all of a user's valuable research information. Or it can be used with ISIS/Host to access multiple databases stored on remote, networked hosts. The ISIS/Base tools let users easily create custom displays of retrieved text and chemical graphics, allowing users to view data in a way that makes sense to them. Users cut displays from ISIS/Base and, using their favorite application program, paste them into documents, spreadsheets and presentations. ISIS/Base is one of a series of programs that make up ISIS, the Integrated Scientific Information System.
$4,000 retail
MDL Information Systems, Inc.; 14600 Catalina St.; San Leandro, CA 94577; 510-895-1313, 800-635-0064 or 510-483-4738 (fax)

ISIS/Draw
Chemically intelligent drawing package
Macintosh with 68020 microprocessor or larger; 5 MB of RAM; 1.7 MB of free memory; hard disk drive; System 6.0.7 or later.

ISIS/Draw is a chemical drawing package that understands chemistry. To ISIS/Draw, a letter is an atom with valence limits; a line is a bond that attaches at correct lengths and angles; and the double bonds of aromatic ring systems are dynamic, changing with attachments made to the ring. Such chemical intelligence, unique among chemical drawing programs, allows scientists to draw structures and reactions rapidly and intuitively, saving time and effort. Structures cut and pasted between ISIS/Draw and other applications retain chemical intelligence, making it easy to share and edit chemical drawings. And, users get more than just an image with ISIS/Draw. Because the molecules or reactions users draw have chemical significance, users can use these sketches to query structure databases.

Kinetic, EBDA, Ligand, Lowry (KELL) Release 2
Radioligand binding analysis programs
Macintosh Plus or larger; 1 MB of RAM.

KELL is a collection of radioligand binding analysis programs: Kinetic, EBDA, Ligand and Lowry. Kinetic calculates association and dissociation rate constants for radioligands using a weighted non-linear iterative curve fitting technique. EBDA and Ligand are for analyzing equilibrium studies. Lowry calculates protein concentrations measured by the standard technique of Lowry et al (1951). A hyperbolic equation is used to fit the standard curve and calculate concentrations of unknown samples. The program comes with a PC manual supplemented by an on-disk Macintosh tutorial and sample files.

Kmax ver. 5.0
Data acquisition and analysis, instrument control
Macintosh with math coprocessor; System 7.0 or later.

Kmax features event-triggered data acquisition and event-by-event data recording with advanced tools for replay, sorting, two- and three-dimensional visualization capabilities and custom control panels. A user needs no formal programming experience to set up and execute a data acquisition task. The "Command Sequence Language" provides complete control over the data acquisition process, including instrument module I/O. Command sequences can be written in a robust scripting language, and the XCMDs and XFCNs allow a user to install special analysis and data acquisition routines. Special "Module Description Resources" contain detailed information about each instrument module in the data acquisition system. Kmax has support for the following: CAMAC, GPIB, VME, VXI and other high-level industry standard instrumentation.

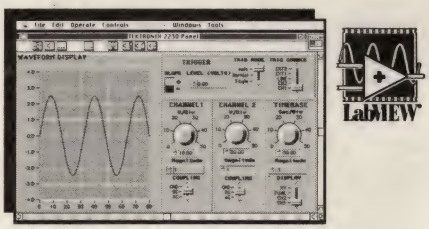
LabVIEW
Complete graphical programming system with built-in compiler for data acquisition, analysis, presentation and instrument control
Power Macintosh or any Macintosh with a coprocessor; 8 MB of RAM; hard disk drive; System 6.0.4 or later; 32-bit QuickDraw.



LabVIEW (Laboratory Virtual Instrument Engineering Workbench) is a graphical programming system for instrumentation. LabVIEW features a unique icon-based compiled programming language and user front panel interface for engineering and scientific applications. Users can build interfaces that make it quick and easy to train operators to use the software. Users program these virtual instruments (VIs) by building block diagrams. Users can acquire data from GPIB, VXI, RS-232 instruments, or from National Instruments plug-in data acquisition boards. Users can control more than 400 instruments by the ready-to-use icons in the Instrument Library. Analysis functions in LabVIEW include statistical processing, array manipulation and digital signal processing. Application areas include process monitoring and control, laboratory automation, instrument control, manufacturing automation, automated test, signal processing, simulation, design and classroom instruction. Users can execute complete VIs with run-time systems for run-only test stations or use the LabVIEW Application Builder to create stand-alone executables for distribution. Also available is the Test Executive Toolkit, a powerful, flexible package for automated sequencing of test programs. LabVIEW applications are compatible with LabVIEW running on Windows-based PCs and Sun SPARCstations. A native version for Power Macintosh is available.

Lazy 2.0
X-ray and neutron powder diffraction simulator
Macintosh Classic II or larger; 2 MB of RAM; hard disk drive; System 6.0 or later.

Lazy will calculate powder diffraction patterns for X-ray, synchrotron or neutron radiation. It is derived from the mainframe program, but the Macintosh interface makes it easy to set up the data and plot the results. Users simply point to the crystal symmetry and select from the list that unfolds. Users then point to one of the proposed space groups, to the radiation, to the diffraction technique, etc. The only thing users need to type is the atom coordinates. Users can even avoid that if they construct a library of structures. Users can then point to one of the structures to call up the coordinates, which can be edited to create a new structure. High-resolution plot output on LaserWriters and color printers can also be saved as PICT files. A fully-functional, free demonstration version is available.
SF600 (~$400) retail
X-Ray Crystallography Dept.; University of Geneva; 24 Quai Ernest-Ansermet; CH-1211 Geneve 4, Switzerland; (41) 22-781-21-92 (fax)

MacImdad
Molecular modeling software
Macintosh with math coprocessor; 4 MB of RAM; System 6.0 or later.

MacImdad is powerful, yet easy-to-use molecular modeling software, created to enable scientists to view, analyze and print macromolecules. Interactive viewing of molecules is now possible in a way that previously required a workstation. MacImdad features an enhanced user interface, providing easier access to powerful functions, such as rotation, animation and superimposition of molecules, and building molecules from sequence. MacImdad also provides easy access to all known crystal structures through an included database (from the Brookhaven Protein Data Bank), and also allows importation of coordinates of new structures, which are not yet in the database. With MacImdad, users may also create drawings or color slides to enhance presentations and publications.

MacMendeleev 2.1
Program for exploring the periodic table
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

As students begin their study of chemistry, they often find it difficult to appreciate the utility of the periodic table with its jumble of symbols and numbers. MacMendeleev helps them by putting all the information at their fingertips, and then offers a number of ways to explore elements and their properties. MacMendeleev will display a summary listing of more than 40 properties for any element. Selecting a property reveals its definition and source of the data. As many as six of these listings may be opened at any time for easy comparison. In addition, any two properties may be viewed on an XY plane, and any number of properties may be compiled into a tabular listing — the more traditional way of comparing properties of elements. Students can query the database for any selected range of elements and properties, which are displayed as a listing, a chart or a three-dimensional graph. Summary charts and graphs may be printed, and the database may be edited or modified.
$75 retail
Trinity Software; PO Box 960; Campton Common #3; Campton, NH 03223; 603-726-4641, 800-352-1282 or 603-726-3781 (fax)

MacSat II
Weather satellite image acquisition and processing system
Macintosh LC or larger; 4 MB of RAM; 40 MB hard disk drive.

The MacSat system enables live satellite images to be displayed, processed and analyzed on a Macintosh. Having received and translated the satellite emission, MacSat stores the pictures at a resolution of 800 by 800 pixels, each of which may be displayed at one of the 256 gray levels. MacSat can color images, highlight features and contrast images. Automatic coloring according to temperature is possible in some cases. Horizontal and vertical lines can be used to pinpoint exactly the reading of each pixel (point). The MacSat may receive images from a variety of different free commercial weather satellites. The latest version of MacSat can automate many of the image acquisition processes. MacSat can be left to receive images from many satellites without user intervention.

MacSqualor
Simulated qualitative organic analysis
Macintosh 512K or larger; hard disk drive recommended.

A simulation of the qualitative analysis laboratory, MacSqualor is designed to supplement a student's wet laboratory experience. Students choose from a list of more than 90 "unknowns." They have 5 mL or 5 g of the compound and 1,200 points to "spend" on tests. As in the lab, they may perform tests in any order and review the results as often as they like. They may choose from among 24 classification tests and 18 derivative forming reactions, or record the physical data, look at the elemental analysis or view the IR and NMR spectra, as they try to identify the unknown. Test results are generally reported in terms of visible observations, rather than as right or wrong, requiring students to apply the same deductive reasoning they would in the lab. Similarly, physical data are reported as ranges of numbers.
$165 retail

MacTrace
Graphical user interface for the accelerator simulation program TRACE 3-^D
Macintosh Plus or larger (FPU recommended); 1 MB of RAM (4 MB recommended); System 6.0.5 or later.

MacTrace is a sophisticated graphical user interface for use with the particle beam optics program TRACE 3-D utilized in accelerator physics modeling. Each of the 16 types of transport elements available in TRACE 3-D, as well as the initial and final beams, are represented by icons on a palette. The configuration of a beam line is set up by selecting and dragging the desired icons to a model window. Parameter values are entered into data windows for each element in the beam line. MacTrace takes care of setting up all arrays and similar book keeping. There is a minimal amount of alpha-numeric (keyboard) input used for setting parameter values, and no text or command line input is required. Expert system rules are built into the data input windows to assist users in assigning parameter values. MacTrace is fully integrated with TRACE 3-D and runs stand alone on a Macintosh.
$949 retail
The MACcelerator Project; PO Box 2813; Del Mar, CA 92014; 619-677-0133 or 619-677-0079 (fax)

MacVector
DNA and protein sequence analysis
Macintosh Classic or larger; 1 MB of RAM; System 6.0.7 or later.

MacVector gives molecular biologists and biochemists more than 100 different DNA and protein sequence analysis options in one complete package. It enables researchers to analyze their sequence data on their laboratory Macintosh without resorting to the institutional VAX or mainframe. Some of the different analysis options available include: restriction enzyme analysis, primer design, locating protein coding regions, protein translation, secondary structure plots, sequence comparisons and access to the Entrez: Sequences database CD from NCBI. Once completed with the analysis, all results are in either text or PICT format, which can be edited using drawing or word processing programs.

MassSpec 3.0
Graphics-based mass spectrum analyzer
Macintosh 512K or larger; hard disk drive recommended.

MassSpec helps eliminate the time-consuming and error-prone methods of correlating structure fragments to peaks observed in a mass spectrum. Users select the components from the Tools Palette to build their structure. MassSpec then generates a database of fragments resulting from bond cleavages up to three at a time. Users enter a mass number from their spectrum or from the list the program has created. MassSpec shows users the possible fragments and highlights them on the user's structure one at a time. It also displays information on isotope peaks, peaks arising from the gain or loss of one hydrogen and relative isotopic abundances (M+1...M+20) for all non-isotopic fragments. Structures with a molecular weight of 2,417 or less may be entered in the standard version. However, a second "Fast MassSpec" version is now included. This version requires a math coprocessor and is about twice as fast as the standard version. In addition, all molecular weight restrictions have been eliminated.
$125 retail
Trinity Software; PO Box 960; Campton Common #3; Campton, NH 03223; 603-726-4641, 800-352-1282 or 603-726-3781 (fax)

MassSpec.EXT
Uses a standard table of elements and atomic weights to compute fragment masses
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

MassSpec uses a standard table of elements and atomic weights to compute fragment masses. However, in many areas of research there is a distinct advantage to representing structures in terms of units of a higher order than atomic elements. For example, nucleotides might be represented as letters and peptides by three letter amino acid residue names. Cleavages that preserve the identity of these basic building blocks are of the greatest interest in mass spectrometric identification and sequence determination. MassSpec.EXT implements this approach by allowing users to replace the element database with a table containing the appropriate names and masses of the building blocks used to make oligomeric structures. Users don't have to draw the molecular structure for a polypeptide — simply enter its three-letter designation. MassSpec.EXT is shipped with an amino acid database. Other special databases may be easily added by using the MassSpecEdit program.

Molecules V6.2
Molecular modeling and graphics (color or black and white)
Macintosh Plus or larger.

Molecules is a productivity tool for visualizing stereochemistry of compounds using angles and distances or cartesian coordinates. Coordinates calculated on a mainframe, crystallography data or structures from the literature may also be used. Features include the ability to perform relative non-bonded energy calculations with various standard or user-defined parameter sets and the ability to rotate the structure to any arbitrary viewing angle, with variable scale and origin. It handles up to 1,000 atoms. Users can generate space filling atom or Dreiding model representations, shaded and "billiard ball" solid atoms. Users can create, edit and save molecular data files and user-defined wildcard atoms. Graphical output may be printed on a LaserWriter or pasted into draw- and paint-type programs.

N.N. Charge V1.0
Neural network-based program for computing atomic partial charges
Macintosh Plus or larger.

N.N. Charge is a neural network-based program for computing atomic partial charges in neutral, covalent molecules. Users can compute atomic partial charges

These Products Available Through Bottom Line Distribution
1-800-347-1923

using one of the parameter sets supplied with the program, or new parameters can be generated. Users can create new parameters using databases of charges from model compounds reported in the literature, or start with their own set of calculated charges. Parameters may be learned, refined and saved for future use. The program incorporates an easy-to-use mouse-activated command structure, with user friendly pull-down menus and online help screens. It will handle up to 15 atom types, and learning databases containing up to 50 molecules.
$199 retail
Atlantic Software; PO Box 299; Wenham, MA 01984; 508-922-4352

NanoVision
Molecular presentation graphics
Any color Macintosh; 2 MB of RAM (4 MB recommended); hard disk drive.

NanoVision makes top-quality molecular images easy and affordable. Users can visualize molecules containing up to 32,000 atoms, create publication-quality images and slides and produce smooth-motion animation. NanoVision reads popular file formats, such as Cartesian, Chem3D Cartesian, Alchemy II, Moldat, Brookhaven PDB and others, making it an ideal addition to other molecular modeling applications or to high-end workstation-based systems. In addition to large model capacity, NanoVision offers excellent speed and special clipping and coloring capabilities to selectively view or hide parts of a model that obstruct investigation. Amino acids can also be manipulated individually or in groups, based on protein chemistry information retained from imported files. Users can display the skeletal backbone or isolate prosthetic groups with a click of the mouse. Screen images can be converted into hard copy by adding text and labels, saving the image as a PICT file and copying it into a word processor document.

NEDlab
2.5-D electromagnetic PIC code with graphical user interface
Macintosh with FPU; 4 MB of RAM; System 6.0.5 or later.

NEDlab (Numerical Electrodynamics Laboratory) is a 2.5 dimensional, cylindrical or Cartesian geometry, particle and field simulation program featuring a GUI for highly interactive problem solving. Complex conductor geometry may be input by NEDlab's graphical draw/paint tools, from scans or other commercially available drawing packages. Field solutions are LaPlace, Poisson, Poisson-Boltzmann (for plasma sheath extraction problems) or time-domain Maxwell equations. Particles are treated with multispecies particle-in-cell, ray trace or fluid modules. The ray-trace and fluid algorithms may be iterated to self-consistency between applied fields and self-fields of the particles. Integrated plotting capability and help screens are readily available from menus. NEDlab has been applied to electron guns, positive and negative ion sources, rf tubes, accelerator cavities and other problems. A 60+ page manual describing algorithms and software usage, along with example files, is included.

Nemesis
Molecular modeling
Macintosh II family; 4 MB of RAM; hard disk drive; 12-inch or larger color monitor; System 6.0 or later.

Nemesis provides molecular modeling to users of desktop computers. Using the visual intuitive interface of Nemesis, entry-level molecular modeling is easy. Users can build and edit three-dimensional structures on screen, from an extensive library of minimized fragments, and create structures quickly and much more easily than with plastic models. Users can manipulate structures in 3-D and display as stick, ball and stick or space fill models; and visualize the geometry and shape of molecules in a variety of styles, all with depth-cueing. Calculation of partial charges is possible using the Charge-2 program. Users can examine the charge distribution and polar properties of molecules, including dipole moments. Dot surfaces can also be generated and colored either by atom type or by electrostatic potential. The COSMIC force field provided with Nemesis enables users to perform energy calculations, extensive conformational analysis and minimization. An inorganic database containing approximately 100 different crystal structures is available as an optional extra for investigating crystal structures.

NI-488.2 Software
Simplifies programming National Instruments Macintosh-to-IEEE 488 interfaces
Any Macintosh.

NI-488.2 is a software package that simplifies programming National Instruments Macintosh-to-IEEE 488 interfaces that function as GPIB controllers with complete communication and bus-management capabilities. The software installs as a loadable device driver and includes more than 50 GPIB-related routines and functions, eliminating the need for users to understand how to program the hardware. Operations include Talker, Listener, Active Controller and System Controller. NI-488.2 high-level functions and routines simplify interfacing to GPIB instruments and shorten development time. Low-level functions and routines offer a means of optimizing system performance or interfacing to special devices. The driver can be linked to application programs through language interfaces for Microsoft QuickBasic, Lightspeed C and MPW C. The software includes a HyperTalk language interface and HyperCard stacks to interactively develop instrument control applications. It is compatible with LabVIEW graphical instrumentation software.
Included with IEEE 488 plug-in boards for Macintosh computers
National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

NI-DAQ Software
Driver software for National Instruments NB Series data acquisition boards
Power Macintosh or Macintosh LC family or NuBus; NB and LC Series Boards.

NI-DAQ provides high-level software modules for developing data acquisition applications with the NB and LC Series Boards in a Macintosh computer. Functions of these boards include analog-to-digital (A/D) and digital-to-analog (D/A) conversion, digital input and output (DI/O) and timing input and output (TI/O). With one or more of the personal instrumentation boards installed, a Macintosh can become a personal laboratory, with the capability for real-world analog and digital measurement and control. The NI-DAQ for Macintosh software package is an essential ingredient for this system because it eliminates the low-level programming task and integrates, in a user-friendly fashion, the hardware capabilities with the high-level application programming environment of a user. A user can begin developing application software immediately since the package contains a set of routines callable from any language that supports system toolbox device manager calls. Language interfaces for MPW C, Think C, Think Pascal and QuickBasic are provided. It is compatible with LabVIEW graphical instrumentation software.
Included with data acquisition boards
National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

NI-DSP Software
Digital signal process software library
Power Macintosh or NuBus; NB-DSP2300, NB-DSP2301 or NB-DSP2305 digital signal processing plug-in board.

NI-DSP is a high-level, ready-to-go digital signal processing (DSP) software library for Macintosh NuBus computers. Scientists and engineers can use NI-DSP to develop real-time digital signal and data processing applications on the company's NB-DSP2305, NB-DSP2301 and NB-DSP2300 boards. NI-DSP includes a high-level software library of 32-bit, single-precision, floating-point analysis functions for Fourier and spectral analysis, digital filtering, waveform generation, statistical analysis, vector and matrix algebra and numerical analysis for the TI TMS320C30 DSP chip on the NB-DSP2300 board. NI-DSP transparently handles memory management on the boards and transfers data between the boards and computer memory without any added functions from application programs. In addition, serial data from the company's two- and four-channel dynamic signal acquisition boards can be sent over the Real Time System Integration (RTSI) bus directly to NB-DSP230X series boards while the Macintosh is currently using the bus. It is compatible with LabVIEW graphical instrumentation software.
Included with DSP plug-in boards for NuBus computers; available in Think C, MPW C and LabVIEW VI Library form
National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

NI-VXI Software
Simplifies programming VXI with C or LabVIEW
Power Macintosh or NuBus.

NI-VXI is a software package that simplifies programming VXI-NB2040 and VME-NB2040 MXIbus-based interface kits with C or LabVIEW. It features intuitive graphical tools for interacting with and learning about VXI, comprehensive high-performance routines for programming VXI using the Think C programming language or LabVIEW graphical instrumentation software, including a LabVIEW VXI Virtual Instruments Library to simplify graphical programming with LabVIEW. NI-VXI includes a Resource Manager, an interactive VXI Resource Editor, a comprehensive library of software routines for VXI programming and a VXI Interactive Control program for interacting with and learning about the VXIbus. NI-VXI includes support for multiple mainframe configurations. Programs developed with NI-VXI for Macintosh are compatible with NI-VXI programs for many other VXI controller platforms.

NMR"
Second-order isotropic NMR spectrum simulation program
Macintosh 512KE or larger.

NMR" is a second-order nuclear magnetic resonance spectral simulation application. All naturally occurring isotopes for the first 103 elements are supported. NMR" permits a user to define nuclear abundances, spectrometer frequency, resonating nucleus, line widths, spectral width, tick-mark spacing and both scalar and dipolar coupling constants. The on-screen spectrum may be copied to the Clipboard for use with other applications or printed directly via the ImageWriter or LaserWriter. Spectra may be saved in PICT files, and NMR" has the capability to read and write spectral parameter datasets in ASCII files. NMR" can simulate up to six nuclear spins (512KE) or up to eight nuclear spins (2 MB memory).

Parametric Application Template
Highly intelligent programmers interface for parametric equation evaluation
Macintosh Plus or larger; System 6.0.2 or later.

Parametric Application Template is a well-developed and time-tested application template for Microsoft QuickBasic. These interfaces allow programmers to create user-friendly parametric applications for math and science in very little time. If the extended time of application development frustrate users and incideous runtime errors are intolerable, the Parametric Application Template is for them. Many features may be included in an application in record time. These features include multiple pull-down menus, Parametric Graphical User Interface, interactive edit field design, case-sensitive parametric interface, file formatting and I/O, error trapping and recovery, sound synthesizer, buttons, switches, dialogs and editing. Not for the novice; these templates require experience to use and compile. The interfaces are intended for algorithm evaluation.

Pincers
Biochemistry
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

Scientists doing genetic and protein engineering in pharmaceutical companies, research institutes and academic laboratories are routinely involved in cloning of genes, constructing new genes based on existing genes and screening DNA libraries containing particular genes. This type of work depends heavily on two commonly used procedures: searching restriction sites either on the DNA sequence or protein sequence, which are convenient for cleaving or inserting other genes; and finding the best mixed DNA probes for DNA library screening. To facilitate this task, Pincers was developed as a very simple and easy-to-use program that can provide the information essential for the work with a minimum amount of learning time. Pincers is equally useful in the training of undergraduates and graduates, as well as scientific research in biomolecular structures.

Plasmid Artist V1.2
Creates and produces publication-quality plasmid diagrams
Macintosh Plus or larger; hard disk drive recommended; System 6.0 or later.

Plasmid Artist is a graphic program designed for biologists that creates and produces desktop publication-quality plasmid diagrams (graphical representations of recombinant DNA molecules used in the design and publication of experimental results). Plasmid Artist uses a simple, MacDraw-like user interface that allows biologists to construct diagrams detailing their recombinant DNA molecule-building strategies and results. Restriction digest maps can be easily created using imported sequence data. The program automatically keeps track of the size of the molecule as one "clones" in new gene fragments by using mouse-activated tools. It shows the map with correct scaling on screen and prints a high-quality image to any PostScript printer. Plasmid Artist also exports the publication-quality image as an Encapsulated PostScript file so that the diagrams may be pasted up with a page-layout program.

■ Prism
Image analysis
Any Macintosh, Quadra or Power Macintosh with FPU; 8 MB of RAM.

Prism image analysis software is a suite of programs designed specifically for microscopy applications, providing an extensive array of advanced morphometric and statistical analysis features. Prism offers measurement and analysis capability to the microscopist, including ASTM grain size, volume fraction of each phase, correlations between measurements and statistical comparisons between groups. Prism commands are fully scriptable.

Probe
Neural network approach to protein structure prediction
Macintosh Classic or larger; System 7.0 or later.

Probe is an integrated, user-friendly approach to protein structure prediction from amino acid sequence. It uses neural network technology to make a variety of predications about protein secondary and tertiary structure. While most of these networks have been published in major scientific journals, Probe uniquely brings them together with an easy-to-use interface, enables improvement in prediction through synergism of the various networks and incorporates new applications of these networks. The number of amino acids per protein in this version of Probe is limited to 400 residues. This is because predictions of tertiary structure are valid only for single domains and none of the motifs for which Probe was trained had domains larger than this limit. All other Probe routines should work properly for any size protein, so if users have a larger protein, it may be divided into several parts and run separately.

Office of Technology Licensing; University of California, Berkeley; 2150 Shattuck Ave., Ste. 510; Berkeley, CA 94704; 510-643-7201 or 510-642-4566 (fax)

Protein Predictor V2.0
Protein secondary structure prediction software (color or black and white)
Macintosh Plus or larger.

Protein Predictor is a protein secondary structure prediction software package based on the new neural-net method. Users can analyze and predict the secondary structure domains of any polypeptide starting with a simple listing of the residue sequence, using the IUB 1-letter amino acid designations. Users can predict coiled-coil regions, based on the latest published algorithm. Predictions based on alpha helix, beta sheet, turn and hydropathy indexes may be computed and displayed as point values or a moving average over a user-definable window. Users can highlight the occurrence of a particular residue and set prediction thresholds. The program generates numerical or graphical reports; display inline or bar-chart format; load two sequences and create homology matrix using PAM250 or other physico-chemical criteria; and create hard copy on a LaserWriter or ImageWriter. Users may also create and test index predictions.

QEDesign
Advanced filter design package
Macintosh SE or II family; hard disk drive; math coprocessor.

QEDesign is an easy-to-use, advanced filter design package. It is completely menu-driven and user intuitive, affording almost a non-existent start-up and learning curve. QEDesign performs complex mathematical computations for filter design, provides superior graphical displays and generates comprehensive design reports. General features include: complete menu-driven system; extensive error checking; extensive online help features; use of 64-bit floating point for all calculations; coefficient quantization variable from 8 to 32 bits; coefficient scaling; recycling of input for comparative analysis; tiled and stacked graphic displays for improved viewing; specification file for retention and retrieval of previously designed filters; advanced system analysis features; and extensive prototyping capabilities.

Quantique
Primer of Quantum Mechanical concepts
Macintosh Plus or larger.

Quantique illustrates and describes the basic principles of Quantum theory, including atoms, orbitals, molecules, variational method, particle in a box, etc., and provides a recap of the historical developments that led from classical physics to Quantum Mechanics. It also includes a copy of "The Quantum World," tables of physical constants, a listing of relevant Nobel Prize winners and extensive bibliography. Quantique is useful as an adjunct to standard Quantum Mechanics texts, as courseware at the undergraduate level and as a useful personal review of this important subject.

■ QuickLab
Data acquisition and control
Macintosh Plus or larger.

From installation to application, QuickLab is powerful, easy-to-use measurement and control software. It offers the power and reliability required in industrial and laboratory settings. QuickLab works over extended and non-extended AppleTalk networks and supports virtually unlimited I/O points. QuickLab compiles worksheets into stand-alone applications and runs multiple processes simultaneously in the background.

Reactions
Chemical-reaction rate program
Macintosh 512K or larger; Microsoft Basic Version 2.0.

Reactions is a chemical-reaction rate program that calculates the time varying species concentrations for up to 18 species involved in up to 18 reaction equations. The program also calculates the reaction temperature and the heat of reaction (Enthalpy). The final product of the calculation is a semi-log plot of concentration vs. time.

SamTrak 1.1
Sample tracking system
Macintosh Classic or larger (II family or Quadra recommended); 4 MB of RAM; hard disk drive.

SamTrak is a sample tracking application designed for analytical laboratories that don't need all the bells, whistles and expense of a full-featured Laboratory Information Management System (LIMS). There are two levels of password protection to limit access to commands, such as approval of requests and printing customer reports. Entering a request for analysis is simplified by automatic request and sample numbering, as well as automatic lookup of customer information. Assignment of analyses to a sample is as easy as pointing and clicking on a scrollable list. Users can check the status of any sample at any time. Users can define both the field label and balloon help text in the many user-definable fields. Reporting options include automatic or manual customer report generation with print-to-disk option, as well as monthly and quarterly report capabilities. SamTrak is a 4th Dimension-based application. Customization of the program is available.

Scan Analysis 2.21
Turns a Macintosh and scanner into a densitometry workstation
Macintosh 512KE or larger; acquisition device, such as ThunderScan, MacVision 2.0, HP ScanJet, QuickCapture, Apple Scanner, etc.; System 6.0 or later.

Scan Analysis turns a Macintosh and scanner into a complete densitometry workstation. It uses off-the-shelf scanners and digitizers, such as the ThunderScan scanner, a video camera and MacVision 2.0 or any scanner that can produce a true gray-scale image in the SCAN or TIFF (16 [4-bit] or 256 [8-bit] uncompressed) format, and allows a user to do densitometry (determine optical or photographic density) on these images. Features include: integration of user-selected regions on polyacrylamide and agarose gels, autoradiograms, TLC plates and any other media that can be digitized with ThunderScan or a video camera; both automatic peak sensing and manual integration modes; full control over the way a selection is integrated; data files can be directly imported into word processing and spreadsheet programs; full control over the way a densitometer plot is presented; and plots can be imported into popular graphics programs.

Scientific Graphics Toolkit
Produces mathematical and scientific graphs from data and functions in programs
Macintosh Plus or larger; True Basic Language Version 2.0 or higher.

The Scientific Graphics Toolkit produces mathematical and scientific graphs from data and functions. It works in any True Basic graphics mode and allows full access to the features of each mode. Users may draw normal XY graphs, log graphs, log-log graphs or polar graphs. Functions may be plotted, least-squares fits for multiple data sets shown, or topographic maps and vector graphs created. The program can also produce data graphs, function and parametric function graphs and Bezier and spline interpolations. It provides automatic scaling and selects axes labels and legends. In addition, 13 point styles, four line styles and full color support is provided. A manual and a disk sample of programs are included.

SerePlot 2.0
AppleScript-compatible graphing and data analysis
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

SerePlot is an application that allows users to plot X-Y type data and perform traditional, as well as graphical data analysis. Version 2.0 offers complete support for Apple Events, inter-application communication and scripting with utilities like AppleScript or UserLand Frontier. Apple Events can control every aspect of the application from data tables, to plotting, to analysis. SerePlot is distinguished from other data analysis packages by its emphasis on interactive on-screen data analysis. For example, using the integration tool, users can integrate under a curve of interest simply by dragging the cursor. Other graphical analysis tools include point value, average, derivative and others. SerePlot fully supports more traditional data analysis with linear and non-linear curve fitting to user-defined functions, Fourier transforms with power spectra, function evaluation, smoothing and more.

SigmaPlot
Scientific graphing
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 4.2 or later.

SigmaPlot is scientific graphing software for creating publication-quality technical charts and graphs. It includes a full range of scientific graphing features, including error bars, grids, curve fitting, axis breaks, multiple axes, regression lines, confidence intervals, quality control lines and more. Users may choose from a wide selection of graph types, such as scatter and line graphs, vertical and horizontal bar charts, stacked bar charts, box plots, step plots, histograms, quality control graphs and pie charts. A variety of specialized axis scales are also available, including linear, semi-log, log-log, natural log, probability, probit, logit and reverse scales. Data may be input from a variety of sources, including directly from the keyboard, or from Excel, tab-delimited and other text files, into a huge worksheet (16,000 columns by 32,000 rows). The software includes an extensive mathematical transform language and a powerful nonlinear curve fitter. SigmaPlot also offers users control over all independent graphic elements and a page-layout system similar to desktop publishers. Graphs can be sent to any output device or exported to PICT or EPS files.

SoftPanels
Front-panel software packages
MacAdios II, II Jr or II/16; MacAdios SCSI products.

SoftPanels is a series of five, easy-to-use front-panel software packages. Designed to help scientists and engineers quickly measure and control laboratory experiments directly from a Macintosh, SoftPanels are equivalent to instrument front-panels for the computer screen. They can be used to debug I/O hardware, cables and sensors before implementing more sophisticated applications software. When used with GW Instruments' MacAdios family of data acquisition and control hardware, they are ideally suited for such applications as medical research, product test stands and manufacturing quality control.

SoftPump
Syringe pump virtual instrument software
Macintosh with math coprocessor; 8 MB of RAM; 5 MB of free hard disk space.

Developed for controlling WPI's SP200-series syringe pumps, SoftPump sets up a graphical computer interface that allows users to define complex protocols for infusing and withdrawing fluids from laboratory animals. It then executes and oversees these sequences, graphically displaying the experiments' status, creating permanent data files on floppy disk and printing, according to user requirements. An audible alarm alerts the researcher to a malfunction, and preprogrammed instructions can be manually overridden at any time. It controls as many as 99 syringe pumps and performs up to 999 experimental protocols sequentially, lending consistency and accuracy to longterm studies.

SoilChem
Chemical speciation
Macintosh Plus or larger; 1 MB of RAM.

SoilChem calculates the speciation of chemical elements among the aqueous-solution, solid and adsorbed forms in a soil or other natural porous medium. The method of calculation employed in this program is based on chemical thermodynamics. For each component of a soil solution, a mole balance equation is set up and thermodynamic equilibrium constants, corrected for ionic strength and, if appropriate, surface charge conditions, are incorporated into the terms of this equation according to the law of mass action. The solution of the set of non-linear algebraic equations that results from mole balance applied to all the components simultaneously provides the concentration of each dissolved, solid and adsorbed species in the system under consideration. User-friendly programs, FileBuild and FileCor, assist in the creation of an input data file containing the chemical information needed to initiate a speciation calculation.

SpectraSoft
Integrated spectrophotometry software
Macintosh with math coprocessor; 8 MB of RAM; 5 MB of free hard disk space.

Engineered for use with WPI's 1000-series single and dual beam spectrometers, this LabVIEW-based software employs graphically displayed virtual instrument panels to give users precise, flexible control over instrument calibration and setup, data collection, data analysis, printing and storage. It provides color, real-time oscilloscopic display during data collection, accommodating up to five discrete wavelengths, displaying full or partial spectra, measuring the light absorbed and the light transmitted by sample solutions, and calculating concentration constants. It performs a variety of mathematical analyses, as well as plotting overlay and waterfall graphs on incoming data or on retrieved data files.

Spyglass, Inc.
Scientific/engineering data analysis, visualization and management
Macintosh II; 1 MB of RAM (4 MB recommended); 256 color (8-bit) display; hard disk drive; floating point coprocessor.

Spyglass supplies tools for the analysis, visualization and management of scientific and engineering data. Spyglass Transform (with View Utility) manipulates floating point data and converts data into color raster images, color contour, vector or surface plots. Spyglass Format produces presentation-quality animations and layouts of color images. Spyglass Dicer visualizes volumetric data by displaying slices and color cubes of three-dimensional datasets. Spyglass Plot is a column data analysis tool that can handle extremely large datasets up to 32,000 columns wide.

Stereochemica V2.0
Interactive graphics templates (paint and PICT format)
Any Macintosh; paint or PICT-compatible draw or paint program.

Stereochemica Interactive Graphics Templates is a software product that utilizes the graphics capability of the Macintosh to generate illustrations for papers and talks in the chemical and life sciences areas. Stereochemica includes pre-drawn Newman, Fischer, flying wedge and sawhorse diagrams and rings, chairs, boats, space-filling models, porphyrins and heterocycles. Using the templates, users may modify and customize basic figures to generate the desired diagrams and illustrations. Diagrams produced are compatible with Macintosh word processing and desktop publishing software.

SuperLab 1.5
General-purpose psychology testing package
Macintosh Plus or larger; System 6.0.3 or later.

SuperLab is general-purpose psychology editing and testing software. It allows users to use any PICT file as a visual stimulus and any SoundEdit file as an auditory stimulus. The editor allows a "free format" experiment design with no preset limits. A built-in "codes" editor permits the creation of codes and code values, then lets users attach these code values to trials. After running an experiment, the collected data will already be precoded. Other features include: one millisecond resolution, voice input, conditional branching, trial randomization, feedback to subjects, a Responses Editor and support for the National Instruments' NB-DIO-24 I/O card.

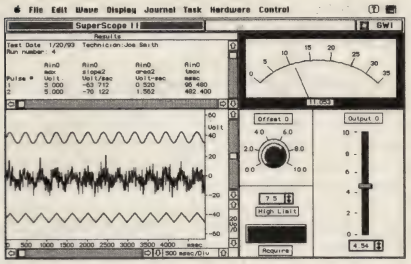
Cedrus Corp.; PO Box 8026; Silver Spring, MD 20907; 301-589-1828, 800-233-7871 or 301-589-7551 (fax)

SuperScope II
Waveform acquisition, analysis and presentation software
Macintosh Classic or larger; 4 MB of RAM; hard disk drive; System 6.0.7 or later.



SuperScope II is a software instrumentation design environment that enables users to build powerful computer-based instruments in relatively little time — no programming experience is necessary. When used with GW Instruments' MacAdios family of data acquisition and control hardware, SuperScope II is ideal for such applications as scientific research, industrial measurement and control, medical monitoring and manufacturing. Capabilities include: create virtual instruments with displays, text windows, switches, meters, knobs, buttons, dials, lights and thermometers; digitize, analyze, plot and store to disk continuous streams or discreet blocks of waveform data; extensive waveform arithmetic and analysis with more than 80 waveform functions, including spectrum analysis, filters and trigonometric; supports GW Instruments data acquisition boards, National Instruments data acquisition boards (via the NI-DAQ library), RS-232 instruments and IEEE-488 instruments; digitize up to 112 channels at a 25µs-per-point rate with the MacAdios II NuBus board and daughterboard hardware system; extend with Basic, C, Pascal or Fortran programming language; includes powerful debugging tools; includes interrupt-driven waveform generator; easy access to TurboDriver and HyperCard XCMD routines; and is available in open form where users add their own C source code to the SuperScope II Think C project.

SynTree 2.0
Program for exploring organic synthesis
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended.

SynTree provides a unique set of software tools for exploring the intricacies of organic synthesis. The program can be most easily described as one in which a goal structure is entered and then mapped against a transform database, searching for precursors that are one chemical step removed from the goal. Because there can be many choices at each step, the synthesis process forms a branched tree. SynTree lets users move up, down and along the branches of the tree, exploring a variety of synthesis routes quickly and easily. The real power of SynTree rests in its ability to learn the chemistry users want it to know. Users can expand the program's transform database by using the Transform Entry module.

TAPP
Materials property database
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; HyperCard 2.0; System 6.0.5 or later.

TAPP, Thermochemical and Physical Properties, is a database of materials properties developed to give engineers and scientists rapid access to a wide range of thermophysical property data. TAPP contains property data for more than 10,000 inorganic and organic compounds, including 6,000 solids, 2,000 liquids and 2,000 gases. The solids database includes information on crystal structure, density, thermal expansion, elastic moduli and thermal conductivity. The liquid and gas databases include information on density, viscosity, thermal conductivity and surface energy. Transition temperatures and critical properties are also included, along with thermodynamic data and vapor pressures for more than 4,000 compounds. More than 1,000 temperature-composition phase diagrams for metal, oxide and halide systems are also included. A simple graphic user interface allows rapid selection of compounds and display of data. The database can be searched for compounds with specific combinations of properties. Properties are displayed in a spreadsheet format.

UltraFit 2.1
Non-linear curve fitter
Macintosh Plus or larger; 1 MB of RAM.

UltraFit is a non-linear curve-fitting program. Data may be keyed in or copied and pasted from other Macintosh programs, including Microsoft Excel. Data can be manipulated with the powerful data editor and many transforms are possible, including user defined. Data can also be weighted. Users can fit and graph data using either the Marquardt or Deming algorithm, then copy and paste the graph into other documents or print it out directly. A Log Book facility automatically calculates and stores goodness-of-fit index and standard errors for each fit. Unknown values can be interpolated on standard curves for assay purposes. New features include: multiple lines per graph; multiple graphs per page; graphs fully moveable and resizeable on the page; tools menus; draw ellipses, circles and rectangles; line thickness fully controllable and text can be added anywhere.

UniVersions
Statistics, modeling and equation solving
Any Macintosh.

UniVersions combines the capabilities of a physical constant database, unit conversion facility and scientific calculator in an integrated software package. At the heart of the program is a well-referenced database that encompasses many of the important physical constants, quantities and measurements of interest to the scientist, from area and Avogadro number to volumetric flow and weight. Automatic features include tracking of significant digits of physical constants and scaling of quantities using magnitude prefixes. Unit conversions are literally push-button — there's no need to search through long lists of available unit systems. In addition to the general database, UniVersions comes with specialized databases for NMR spectroscopy, photometrics and radiation measurement. All of the databases are extensible, allowing users to modify the existing properties. The operation of UniVersion's scientific calculator is similar to commonly used handheld calculators, with a full range of functions. Features include a memory register, plus log and trig functions.

VoxelView/Mac
Volume rendering program
Macintosh II family (Macintosh Quadra recommended); 8 MB of RAM; 24-bit color video; System 7.

VoxelView/Mac provides a complete volume visualization system for Macintosh II computers. It allows users to view three-dimensional data as 3D volumes, with all the internal structure and information preserved. The program provides a true volume rendering solution for various applications, including microscopy, medical imaging, oil and gas exploration, nondestructive industrial inspection and fluid dynamics applications. VoxelView/Mac accurately reconstructs 3D data by representing objects as collections of cube-like building blocks called voxels or volume elements. Each voxel is a sample of the original volume. It is identified by x, y and z coordinates, and has a numerical value representing some measured or calculated property of the original object, such as density, luminosity or temperature. To render a view of the original volume, the voxels are projected onto the screen in order, directly rebuilding an image. VoxelView/Mac renders up to 160,000 voxels per second on the Macintosh Quadra, and includes rendering parameters and features previously available only to high-end workstation users, such as opacity control and reflective lighting. VoxelView/Mac is System 7 compatible and allows users to create one or more animations of any particular data set in a background mode while working within another software package.

Vertical Markets/Statistical Analysis

Biometrics
Comprehensive stats package for the life sciences, including EDA, inference, regressions, Anova, cluster analysis, classification and more
Macintosh 512K or larger.

Biometrics is intended to serve the needs of people engaged in the biological and life sciences. The program set covers the materials in the reference Biometry by R.R. Sokal and F. James Rohlf, with a few exceptions and considerable additions. For descriptive statistics, various EDA techniques are adapted, including stem-and-leaf displays, boxplots and coded tables, as well as standard techniques, such as histograms, simple data entry and t-test analyses. Statistical distributions and statistical inferences are covered in detail as is hypothesis testing. A set of programs for the analysis of variance of experiments includes factorials with replications, unbalanced factorials, nested designs and repeated measures. Data analyses for experiments include the Duncan multiple range test. Multilinear regression and correlation analyses include the factor and principal component analysis and the "partial components" analysis to study the relative influence of variables in the regression process. For the purposes of classification, cluster analysis programs are included.

Business Statistics
Statistical tools
Macintosh 512K or larger.

This package contains statistical tools useful in a business setting. The coverage is similar to Experimental Statistics, but less emphasis is placed on the variety of design of experiments and analysis of variance. Instead, a concentration is made on those types of experiments that are most applicable in a business ambiance. Sampling procedures are given special attention, and sections on quality control and system reliability are included. A section of forecasting techniques is provided, with examples of time series. There are many numerical examples to illustrate the ideas and the programs. A glossary of statistical terms is supplied.

hoc (Scheffé) contrast. Tests can be done on between- and within-subject variables. Plots of interactions are obtained by clicking the desired interaction and choosing "Graph means" from the "Explore" menu. Tables of means are computed in like manner. There is no limit to the number of subjects (observations) in the design. Designs with unequal cell sizes can be analyzed. CLR Anova includes a data entry and database facility designed specifically for data used in the analysis of variance. Group identification codes are generated automatically, greatly reducing the amount of time needed for data entry. Several sample data files are included. Data entered using other programs, such as Microsoft Excel, and saved as text can also be easily analyzed.

CLR StatCalculator
Solves small to medium statistical problems
Macintosh Plus or larger; 1 MB of RAM; HyperCard.
CLR StatCalculator is a HyperCard stack designed for solving small to medium statistical problems. It simulates a statistical calculator with a calculator display, seven standard functions, 13 statistical functions and three memories. Statistical functions provided include: mean, standard deviation, standard error of the mean, correlation, regression, single sample t-test, independent groups t-test, correlated t-test, probability of z, probability of t and probability of F. Data can be entered in scrollable fields or can be read from text files. Because CLR StatCalculator is a HyperCard stack, it can be customized or modified as needed. Functions can be copied from the stack and used in other HyperCard stacks. CLR StatCalculator works quickly because it uses XCMDs and XFCNs for many of its calculations.

Design
Provides sample size estimation, tables of expected mean squares for balanced experiments and randomization plans
Macintosh Plus or larger; Systat.
Design provides three distinct capabilities: Sample Size Estimation, Tables of Expected Mean Squares for Balanced Experiments and Randomization Plans. The program can estimate sample sizes needed to obtain desired statistical power given an effect size and significance levels. Design can also be used to estimate statistical power at specific sample sizes. Design uses the algorithm of Cornfield and Tukey (1956) to calculate tables of Expected Mean Squares for hierarchical models in balanced experiments. The program also generates randomization plans in a form that can be easily edited with a word processor for incorporation into memos and reports. The randomization plan is generated by specifying the details of the experiment through a series of commands.

Econometrics
Econometric methods, including regression models, forecasting and linear equation models
Macintosh 512K or larger.
Econometrics covers the material (with some exceptions and additions) in the text Econometric Methods by J. Johnson. Topics covered include: statistical distributions and statistical inference; multilinear regression, including weighted regression models, ridge regression, splines and logit analysis; models using sets of simultaneous equations; models based on time series, including autocorrelation, seasonal models, lagged variables, the Cochran-Orcutt correction for autocorrelation in residuals and the Durbin-Watson statistic. A full set of file transfer programs is included so that data can be transferred to and from popular spreadsheets.

Lionheart Press, Inc.; PO Box 20756; Mesa, AZ 85277; 602-396-0899, 514-526-7877 or 602-396-0932 (fax)

Experimental Statistics
Statistics
Macintosh 512K or larger.
This general-purpose statistics package covers the following major topics: distributions and sampling, statistical inference, regression analysis, the design of experiments and the analysis of variance. The full-size book describes the background and usage of statistics, with examples. Program instructions cover specific details of the more than 60 computer programs included in the package.
$145 retail
$200 retail; package of Experimental Statistics and Business Statistics
Lionheart Press, Inc.; PO Box 20756; Mesa, AZ 85277; 602-396-0899, 514-526-7877 or 602-396-0932 (fax)

Exploratory Data Analysis
Statistics
Macintosh 512K or larger.
Exploratory Data Analysis is graphics oriented and makes use of the new EDA techniques. Users will be able to examine data with letter-value displays, stem and leaf displays and box plots. When fitting data to a line, users will be able to run a resistant line through the data points, as well as carry out regression calculations. Analysis of variance is complemented by median polish and the preparation of coded tables. The distribution of data points can be checked by drawing rootograms. The program set includes cross tabulations, distributions, regression, sensitivity analysis and much more.

EZ-X11
Version of the Census X-11 seasonal adjustment procedure
Macintosh Plus or larger; 1 MB of RAM.
EZ-X11 is Estima's version of the Census X-11 seasonal adjustment procedure. It provides a fully menu- and dialog-driven interface to the full X-11 procedure, including both quarterly and monthly adjustment, trading day and holiday adjustments. Users can either adjust series one at a time or build a batch file for automatic adjustment of hundreds of series. Output can be sent to a printer, a file or suppressed for batch runs. EZ-X11 also offers a number of important data preparation procedures, such as interpolation, compaction, benchmarking and splicing. Other recent additions to the package include forecasting using exponential smoothing and spectral techniques and high-quality graphics. EZ-X11 is fast, accurate and easy to use. It can import data in ASCII formats and also directly from Lotus or dBase III on the PC and Excel (saved as WKS) on the Macintosh. While designed to work closely with the RATS econometrics package, it can also be used as a stand-alone program.

Fastat
Statistics and graphics package for intermediate users; accommodates up to 150 variables
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.2 or later.
Fastat is a statistics and graphics package. With Fastat, a user can do summary statistics, one-way and multiway tables, chi-square, Pearson and Spearman correlations, regression, non-parametric tests, Anova, Anocova, series transformation and smoothing, forecasting, principal components and common factor analysis, and traveling salesman problems. Fastat can produce two-and three-dimensional full-color scatter plots, line plots, bubble plots, regressions with confidence intervals, influence plots, probability plots, scatterplot matrices (sploms), box-and-whisker plots, histograms and cumulative histograms with smoothing, stem-and-leaf diagrams, time-series plots, autocorrelation and partial auto-correlation plots, and factor-loading plots. Fastat offers support of the QuickTime system software extension. QuickTime allows Fastat users to view a series of Fastat plots or graphs as an animated movie and watch how data changes over time. Fastat also offers editing and help functions, an easy-to-understand user's manual and free telephone support.

Flo•Stat 2.0
Elementary statistics, mapping and graphics software
Macintosh Plus or larger.
Flo•Stat is a unique statistical and mapping system for the professional analyst. The program's speed, ease of use, standard statistical routines, data manipulation and transformations, graphics, tabular and mapping output and accompanying social databases and maps make it ideal in producing the output needed for today's scientific and business reports. Features include: the linking of user-created object-format maps; copy and paste color maps and graphics as draw objects to word processing and draw/paint programs; pasting tabular output to word processor or spreadsheet; report listings, descriptives and frequencies; T-test and Anova; banner cross-tabulation, partial correlation and multiple regression; and choropleth maps, pie line, bar, histogram, ogive, scattergram and three-dimensional block chart.

Global Data Manager 2.3
Comprehensive collection of global statistics; allows detailed comparison and analysis of more than 8,000 data variables for every country in the world
Any Macintosh.
Global Data Manager is a tool to help users study, explore and research the vital statistics of the world. It integrates into one system the world's most complete inventory of global data and makes that data accessible to researchers, policy makers, corporate executives, students, teachers, media and the general public. More than 8,000 variables for each country can be found on Global Data Manager — population, food production and consumption, energy production and consumption, health, education, military, natural resources, environment, economics and more — from data provided by the U.N., World Bank, World Resources Institute and more than 20 others. Global Data Manager allows users to easily manipulate this data in a wide variety of ways. It is annually updated. Global Data Manager 2.3 includes the Basic World Data Disk; other Data Disks are available as well.
$75 retail; Global Data Manager and Basic World Data disk

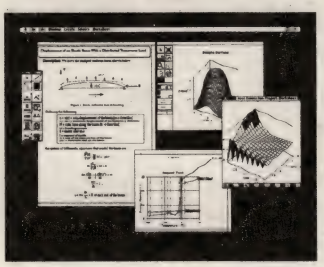
HiQ
Numerical analysis
Power Macintosh or Macintosh with 68020 or larger processor; math coprocessor (68881 or 68882); 5 MB of RAM; Color QuickDraw; System 6.0.5 or later.



HiQ is an object-based numerical analysis software package that gives scientists and engineers more than 650 mathematical functions; publication-quality output; interactive three-dimensional graphics; a scripting language; a compiler; and a set of application-

specific "Problem Solvers." HiQ follows a worksheet metaphor for organizing and presenting data — users make entries by placing data inputs, annotations, graphs and Problem Solver icons on their worksheet. With the Problem Solvers, users interactively explore numerical integration, expression evaluation, optimization, ordinary differential equations, roots of polynomials, nonlinear systems and other typical numerical analysis applications. Users can call the Problem Solvers and analysis functions from HiQ-Script to solve more complex problems. Problem Solvers address mathematical disciplines, such as integral equations, nonlinear systems, data fitting, ordinary differential equations and numerical integration. The Problem Solvers are useful in solving mathematical problems, such as heat conduction between coaxial cylinders, stress/strain behavior of a thick cylindrical shell, fluid flow in a channel, rate equations in a chemical reaction system and modeling of the pumping heart. A native version for Power Macintosh is available.

National Instruments; 6504 Bridge Point Pkwy.; Austin, TX 78730; 512-794-0100, 800-433-3488 or 512-794-8411 (fax)

HyperStat
Hypertext in statistics, program for data analysis and interactive simulation/data analysis exercises
Macintosh Plus or larger; 1 MB of RAM; HyperCard.

HyperStat is an integrated combination of a hypertext in statistics, a program for data analysis and a set of interactive simulation/data analysis exercises called "explorations." It is a statistics book that can do calculations and a statistical analysis system with a tremendous amount of online help. HyperStat's statistical procedures cover simple, as well as more sophisticated analyses. For instance, HyperStat has procedures for multiple regression and complex analysis of variance. The latter procedure can compute an analysis of variance with up to four between-subject variables and four within-subject variables. Other procedures emphasize graphics, such as box plots, stem and leaf plots, scatterplots, frequency polygons and histograms. HyperStat uses hypertext to provide more than 2,000 links between related concepts and between results of statistical analyses and explanatory material. The combination of hypertext and HyperStat's electronic index makes looking up information extremely easy.

IPSS And IPSS+
Statistical and simulation tool for projecting populations and related phenomena
Macintosh Plus or larger; two 800K disk drives; hard disk drive; IPSS+ requires the 68020/68030/68040 processor and 68881/68882 math coprocessor.

IPSS (Interactive Population Statistical System) is a sophisticated statistical and simulation tool for projecting populations and related phenomena. Users may plot changing demographics in market areas, study the demographic implications of growing or declining population in a region, or forecast that portion of product demand driven by changing population composition. IPSS' user interface allows models to be input by changing the graphs with the mouse where the numbers are automatically calculated, or where data values are known, the numbers may be input and the graph will be created. The output may be exported to any drawing program.

JMP Software, Version 3
Statistical data exploration and experimentation tool
Macintosh Plus or larger; 2 MB of RAM.

JMP Software, a statistical data visualization and experimentation tool for the Macintosh, presents statistics in a graphical environment so they can be easily understood. Data tables, in spreadsheet form, are dynamically linked to related graphs and tables. JMP statistical platforms include capabilities for performing univariate statistics, cross tabulation, inverse prediction, multiple and stepwise regression, analysis of variance and complex models, nonparametric tests, nonlinear fitting, multivariate, cluster, and survival analysis. JMP also offers graphics platforms for bar, pie and line charts, contour plots and ternary plots, along with quality control tools, such as Shewhart and Pareto charts. The software includes capabilities for a design of experiments in an easy-to-use graphical environment that features four types of classical designs: two-level, response-surface, mixture, three-level and mixed-level designs. Users can enter experiment factors and choose a design type and allow JMP to list appropriate designs and generate the selected design table. After completing an experiment, the software can thoroughly analyze experiment results. JMP software combines statistical analysis, statistical process control, experimental designs and data visualization into one powerful tool. JMP is available in single and network. Annual licenses are also available.

Lab Partner
Experimental design and analysis
Macintosh Plus or larger.

Lab Partner offers a systematic approach to experimental design and analysis based on the techniques and philosophy of Dr. Genichi Taguchi. It is designed to provide an efficient means to attack the problem of poor quality due to excessive variation. By using the analysis and design techniques provided in this program, users can uncover the source of variability and reduce or control this variability. The program provides an easy means of improving efficiency and decreasing the costs associated with experimental design and analysis. Features include: generation of experimental design for multiple factors; analysis of experimental results by means of Main Effects, Anova, Signal to Noise Ratio and S/N Anova; Anova 2 Factor design and analysis; Chi Square Test for single factor analysis; and Loss Function/Tolerance reports. Lab Partner is System 7 compatible.

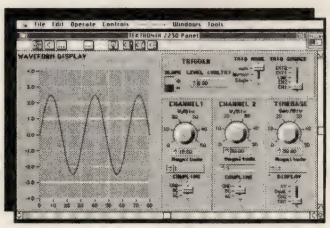
LabVIEW
Complete graphical programming system with built-in compiler for data acquisition, analysis, presentation and instrument control
Power Macintosh or any Macintosh with a coprocessor; 8 MB of RAM; hard disk drive; System 6.0.4 or later; 32-bit QuickDraw.



LabVIEW (Laboratory Virtual Instrument Engineering Workbench) is a graphical programming system for instrumentation. LabVIEW features a unique icon-based compiled programming language and user front panel interface for engineering and scientific applications. Users can build interfaces that make it quick and easy to train operators to use the software. Users program these virtual instruments (VIs) by building block diagrams. Users can acquire data from GPIB, VXI, RS-232 instruments, or from National Instruments plug-in data acquisition boards. Users can control more than 400 instruments by the ready-to-use icons in the Instrument Library. Analysis functions in LabVIEW include statistical processing, array manipulation and digital signal processing. Application areas include process monitoring and control, laboratory automation, instrument control, manufacturing automation, automated test, signal processing, simulation, design and classroom instruction. Users can execute complete VIs with run-time systems for run-only test stations or use the LabVIEW Application Builder to create stand-alone executables for distribution. Also available is the Test Executive Toolkit, a powerful, flexible package for automated sequencing of test programs. LabVIEW applications are compatible with LabVIEW running on Windows-based PCs and Sun SPARCstations. A native version for Power Macintosh is available.

Logit
Logistic regression for binary and multinominal dependent variables
Macintosh Plus or larger; Systat.

Logit offers logistic regression for binary and multinominal dependent variables estimated by maximum likelihood. The program allows observations to be weighted, analysis to be conducted by group, interactions to be entered directly on the model statement and dummy variables to be generated automatically using the Category command. A table is printed giving the estimated effect of changes in the independent variables on the probability of each level of the dependent variable. In addition, predicted probabilities may be saved to Systat datasets.

Systat, Inc.; 1800 Sherman Ave.; Evanston, IL 60201; 708-864-5670 or 708-492-3567 (fax)

MacSpin 3.0
Data analysis and scientific visualization program
Macintosh 512K or larger; external disk drive or hard disk drive; System 4.2 or later.

MacSpin is an exploratory data analysis and scientific visualization program. MacSpin helps users understand the meanings behind the patterns and associations in their data. By graphically depicting data in a three-dimensional space and viewing it from any angle, users can discover revealing distributions, subsets and influential outliers in their data. Animation and color allow for higher dimensional representation. MacSpin lets users easily define and save subsets of their data for further analysis. In additional to three-dimensional plots, MacSpin also displays two-dimensional plots: scattergrams, line charts, bar charts, histograms and pie charts. All charts and data are linked; clicking on a single point or a group of points in one plot highlights the same points in all other visible two- and three-dimensional plots and in the data window.

MathStatLib 3.0
Routines for sorting, matrix operations and statistical functions
Macintosh Plus or larger; QuickBasic.

MathStatLib contains routines for sorting, matrix operations and statistical functions. All routines are written in assembly language so they are very efficient in terms of both speed and space. Versions of the routines optimized for use with the 6888x series of floating point processors are included. These routines speed up numerical processing 1,000 percent or more. Sorting can be done in ascending or descending order. If desired, the sort routines will rearrange an additional array so there is a record of the original serial position of each element. Matrix routines include matrix addition, subtraction, multiplication and transposition. Users can even get the determinant and inverse of a matrix in a single statement. Statistical functions include the minimum, maximum, mean, standard deviation, t and Pearson's r. There are also statements that evaluate the cumulative z, t, X^2 and F distributions.

Matlab Statistics Toolbox
Data analysis and Monte Carlo simulation tools with interactive graphics
Macintosh with 68020 or 68030 processor/68881 or 68882 math coprocessor; 8 MB of RAM; Matlab.

The Statistics Toolbox integrates powerful, flexible tools for statistics and data analysis with the Matlab numeric computing and visualization environment. The Toolbox provides functions for probability distributions, random number generators, statistical graphics, linear models, descriptive statistics and hypothesis testing. Interactive graphics, provided by a set of GUI tools, make it easy to solve fundamental problems in statistics and probability. The functions in the Toolbox are Matlab M-files, which enable users to see the algorithms and implementations, as well as to make changes or create new functions to address a specific application.

Minitab Statistical Software
Statistical analysis
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.1 or later.

Minitab Statistical Software is a general-purpose, easy-to-use, interactive package for organizing and analyzing data, and reporting statistical results. Operated from menus (commands are optional), Minitab provides more than 180 statistical functions that operate on data that is stored in a row-by-column worksheet. Minitab can be used interactively or commands can be stored in files (macros) for frequently used analyses. The emphasis is on providing users with a wide range of basic and advanced functionality while maintaining high standards for ease of use. A hierarchical Help facility is included. A list of Minitab statistics are: basic statistics; regression analysis; statistical process control charts; analysis of variance and covariance, including GLM for unbalanced designs; multivariate analysis; cross tabulations; non-parametric methods; time series analysis; exploratory data analysis; simulation and distributions; and design of experiments. Color and high-resolution graphics are supported. A mouse is supported but not required. Minitab is also available for most mainframes, minicomputers, workstations and DOS-based microcomputers.

Monte Carlo Simulations (Advanced Version) 2.2
Statistical analysis, simulation and long-term projection
Macintosh 512K or larger; hard disk drive recommended.

Monte Carlo Simulations (Advanced Version) is designed for engineers, actuaries, financial planners, educators, medical researchesr and other scientists. Monte Carlo 2.2 includes the following improvements over version 2.0: new recursive variable for dependence between trials; more Macintosh printers supported (lasers, LQ, etc.); able to run from IBM subdirectories on any drive; and more tutorial-type examples, including new medical example. Monte Carlo consists of the following three integrated modules: Statistical Analysis Module (to compare raw data to 13 built-in probability distributions; Chi-Square and Kolmogorov-Smirnov Goodness of Fit Tests); Simulation Module (to construct a probabilistic model consisting of up to 100 Random/Logical/Functional/Recursive/etc., variables); and Long Term Projection Module (to create and analyze a true long-term random model; inflation and other adjustment factors can be applied).

Multivariate Analysis
Covers the major topics of the discipline
Macintosh 512K or larger.

This software package is intended for users who have had some formal training in the topic of multivariate analysis. The manual and the programs cover the major topics of the discipline, including multilinear regression, correlation analysis (including part and partial correlation between data sets), factor analysis (with Varimax and Quartimax rotations), principle component analysis, canonical correlation analysis and residual analysis. A set of population discriminant analysis programs is provided. Multiple population topics include Manova with and without a covariate. A full cross-tabulation program is included.

Probit
Provides a method for estimating a multiple regression model or analysis of covariance when the dependent variable is categorical and can take only one of two values
Macintosh Plus or larger; Systat.

Probit provides an appropriate method for estimating a multiple regression model or analysis of covariance when the dependent variable is categorical and can take only one of two values. It produces parameter estimates and standard errors by: the maximum likelihood, variance-covariance matrices, log-likelihood values, z-scores and Mill's ratios. The last two items may be optionally saved to Systat datasets. Probit is a full-featured maximum likelihood program with automatic generation of dummy variables and interactions.

Process Control Chart Tool Kit
Statistical graphing, charting, quality control analysis and graphs
Macintosh Plus or larger.

The Process Control Chart Tool Kit can be used to record numeric sample data and translate this data into graphs and charts. Features include: a method of entering and modifying numerical data; scatter plots; trend charts; histograms; P, NP, U and C control charts; Pareto charts; X bar R chart; standard deviation and process capability; and a method of generating files of random numbers. It is System 7 compatible.

QC Tools
Integrates a set of statistical process control analyses and graphs into StatView
Macintosh Plus or larger; 2 MB of available RAM; hard disk drive; StatView 4.01 or later; System 6.0.4 or later.

QC Tools is a seamless extension to StatView 4.0 — users just drop QC Tools into the proper folder and a "no compromise" set of statistical process control analyses and graphs are integrated directly into the program. New choices for subgroup measurements, individual measurements, p/np, c/u and Pareto analysis are available right alongside StatView's standard analyses. QC tables and graphs may be mixed with standard StatView analyses in the same view, and users have access to StatView's full data management and presentation capabilities. With StatView and QC Tools, users can easily save their work as templates that may be opened with any data. Templates make it easy for anyone from novices to experts to perform complex suites of QC analyses and produce high-quality reports.

Quality Control And Industrial Experiments
Quality control methods; a full implementation including all charts, Taguchi techniques and traditional techniques
Macintosh 512K or larger.

Quality Control and Industrial Experiments covers the standard quality control methods. All popular types of quality control charts have been implemented and the chart presentations conform to the ASQC standards. The statistical background of statistical quality control is discussed in detail, and all information relevant to the preparation of the charts is provided. A large section on the analysis of variance and the design of experiments is included; in particular, the Taguchi methods applying orthogonal arrays are described, as is the use of experiments in parameter design and tolerance design. The topics of the software cover all of the traditional methods of quality control, as well as the latest and most sophisticated techniques. Programs include QC charts; data entry and tabulation; distributions, inference and sampling; regression; analysis of variance; file transfers; and graphics and utilities.

RATS/RATS 020
Time series analysis
Macintosh Plus or larger; 1 MB of RAM.

RATS (Regression Analysis Time Series) incorporates virtually all time series techniques currently in use, including Arima models, vector autoregressions and spectral analysis. Not only for time series, RATS includes logit and probit and can easily handle the special problems of truncated and censored data sets. RATS can solve simultaneous systems with up to 999 equations, and can estimate and solve models that other programs cannot. Other features include: high-quality time series and X-Y graphics; many options, including dual-scale, size, orientation and high-low-close; exports to many desktop publishing programs; supports a wide variety of data formats; flexible transformations with algebraic formulas; trends, seasonal and time period dummies easily created; specialized differencing and filtering options; matrix computations by algebraic functions; user-definable menus; and much more.

Regression — Linear & Non-Linear
Simple linear regression, multilinear regression, ridge and weighted regression and regression using orthogonal polynomials; a full implementation of non-linear regression methods
Macintosh 512K or larger.

Regression is comprised of procedures based on the least squares technique. The program set includes simple linear regression, multilinear regression, ridge and weighted regression and regression using orthogonal polynomials. It covers the use of factor analysis in the selection of significant variables and includes a full implementation of non-linear regression models (exponential, sigmoidal, stochastic growth, yield density, etc.), including user-defined regression models.

Spreadware Statistics Menu
Provides a complete statistical application within Excel
Macintosh Plus or larger; Microsoft Excel.

Spreadware Statistics Menu (StatS) provides a complete statistical application within Excel. When using StatS, an easy-to-use menu is added to the Excel menu bar that provides the calculation of probabilities for z, F, t and chi-square distributions; descriptive statistics for frequencies, continuous and cross-tabbed data; non-parametric statistics; t-tests for independent and correlated data; Anova for one-way, two-way and repeated measures; correlations for pearson r, sscp matrix and correlation matrix; test analysis for alpha and split-halves reliabilities; item correction; test scoring; item analysis; and item frequencies. StatS has 100 routines available.

SPSS For The Macintosh
Data analysis software
Macintosh SE or larger; 2 MB of RAM (4 MB of RAM recommended); 20 MB of hard disk space; System 6.0 or later.

SPSS For The Macintosh is a sophisticated data analysis software package. Statistical routines include descriptive statistics, cross-tabulations, frequencies, analysis of variance, non-parametric tests, regression tests, multidimensional scaling, reliability and cluster analysis. The program will generate a variety of plots including histograms, bar charts, scatter plots, contour plots, box plots and stem-and-leaf plots. Data management facilities allow a user to reorganize, clean and transform data. Other facilities allow for labeling, weighting and formatting data for display. SPSS For The Macintosh enables a user to read data in a variety of formats including: fixed and comma delimited files; and hierarchical, grouped and mixed files. The program allows a user to aggregate, sort and merge files and write flat files to share with other software programs.

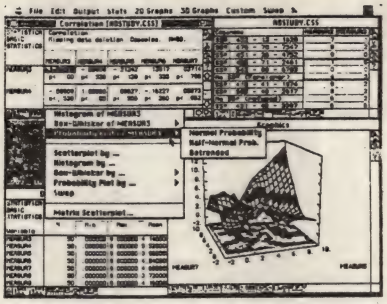
SQC For Excel 2.10
Complete SQC calculations, charts and reports within Excel
Macintosh Plus or larger.

SQC for Excel provides a complete statistical quality control package within Microsoft Excel. A comprehensive menu is added to the Excel menu bar that provides an easy interface via the Microsoft Excel menu bar (choose SQC from Excel main menu); X-bar, R, MR, S, X, P, nP, u and c control charts; Cpu, Cpl and Cpk calculations based on LSL and USL; comprehensive reporting of all calculations; one button operation for repetitive analysis; automatically checks the data for correlation; scatter diagrams for auto-correlation analysis; Microsoft Excel 4.0 and 5.0 compatible; plots histogram, normal distribution, LSL and USL; runs and trends calculations; and up to 16,000 data points. A complete set of examples for all charts are provided. It is System 7 compatible.
$149 retail; site license, educational and volume discounts available
BaRaN Systems Ltd.; PO Box 57024; Eastgate Postal Outlet; Sherwood Park, Alberta, Canada T8A 5L7; 403-449-6554 or 403-449-1334 (fax)

Statistica: Release 4
Integrated statistics/graphics analysis software
Macintosh Plus or larger; 1 MB of RAM.

Statistica is a comprehensive statistics and graphics package with database management facilities and a powerful data transformation language (System 7 savvy; supports Publish and Subscribe). It includes a large selection of analytic, exploratory and presentation graphics. All three-dimensional graphs can be dynamically rotated and customized on screen, and include



advanced implementations of scatterplots, box-plots, histograms, smoothed histograms, range plots, axis graphs, spectral graphs, line/sequence graphs, surface plots with color shading, data smoothing and others. Two-dimensional graphs feature a large spectrum of scatterplots, histograms, bar graphs, line graphs, trend graphs, box-and-whisker plots, range plots, frequency scattergrams, pie charts and multiple (categorized and matrix) plots. Statistica features a full range of basic statistics, crosstabulations, nonparametrics, stepwise multiple regression methods, comprehensive implementation of ANOVA/ANCOVA/MANOVA/MANCOVA, discriminant function analysis, canonical analysis, cluster analysis, factor/principal components analysis, log-linear analysis, reliability/item analysis, survival analysis, general nonlinear estimation and time series/forecasting.

Statistical Macro Package
Collection of 12 statistical analysis tools
Macintosh 512K or larger; Microsoft Excel.

The Statistical Macro Package is a collection of 12 powerful statistical analysis tools. These include: Linear & Nth Degree Regression, Equal Proporation Test, Normal Distribution, Binomial Distribution, Chi-Square Distribution, F-Distribution, t-Distribution, Repeated Measures, Mann Whitney, Correlations, Anova 1 and t-test.

Stats Tool Kit
Statistical analysis
Macintosh Plus or larger.

Stats Tool Kit is a software package used for recording sample data and generating various statistical-analysis reports. The program provides a method of entering and modifying numerical data; chi-square test; student's T-Test; Mann-Whitney test; one-way analysis of variation; two-way, no-repetitions analysis of variation; two-way, repeated-observation analysis of variation; kurtosis, moment and skewness; random data files; and more. A variety of statistical report types can be produced with the program and either printed out or displayed on screen. Stats Tool Kit is System 7 compatible.

StatView 4.0
Integrated data analysis and presentation graphing
Macintosh Plus or larger; 2 MB of available RAM; hard disk drive; System 6.0.4 or later.

StatView is an integrated data analysis and presentation system designed specifically for researchers and analysts. It integrates data management, statistical analysis, graphing and presentation tools into one powerful application. StatView replaces separate spreadsheet, statistics, graphing and drawing packages on the researcher's desktop. All analysis results remain dynamically linked to data — if changes are made in the data, charts and tables instantly update. Any StatView document (containing results, drawn objects and annotations) may be saved as a template and reopened with the original dataset or any data of interest.

StatView SE+Graphics 1.04
Statistical analysis with graphing
Macintosh Plus or larger; 1 MB of RAM; System 4.2 or later.

StatView SE+Graphics is a broad-based statistical analysis and graphing program. It performs complete descriptive and comparative statistics — all analyses are placed in an interactive graphing environment where they may be customized using drawing and text tools. StatView SE+Graphics is optimized for low-end Macintosh models (Macintosh LC and below).
$350 retail
Abacus Concepts, Inc.; 1918 Bonita Ave.; Berkeley, CA 94704; 510-540-1949 or 510-540-0260 (fax)

StatView Student
Statistical analysis and graphing program
Macintosh Plus or larger; 1 MB of RAM; two 800K floppy disk drives (hard disk drive recommended); System 4.2 or later.

StatView Student is a broad-based statistical analysis and graphing program. Ideal for students, it is powerful, yet easy to use. StatView Student performs a large variety of statistical operations, including complete descriptive statistics; frequency distributions; t-tests; Pearson correlations; simple, multiple and polynomial regression; one and two factor Anova; contingency tables; and two-group nonparametric tests. The graphs produced by StatView Student include scatterplots, line, pie and bar charts, histograms, box plots, regression plots, percentiles and univariate charts. Graphs can be customized by resizing, adding error bars and changing point types and sizes.

Strat/Range Charter 1.5
Stratigraphic range charting and statistical data preparation
Macintosh Plus or larger; 1 MB of RAM; System 6.0 or later.

Strat/Range Charter is a stratigraphic range charting application that can create large range chart diagrams and ordered species lists from text files containing lists of unique species numbers for each sample horizon. Diagrams can be saved as MacDraw PICT or transferred via the Clipboard to any Draw-type application. Text and graphic elements are MacDraw-like objects and can be edited with any PICT Draw-type application. Data is read in from text files that can be created with any word processor or text editor. Data entry is error checked. Diagrams can be sorted by tops, bases or the unique species number. Grid lines can be added, and the grid line spacing can be specified. Diagrams can be scaled at nine sizes. Color and abundance charts have been added to Version 1.5. Presence absence data is plotted with a bullet symbol (default), or any font symbol coded with the data can be plotted to indicate abundance, questionable occurrences, etc. Separate range charts can be created from the same data file by coding separate types of data with a unique prefix. Multiple species libraries can be maintained for different types of information. Species libraries can be used to create a database and can be updated from current databases. Strat/Range Charter also prepares presence/absence data matrices and ranked event data that can be used with other statistical software packages for multivariate and nonparametric analysis, respectively. The program is System 7 compatible.
$999 U.S. retail; includes Counter 2.0
Pierre Zippi, PAZ Graphics; 18640 Roads End Cir.; Eagle River, AK 99577; 907-696-5702

SuperANOVA
General linear modeling
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.2 or later.

SuperANOVA is a complete general linear modeling program. It analyzes virtually any model, including ANOVA, ANCOVA, MANOVA, MANCOVA, repeated measures and more. With SuperANOVA, users can create, modify and save model designs, as

These Products Available Through Bottom Line Distribution
1-800-347-1923

well as annotate them in a complete, interactive drawing environment. Once created, these models may be saved and applied to any data of interest. SuperANOVA handles balanced, unbalanced and missing cell designs. The program solves repeated measures (with up to 13 within factors) using univariate or multivariate models. Users may also choose from a dozen post-hoc tests, contrasts, interaction plots, residual plots and means tables.

Abacus Concepts, Inc.; 1918 Bonita Ave.; Berkeley, CA 94704; 510-540-1949 or 510-540-0260 (fax)

Systat 5.2
Comprehensive statistical analysis and scientific graphics package
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.2 or later.

Systat is a comprehensive statistical analysis and scientific graphics package that provides solutions from exploratory analysis to presentation graphics. Version 5.2 takes advantage of the powerful graphic and data display features of QuickTime, including full movie support of sound, video and animation. Versatile, yet comprehensive data analysis procedures permit almost every possible statistical analysis, including a complete implementation of the general linear model. Major statistical improvements include enhancements to model estimation and hypothesis testing with support of the means model. Stepwise regression output now has options for forward, backward and interactive stepping. Additional hypothesis tests include an intuitive method for arbitrary contrasts of effects or means, and new post hoc methods. Systat includes analytic improvements to graphs. In addition to standard graphs, plots, bar charts, histograms and scatterplots, Systat features dynamic color graphics. Statistical procedures include descriptive statistics, frequency distributions, t-tests, cluster analysis, analysis of variance, multidimensional scaling, nonparametrics, correlations, linear and multiple linear regression, forecasting and exponential smoothing, common factor analysis and nonlinear regression, with the capacity to analyze up to 256 variables.
$895 retail; volume/academic discounts and site licenses available
Systat, Inc.; 1800 Sherman Ave.; Evanston, IL 60201; 708-864-5670 or 708-492-3567 (fax)

Testat
Test summary statistics, reliability coefficients, standard errors of measurement and item analysis statistics
Macintosh Plus or larger; Systat.

Testat provides test summary statistics, reliability coefficients, standard errors of measurement for selected score intervals and item analysis statistics for multiple item tests. It will also provide summary statistics for individual respondents. The program features graphic displays of test and item/scale cumulative histograms and a Key command which allows a user to input scoring keys for multiple choice tests or bipolar scales. Additional features include save, by group and by subgroup for Systat datasets.

Systat, Inc.; 1800 Sherman Ave.; Evanston, IL 60201; 708-864-5670 or 708-492-3567 (fax)

Vector Rose 2.0
Circular normal statistics and rose diagram plotting package
Macintosh 512K or larger.

Vector Rose is an orientation analysis application that calculates vector (circular normal) statistics and plots a circular histogram for any set of angular data, or any data with a circular normal distribution. Statistics include: number of observations, maximum class frequency, percent maximum class frequency, class mode, mean, standard angular deviation, resultant amplitude, vector magnitude, percent vector magnitude, Rayleigh test z and F test. Diagrams can be saved as MacDraw PICT or transferred via the Clipboard to any application that accepts graphics. Text and graphic elements are MacDraw-like objects and are fully editable with any Draw-type application.

Features include: geological-styled rose diagrams (arcs) or flight-bearing style unit circles; unidirectional or bidirectional circular (rose) histograms, scaled relative to modal maximum (length or equal area), or scaled to 100 percent. Axis scales may be represented as concentric circles or as a vertical line with tick marks. Variable class intervals are 1, 2, 5, 10, 15, 20, 30 and 45 degrees. The reference position of North or 0 degrees can be rotated to any desired position. There are three modes of data entry: reading text files, Clipboard or keyboard. Keyboard entry allows single or multiple value entries. All data is error checked. Text may be placed anywhere on the diagram. Three help screens provide detailed information on the statistics and the operation of Vector Rose. Vector Rose prints high-quality output to a LaserWriter or an ImageWriter. Once in a Draw application, all elements of the diagram can be edited, and diagrams can be resized or graphically enhanced. Version 2.05 is System 7 compatible.
$145 U.S. retail

WormStat
Statistical analysis
Any Macintosh.

WormStat is designed as a general purpose statistical package and as a tool for helping students learn statistics. The program uses a MacPaint-like format. Data can be stored in rows and columns, entered from the keyboard or from a data file, randomly generated and transferred from a variety of other applications including most spreadsheet and word-processing packages. Once data is available various analyses can be carried out by clicking the appropriate tool from the MacPaint-like palette. Data can be saved, printed and transformed using various available menu options. A list of the program's statistical functions includes arithmetic mean, standard deviation, histograms, median, range, box-and-whisker plots, analysis of variance and more.

Vertical Markets/Textile Industry

Color'In
Textile design tool
Macintosh Quadra; 16 MB of RAM; color monitor (16- or 19-inch recommended).

Color'In includes all of the functions found in MultiColor, plus yarns and weaves for the creation of realistic-looking woven fabrics, including yarn dyes; a grid format for knits, jacquards and stitchery; and a unique "Colorway" Panel for the automatic creation of up to six colorways. It also includes AVL's color matching utility, Prism.
$17,500 retail
AVL Looms; 601 Orange St.; Chico, CA 95928; 916-893-4915, 800-626-9615 or 916-893-1372 (fax)

ColorBook
Coloring program
Macintosh color PowerBooks; 4 MB of RAM.

ColorBook is a coloring program for the color PowerBook. It reads AVL's own files and custom color lists for quick color changes. It saves files for use in other AVL software.
$2,000 retail
AVL Looms; 601 Orange St.; Chico, CA 95928; 916-893-4915, 800-626-9615 or 916-893-1372 (fax)

ColorMode
Textile mapping
Macintosh Quadra; 16 MB of RAM; 24-bit color monitor (16 or 19 inch recommended).

ColorMode is a 24-bit scanning and texture mapping program for the textile industry. It allows users to "drape" created or scanned fabric over a model or furniture frame. It is perfect for creating story boards or advertising displays.
$6,000 retail
AVL Looms; 601 Orange St.; Chico, CA 95928; 916-893-4915, 800-626-9615 or 916-893-1372 (fax)

■ **Compu-Cleaner**
Improves service for dry cleaning and laundry companies
Macintosh Plus or larger; FileMaker Pro runtime.

Compu-Cleaner is a program developed especially for dry cleaning/laundry companies that feature home delivery and pickup service, enabling them to provide better service to customers by utilizing computer speed, accuracy and efficiency. It handles billing, driver route manifests and customer payment status, which also incorporates fast-access "aging reports" showing balance-due status in 30, 60 and 90-day increments, which are displayed in columns for quick reference. The driver manifest includes instant data on customer delivery dates, addresses, route assignments and amounts to be collected. The program can easily be customized for firms that do not offer delivery service.

Design & Weave/Color
Textile design tool
Macintosh II or larger; 8 MB of RAM; 19-inch color monitor with 1,024 by 768 resolution and standard monchrome monitor.

Design & Weave/Color provides a textile design environment for woven textile design, offering a user a wide selection of tools and options to produce exquisite and complex fabrics. Features include: allows a user to view and revise finished color patterns on screen; prints out a pattern copy plus all of the technical information necessary to weave it; automatically computes plain weaves, twills and satins; combines two designs into one for the creation of extremely complex structures; performs repeats, symmetries and picking motions; designs up to 64 harnesses, 9,000 ends and 9,000 picks; zooms in and out to four different thread sizes; creates drawdowns and patterns for any loom; "weave painting" option allows users to paint weaves on screen with a simple click and drag; interfaces with the AVL Compu-Dobby and Staubli Electronic Dobby Systems; and more.
$10,000 retail
AVL Looms; 601 Orange St.; Chico, CA 95928; 916-893-4915, 800-626-9615 or 916-893-1372 (fax)

Fittingly Sew
Pattern making software
Macintosh Plus or larger; 2 MB of RAM; System 6.0 or later.

Fittingly Sew is a program for fitting and designing clothing patterns. In the fitting portion of the program, users enter a set of measurements (there is no limit on the size range) and Fittingly Sew drafts the pieces for a basic fitting shell or sloper. Once the accuracy of the measurements has been verified, users move to the designing part to develop the shell into a custom-fitted pattern. Specialized tools are available to transfer darts, reshape curves, add fullness, separate pieces (e.g., for yokes) or make facings. Seam allowances can be specified from 0 to 2 inches. Fittingly Sew prints to standard desktop printers — the output can be taped together to get a full-sized pattern. Fabric yardage is easily determined, and layouts can be printed. A demo version is available from Bartley Software Inc. and on various online services.
$149 U.S. retail
$189 Canada retail

Mac Off The Rack
Apparel management system
Macintosh Classic II or larger; 4 MB of RAM; 40 MB hard disk drive.

Mac Off The Rack (MOTR) is an apparel management system that is designed for the small to medium-sized apparel manufacturer/importer/distributor. Features include: sales order processing; allocations of finished inventory; multiple pick tickets per order; UPS-approved shipping system and manifest; invoicing; house and factored accounts receivable; factor chargebacks; salesperson and commissions (single and split); unlimited terms and credit codes; detailed customer records with multiple shipping addresses; vendors/contractors; pattern master with specifications; style master with construction

stage costing and raw material costing with ratings; finished inventory with quantities of ordered, open ordered, on hand, allocated, unallocated, WIP, ordered to cut, etc.; raw materials; cut tickets; bill of materials; and material requirements planning. The system includes the industry standard reports and supports 4D report generators, 4D Write and 4D Calc.
$7,000 retail; single user (multiuser price is dependent on number of users)
Bristol Soft; 11615 Eastshore Dr.; Hayden Lake, ID 83835; 208-762-2442 or 208-772-0612 (fax)

ModaCAD
Computer-aided design and manufacturing system for apparel and textile industry
Macintosh II, Centris or Quadra family.

ModaCAD is a computer-aided design and manufacturing system for fashion designers. It is an integrated productivity tool that allows designers and manufacturers to automate design sketching, draping and textile design. Features include: links all phases of design and manufacturing for increased productivity; full compatibility with existing CAD/CAM systems; a palette of 16.8 million colors; supports all familiar Mac icon drawing tools, pattern fills, pull-down menus and multiple window views; supports scanners, allowing importing and alteration of graphic images; and design/implementation in production of weaving textiles. Modeling and manipulation capabilities include: three-dimensional contour texture mapping; total auto-dimensioning; and an extensive library of historical designers, materials and trims. ModaCAD supports weaving machinery, color printers, scanners, video and film.
$12,500 retail; ModaCAD Design
ModaCAD, Inc.; 1954 Cotner Ave.; Los Angeles, CA 90025; 310-312-6632 or 310-444-9577 (fax)

Monarch Design System
Computer-aided design and manufacturing
Macintosh Quadra family; 12 MB of RAM; color monitor.

The Monarch Design System is a comprehensive, customizable computer-aided design system specifically addressing the needs of the apparel, textile, shoe, home furnishing and surface design industries. Applications and features include: Designing, Merchandising, Sales & Marketing (select designs from fashion libraries and/or create new ones; photorealistic draping of fabrics over scanned photographs); Textile Print Design (scan in/create and recolor textile prints; repeats; half-drops; offsets; and separations); Knit Design (automatic conversion of designs into color or symbolic graph output; stitch simulation; knitting machine interfaces); Woven Design (create woven designs accurately reflecting yarn crossings; generate peg and draft plans); Screen Printing (integrated screen print process from concept to screen separations); Data Management (organize design data; automates and organizes resource listings, costs and specs); and Image Management (organize, search and sort graphic database by user categories).
$12,000 starting price retail
Monarch Computex; 74-10 88th St.; Glendale, NY 11385; 718-894-8520 or 718-416-0330 (fax)

MultiColor
Design tool for printed textiles, surface design
Macintosh Quadra; 16 MB of RAM; color monitor (16- or 19-inch recommended).

MultiColor is a program specifically oriented for the design of printed textiles. It works with commonly used color scanners, throws designs into repeats (all "drops" — half, quarters, etc.) and prints out separations for all colors. Its most outstanding feature is the capability to reduce the number of colors in a scanned image. It includes AVL's color matching utility, Prism.
$10,000 retail
AVL Looms; 601 Orange St.; Chico, CA 95928; 916-893-4915, 800-626-9615 or 916-893-1372 (fax)

P.O.E.M. With P.O.E.M. Designer
Desktop embroidery
Macintosh LC or II family; 2 MB of RAM; System 6.0.7 or later; P.O.E.M. System from AISIN World Corp. of America.

The P.O.E.M. system is a personal desktop embroidery system. The software for this Macintosh peripheral allows users to either import images from various graphics software or scan in images at basically any resolution. The 4 by 4-inch embroidery area provides sufficient room to make very detailed embroidery. This 8 pound machine produces embroidery at 300 stitches per minute. It is an ideal system for light production, sample making and custom-made applications. PICT files can be embroidered on most fabrics. Standard software features include: create stitches on the screen; generate areas of stitches automatically; insert and delete stitches from anywhere within any design; reposition any single stitch within a design; move, rotate, mirror and duplicate any portion of a design; append designs; various search techniques; and two powerful stitching patterns. A PC version and hundreds of stock designs for both Macintosh and PC are available.
$1,498 retail
AISIN World Corp. of America; 24330 Garnier St.; Torrance, CA 90505; 310-326-8681, 800-822-2726 or 310-533-8271 (fax)

Punto 1.0
Design and editing software for embroidery machines
Macintosh II or larger; 6 MB of RAM; hard disk drive with 16 MB of free space; MacPlot Pen Plotter Standard or Professional to support pen plotters and/or GNT 4604 paper tape reader/puncher; System 7.0 or later.

Punto is a powerful embroidery design software package for the Macintosh environment. The program offers a simple-to-use, easy-to-learn integrated system. With Punto, users have the tools to create professional embroidery designs, logos and lettering with speed, accuracy and efficiency. Punto's extensive editing capabilities, including Bezier curve capabilities, enables the drawing of any complex artwork for outstanding embroidery designs. Users can create artwork from scratch, manually trace over scanned images with Punto's powerful drawing tools or, with the auto trace tool, automatically trace over black and white, gray-scale or colored scanned images. Once the image, or portion thereof, is converted into line art, users can choose effects, such as specifying pitch, stitch length, needle/color, tacking, start and stop points, etc. Punto automatically determines the optimum stitching routes. The stitch points can be displayed at any size and edited. Once satisfied with the design and layout, users can transfer the design to disk or paper tape. Punto includes all popular embroidery machine formats. Punto can also interface directly with single-head embroidery machines for small production or embroidery proofs.
$12,000 retail
SofTeam USA, Inc.; 3000 Chestnut Ave., Ste. 100A; Baltimore, MD 21211; 410-243-1130 or 410-467-9552 (fax)

Punto 1.0 Manager
Embroidery design package
Macintosh II or larger; 6 MB of RAM; hard disk drive with 16 MB of free space; MacPlot Pen Plotter Standard or Professional to support pen plotters and/or GNT 4604 paper tape reader/puncher; System 7.0 or later.

Punto Manager is a powerful embroidery design software package for the Macintosh environment. The program offers a simple-to-use, easy-to-learn integrated system. With Punto Manager, users have the ability to import embroidery designs, logos and lettering from the most popular graphics packages on the market. After converting the image, or portion thereof, into line art, users can choose effects, such as specifying pitch, stitch length, needle/color, tacking, start and stop points, etc. Punto automatically determines the optimum stitching routes. The stitch points can be displayed at any size and edited. Once satisfied with the design and layout, users can transfer the design to disk or paper tape. Punto Manager includes all popular embroidery machine formats. Punto Manager can also interface directly with single-head embroidery machines for small production or embroidery proofs.
$3,200 retail

Vertical Markets/Vehicle Management

Fuel Tax Specialist
Calculates fuel taxes for trucking businesses
Macintosh 512K or larger.

Fuel Tax Specialist is a program for trucking businesses that calculates fuel taxes in 48 states. Taxes owed or credits are distributed among the trucks in the business according to each truck's mileage and fuel purchases in each state. The program will print reports by state or by truck.
$1,400 retail; single user with Omnis 3 Plus Runtime
$2,900 retail; multiuser (requires Multiuser Omnis 3 Plus)
H&D Leasing; PO Box 1137; Clovis, NM 88101; 505-762-4139 or 505-769-3711 (fax)

Keep On Trucking
Maintains accounts receivable, payroll and settlement records for interstate trucking businesses
Macintosh 512K or larger.

Keep On Trucking maintains accounts receivable, payroll and settlement records for interstate trucking businesses. Users enter deadhead and loaded mileage codes and the program retrieves the codes for each trip with the same shipping and destination cities. The program bills the trip, load/unload charges and stop charges and automatically deducts an advance and brokerage fee from the amount billed. It also records advances and expenses for each trip. Drivers may be paid a wage, per diem and a drop pay. Paychecks are calculated using a cents-per-mile scale or a percentage of the load. Any amount owed to the business from the previous pay period is automatically withheld. The system will also calculate weekly settlements to owner/operators leased to the business' authority.
$1,400 retail; single user with Omnis 3 Plus Runtime
$2,490 retail; multiuser (requires Multiuser Omnis 3 Plus)
H&D Leasing; PO Box 1137; Clovis, NM 88101; 505-762-4139 or 505-769-3711 (fax)

MVP Advantage System For Car Dealerships
Car dealership management
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); 40 MB hard disk drive.

MVP is a powerful and easy-to-use system for running a car dealership. It is a comprehensive package with F&I, inventory management, prospecting, credit reporting, parts and service, customer follow-up, finance tracking, car rental and personnel scheduling modules. The integrated accounting system can handle the needs of even the largest multiple dealerships. The reporting and analysis module is extremely powerful with dozens of reports and graphs available at the click of a button. MVP is a fourth generation system, giving a car dealer many capabilities that are unavailable elsewhere. The proprietary CompuQuote system and graphical sales tools help increase sales and profitability. LendTrak automates the process of getting customers financed. MVP Pro is designed for new car dealerships. MVP Lite is for independent used car lots.

RentAll
Car and truck rental
Macintosh Plus or larger; 2 MB of RAM; System 6.0.7 or later.

RentAll brings a new level of power to car and truck rental agencies, automating the entire reservation, rental and exchange process. It is designed for ease of learning and use to boost productivity and reduce training costs for high-turnover counter positions. The comprehensive package provides invoicing, contracting, reservation, fleet management and maintenance. The optional integrated accounting system includes General Ledger, Accounts Receivable, Accounts Payable, Payroll and Inventory. The system tracks all payments, refunds and billings for each rental. It handles insurance and corporate accounts, and has extensive reporting capabilities. An exclusive Activity

These Products Available Through Bottom Line Distribution
1-800-347-1923

Calendar spotlights work scheduled or performed on any present, past or future date. RentAll maintains a complete record of all work performed on each vehicle and accumulated expenses. It alerts users when vehicle maintenance and oil changes are due, as well as when license tags expire. It allows an unlimited number of stored rate structures, accounts and vehicles. The network version handles up to 48 computers at any site and can connect multiple locations.

S.A.M. Lite
Automotive management
Macintosh Plus or larger; hard disk drive; ImageWriter II.

S.A.M. Lite is a computerized automotive service shop business management system. Lite will produce professional-looking estimates, worksheets and repair orders. It allows for automatic calculation of shop supplies and environmental recycling charges. It reminds users when prior recommendations exist on a vehicle, allowing them to increase sales. The program produces profit reports and productivity ratios, and sends service reminders and thank-you notes to customers. Lite is fully upward compatible with Smart Automotive Manager.
$99.95 retail
Integra Management Systems; 2525 Lawndale Rd., Ste. C; Kenwood, CA 95452; 707-833-1823 or 707-833-2596 (fax)

Smart Automotive Manager III
Automotive garage management and marketing system
Macintosh Plus or larger; hard disk drive; ImageWriter.

Smart Automotive Manager III is Integra Management Systems' mid-range management and marketing system for automotive garages. Smart Automotive III writes professional estimates and repair orders, notifies service writer of prior recommendations and scheduled maintenance on vehicles, allows for automatic calculation of environmental recycling charges and shop supplies, shows estimated profit as a repair order is written and recalls years of detailed service history at the click of the mouse. Smart Automotive Manager III includes Inventory Control, Order Entry, Labor and Job Codes, customer follow-up, profit reports, technician productivity reports and much more.

Smart Automotive Manager IV
Automotive repair shop management and marketing
Macintosh Plus or larger; hard disk drive; ImageWriter II.

Smart Automotive Manager IV is the top-of-the-line management and marketing system for automotive garages and other types of repair and service businesses. It writes professional estimates and repair orders, notifies service writers of prior recommendations and scheduled maintenance, calculates environmental recycling charges and shop supplies, shows estimated profit as a repair order is written and quickly recalls years of service history. The program includes a point-of-sale module for parts sales. It allows multiple pricing levels to price sales to retail customers, dealers, jobbers, distributors and other trade accounts. Purchase orders features a "best pricing" option that searches for the lowest cost from vendors. An integrated Accounts Receivable and Accounts Payable prints customer statements and writes checks. Customer follow-up and marketing is easily accomplished by generating postcards, mailing labels and mail merge documents. Shop profitability, productivity ratios, tax reports and daily recaps are printed quickly and easily. A powerful General Ledger module allows users to see their company's economic health in a minute. Smart Automotive even talks to users in a clear, human voice.
$3,495 retail; single user (multiuser available)

Transportation Workorder/Dispatch Logging/Billing
Tracks workorders
Macintosh II; 13-inch monitor; Omnis 5 or runtime.

Transportation Workorder/Dispatch Logging/Billing (TWDB) is designed to track workorders for local and road trucking services. Workorders are entered, printed and maintained in an active queue. As they are dispatched, a log entry is made recording truck/driver, identification numbers and movement leg. Multiple invoices can be generated for each workorder and may be tied to the Great Plains Accounting System for accounts receivable, cash management, payroll, accounts payable and general accounting. Dispatch logs may be printed for each workorder and for each driver to generate compensation worksheets for company owned and owner operated trucks. TWDB also provides historical information by chassis and container numbers for research. All installations include customization, training and support.
$15,000 to $20,000 retail
O.Sage Consultants, Inc.; 802 Soboda Ct., Ste. 200; Houston, TX 77079; 713-493-5949

Truck Tracker
Simplified business management for the trucking industry
Macintosh Plus or larger.

Truck Tracker manages nearly every aspect of a small to medium size interstate trucking company. The program is intended to enable carriers with two or more trucks to better manage their equipment and manpower. Truck Tracker provides functions to assist in dispatching, load management, customer invoicing, driver and equipment assignments, driver expense reporting and payroll. Freight bills and checks for expense and payroll are generated and can be printed at any time. Fuel consumption can be tracked against both vehicles and drivers. Maintenance records are printed for insertion into the log book. The program handles leased equipment and non-payroll drivers, as well as loads brokered to other carriers. On demand reports help discover areas of inefficiency, excessive expenses or other areas important in trucking operations. Data can be charted or graphed for comparative or other reasons.

■ **Used Vehicle/Vehicle Salvage**
Keeps used vehicle and salvage inventory
Macintosh Plus or larger (68030 processor recommended); 2 MB of RAM; System 6.0 or later (System 7.1 recommended); hard disk drive.

Used Vehicle/Vehicle Salvage is two independent files. Used Vehicle file allows users to keep track of their used vehicle inventory. Vehicle information, along with two photos for each vehicle can be entered. Asset reports, asset listings, sales reports and sales listings can be generated. Vehicle Salvage file is designed to help vehicle salvage owners keep track of the salvage inventory. Detailed information about vehicles and parts, along with two photos and lot location can be entered. Included are general data, body parts, electrical parts, drive train parts, chassis parts and engine parts layouts. A financial assets summary can be generated and users can perform parts "Finds."

Vertical Markets/Other

Accession 2.1
Collections management for museums and private collections
Macintosh Plus or larger; hard disk drive recommended.

Accession is a specialized database designed to catalog and retrieve collections data for art, history, archives, natural history, archaeology, geology, etc. Specialized fields are used to provide maximum flexibility and accuracy of data organization and rapid data entry and retrieval. Major groups of data, such as donor or artist information, and actions, such as loans or conservation, are stored in separate files and linked to the catalog entries. A search window showing all data fields permits direct entry of multiple criteria for any set of records. In the "Report" mode, users can also specify details, such as the sorting and grouping order, and include data from related files. The resultant report can be printed directly or exported to a word processor. Options include image capability and a multiuser version. Data import from other databases and customization for any type of collection are available.

Apparel Industry BOSS
Business management system for apparel industry distributors
Macintosh with 8 MB of RAM.

Apparel Industry BOSS is a complete business management system offering integrated accounting for apparel industry distributors with complex inventory control and pricing needs. Inventory control includes unlimited price levels and vendors per item, styles, colors, sizes with separate lot costing and pricing, real-time updating of lots across warehouses, pick tickets and cut tickets for production, materials tracking by unit measure as utilized in production, purchase orders

generation by just-in-time fulfillment, alert quantities and drop ship. Features include multiple shipping addresses, multiple warehouses, individual/batch processing, matrix entry for entry of sizes/colors within styles and purchase order conversion from sales orders with job costing. It allows invoice detail, access to fabric or pattern graphics/specs during orders, just-in-time orders, "quote" and "hold" orders and automatic backorder handling. It offers a Prospects file for lead tracking, Salesforce module, end-user registration tracking, customer product purchase history, daily sales tracking, geographic marketing analysis and complete office management.
$10,000 retail
MicroWorks Businessworld, Inc.; 305 Riverside Dr., Ste. 4A; New York, NY 10025; 212-932-0001 or 212-316-0399 (fax)

ArtStacks
Fine art management software
Macintosh II or larger; System 7.0; 8 MB of RAM.
ArtStacks is a fine art management program for galleries, collectors and artists. Based on HyperCard, it is visually oriented and very easy to learn and use. The interactive stack design allows for proper information management without having to repeat needless tasks. For example, when a sale takes place, the work is transferred from Active to Sold Inventory; the client's card in the Mailing List is updated; the Invoice is written; and the Account Card is credited. The program allows each user to modify it to best meet their needs. Easily customized reports include the slide labels, wall labels, price lists, insurance reports, client summaries and accounting reports. The inventory cards can also have high-resolution color images attached to them for fast visual reference. The program includes installation, training and one year of support. Image and data entry, as well as data conversion services are also available.
$4,500 to $8,000 retail
ArtStacks; 57 Marguerite Ave.; Mill Valley, CA 94941; 415-388-6917 or 415-389-6172 (fax)

Auto Scheduler
Sports scheduling
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.3 or later.
Auto Scheduler is sports scheduling software that automates the complex league scheduling process. It can be used to schedule any sporting activity or competition, from team events like softball or baseball, to individual competitions like tennis or racquetball. The program automates the scheduling of games for one or more leagues, for any sport. The Facility File can be user defined to schedule ball fields (soccer, football, baseball, softball, etc.) or courts (basketball, racquetball, tennis, etc.). Additional files can be set up for additional fields or courts to create multiple schedules. Schedules are balanced as to home/visiting games, times, etc. If playing on multiple fields/courts, randomization will balance and spread teams/players evenly across available times and fields/courts. With multiple choice pull-down menus and button objects, printing schedules and displaying the data in various user-definable forms are implemented with great ease.

Catalog And Ordering System (COS)
Electronic catalog
Macintosh II family; 5 MB of RAM.
The COS software system allows users to create electronic catalogs, such as Display Net. The COS Data Entry Tool is used to input and link digitized catalog graphics with associated text data. The COS Publishing Tool creates and organizes the catalog pages using the combined graphic(s) and text data prepared by the Data Entry Tool. The Publishing Tool also builds the graphic navigation structure of item categories from which items may be located and a search dialog for finding items using numerous criteria. The COS Catalog Viewing Engine is the application that allows users to read and use the catalog. It provides the driving software and routines for the catalog functions, including viewing, searching, selecting, comparing, modifying, ordering and administrating, as well as providing user help and automatic telecommunications.

ClearLogistics
Field service inventory management
Macintosh II or larger; 6 MB of RAM; MacTCP software.
ClearLogistics is part of Clarify's comprehensive Customer Service Management System, a client-server application for managing a service and support business. ClearLogistics efficiently manages service-related inventory, maintains part-quality information and tracks the costs associated with service repairs. ClearLogistics manages inventory to user-defined minimums at user-defined stock locations. Field engineers and logistics personnel use ClearLogistics to check for spare parts availability, transfer parts, determine and manage inventory levels, generate and track RMAs and log repair activity. ClearLogistics tracks cost information by product, subassembly, part and serial number and uses this information to calculate the cost of repairs, inventory valuation and other financial and accounting measures. ClearLogistics provides interfaces to billing, financial and MRP systems. Clarify products are easily customizable for each organization's business. They run on PCs running Windows, Macintosh computers and Unix systems running Motif. ClearLogistics integrates with ClearSupport, Clarify's technical support applications and ClearQuality, Clarify's defect tracking application.

ClearQuality
Defect tracking system
Macintosh II or larger; 6 MB of RAM; MacTCP software.
ClearQuality is part of Clarify's comprehensive Customer Service Management System. ClearQuality is a defect tracking system used by product development and support organizations. It records all defect-related information, such as priority, severity, product module and description. ClearQuality maintains complete history of each defect or change request throughout its lifetime. Users can attach code samples, debugging files or other diagnostic aids. ClearQuality insures problems are addressed by tracking ownership and deadlines. Users can locate and monitor trends on existing defects using its built-in query tool. Clarify products are easily customizable for each organization's business. They run on PCs running Windows, Macintosh computers and Unix systems running Motif. ClearQuality integrates with ClearSupport, Clarify's technical support application and ClearLogistics for service inventory management.

Clarify Inc.; 2702 Orchard Pkwy.; San Jose, CA 95134; 408-428-2000 or 408-428-0633 (fax)

ClearSupport
Customer service
Macintosh II or larger; 6 MB of RAM; MacTCP software.
ClearSupport is part of Clarify's comprehensive Customer Service Management System. It is a client-server application for managing a service and support business. ClearSupport solves today's service challenges, such as high-volume call tracking, intelligent problem solving, service contract verification, customer configuration management and easy report generation. ClearSupport is the primary environment for handling customer calls (aka "cases"). It allows service professionals to create and log cases, set priority, route them within the organization, review the customer's history and track time and expenses associated with each case. ClearSupport's expert system module for matching problems and solutions insures that recurring problems are recognized and not solved over and over. It insures that customers get consistent, traceable answers regardless of who helps them. Clarify products are easily customizable for each organization's business. They run on PCs running Windows, Macintosh computers and Unix systems running Motif. ClearSupport integrates with ClearQuality, Clarify's defect-tracking applications and ClearLogistics for service inventory management.

Macintosh Business Systems, Inc.; 3 Country Ln.; Mamaroneck, NY 10543; 914-698-7215

CurrenTides
Predicts ocean tides and currents
Macintosh Plus or larger; 1 MB of RAM.
CurrenTides is a software module that predicts ocean tides and currents at selected locations for graphical displaying on Macintosh computers. The software can operate in a stand-alone mode, or can be used in conjunction with the company's existing Navigate! software. The program uses the harmonic method, which studies the tides or currents at one location for about one year. Each day the tide is measured many times, and the measurements are processed to extract the influence of the sun and moon on the tides or currents at that location. The motion of the sun and moon is predictable. This motion and its effect on measured tides and currents are used to predict future tides and currents. CurrenTides draws a graph that shows the height of the tide or speed of the current during a one-day or multiple-day period. The sunrise and sunset times and the phase of the moon are calculated and displayed on the graph.
$150 retail

ERMS
Emergency resource management system
Macintosh II or larger; hard disk drive.
ERMS is a stand-alone system for managing emergency resource personnel and equipment. Equipment and personnel can be assigned to teams during an incident and placed in stand down status when necessary. Call out and arrival of personnel and equipment can be tracked in real time. All equipment is tagged by Owner, Location, Area (OLA) and equipment type. Four complete screens provide for dozens of descriptive fields tailored to the emergency response organization. Personnel records track skills, training, ICS positions, organization and response team membership. The complete database can be exported and merged with other databases from various emergency organizations within a geographic region. Dozens of reports and an ad hoc report generator make ERMS the tool of choice for government agencies, petroleum and chemical industries and any emergency preparedness organization. ERMS is cross-platform; data can be shared by Macintosh computers and PCs.

Food Industry BOSS
Business management system for food distributors
Macintosh with 8 MB of RAM.
Food Industry BOSS is a complete business management system offering integrated accounting for food distributors with complex inventory control and pricing needs. It includes unlimited "lots" per item based on freshness, quality or supplier, real-time lots updating by warehouse, unlimited price levels and vendors per item, tracking and sales by piece, case, block or pallet, trucking management via picklist over special routes or delivery zones and generation of purchase orders based on alert quantities or just-in-time fulfillment. It tracks contracts for import/export. Features include multiple shipping addresses, multiple warehouses, individual/batch processing, invoice detail with unit measures, pricing per ounce, kilo, etc., and weights/measures entry, unique quick line item entry, drop shipping, "quote" and "hold" orders, automatic backorder handling and order item shipping by warehouse, ship date, refrigeration, etc. It includes a separate Prospects file for lead tracking, Salesforce module, customer product purchase history, daily sales tracking, geographic marketing analysis and complete office management.
$10,000 retail
MicroWorks Businessworld, Inc.; 305 Riverside Dr., Ste. 4A; New York, NY 10025; 212-932-0001 or 212-316-0399 (fax)

Football Scouting And/Or Stat Tracking
Tracks a wide range of statistics that can be used to determine strategies against opposing teams
Macintosh Plus or larger; 1 MB of RAM; System 6.0.3 or later.
Football Scouting tracks a wide range of statistics that can be used to determine strategies against opposing teams. Users can track their own players' capabilities against other teams under a multitude of conditions and circumstances. The program provides presentable data for planning both offensive and defensive strategies. A powerful, easy-to-use Report Editor enables users to design their own custom reports for printing. Customizations for specific needs are available under binding estimate. Data can be imported

from an existing database, such as FileMaker Pro or Microsoft Works. It is System 7 compatible.
$249 retail
Amalgamated SoftWorks, Ltd.; 1600 18th Ave. NE; PO Box 18084; Minneapolis, MN 55418; 612-649-4481 or 612-788-8759 (fax)

Fully Automatic
DXF, Illustrator and text files that detail the conversion of semi-automatic weapons
Macintosh Plus or larger; System 6.0.2 or later.
Fully Automatic is a set of CAD, Illustrator and text files that detail the conversion of many popular semi-automatic weapons to fully automatic operation. The DXF files may be imported by most of the popular computer-aided design applications. The Illustrator files show modification details. The text files describe the modifications.

Survival Software; PO Box 43; Oceanside, CA 92049; 619-439-4564

Gallery-Wise
Gallery management
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.
Gallery-Wise is an information management system for art galleries (and similar businesses). Its crystal-clear, no-nonsense design provides intuitive access to the information a gallery needs every day. Gallery-Wise maintains mailing and inventory lists and the all-important relationships between them. Clients can be listed in order of total purchases, and artists in order of total sales. The mailing list includes each person's interests and purchases. The "Contact List" report shows all clients interested in a given artist or topic. Inventory tracking includes works owned and consigned, past and present. And of course Gallery-Wise generates mailing labels, invoices, consignment forms and insurance reports.
$1,750 retail; demo disks available
Roy Sablosky Design; 21 Brookmont Cir.; San Anselmo, CA 94960; 415-454-5771

Gift Industry BOSS
Business management system for gift industry distributors
Macintosh with 8 MB of RAM.
Gift Industry BOSS is a complete business management system offering integrated accounting for gift industry distributors with complex inventory control and pricing needs. It includes a Prospects file for lead tracking, Salesforce module, customer product purchase history available during order entry, daily sales tracking, geographic marketing analysis and complete office management. Features include multiple shipping addresses, multiple warehouses, individual/batch processing, invoice detail, assembly/package production, unique quick line item entry, drop shipping, just-in-time ordering for inventoried items not on hand, "quote" and "hold" orders and high-speed backorder handling. Inventory control includes unlimited "lots" per item with pricing for each lot, real-time updating of lots across warehouses, unlimited price levels and vendors per item, case and casebreak capabilities, generation of purchase orders based on either alert quantities and drop ship commitments or just-in-time fulfillment. It provides access to item graphics or schematics during ordering and purchasing, and tracks contracts for import/export.
$10,000 retail
MicroWorks Businessworld, Inc.; 305 Riverside Dr., Ste. 4A; New York, NY 10025; 212-932-0001 or 212-316-0399 (fax)

Harbor Master
Ocean tide and tidal current predictor
Macintosh Plus or larger.
Harbor Master predicts ocean tides and tidal currents. Harbor Master covers the east, west and gulf coasts of the United States, plus Canada, Hawaii and Alaska. It shows the sunrise and sunset times, along with moon phase. All data can be shown both graphically and in a text format. Harbor Master draws a curve that shows the height or motion of the water throughout the day. Highs, lows or floods, ebbs and slacks can be annotated. The graph is shaded to show sunrise and sunset times. Calendars can also be created.
$50 retail; per region per year
Zihua; PO Box 51601; Pacific Grove, CA 93950; 408-372-0155, 800-659-0155 or 408-372-4862 (fax)

LS-Flights
Aircraft and pilot management, including charter billing
Macintosh LC or larger; 2 MB of RAM; hard disk drive.
LS-Flights is a multiuser system for companies that manage a fleet of aircraft. The system includes an extensive list of airports and FBOs. It allows production of trip and flight logs and full management of aircraft and pilot operations. LS-Flights is an Omnis 5 application. The optional multiuser integrated accounting package offers an extended General Ledger and Accounts Payable, Accounts Receivable and Inventory Control functions. The Inventory includes its own billing for operations providing repair and maintenance work on aircraft. The two systems are separate applications that easily exchange data through automatic data transfer.

MacGas
Gas station management
Macintosh Plus or larger; 2 MB of RAM; hard disk drive; System 6.0.4 or later.
MacGas is a user-friendly gas station management system, primarily designed to manage fuel pumps and fuel storage tanks. Up to 99 pumps can be configured for cash and credit prices. Inventory fuel purchases consist of Super, Special, Regular, Diesel and Kerosene. Pre-configured tank charts make daily reconciliation simple. Convenience store and miscellaneous inventory items can be accounted for. Invoicing of house accounts, with aging, and a daily recap of business cash flow, covering gas, sales tax and four additional custom categories are provided. Daily deposits and expenses are tracked and an overage/shortage is calculated. Reports include daily, monthly and yearly closing information, pool margins (WAM), pump and tank histories and accounts receivable.
$1,295 retail
Demo disks are available
Custom Information Resources; 9 Swallow Lane; Huntington, NY 11743; 516-692-4963 (phone/fax)

Macintosh Airline Terminal
Connects to SABRE, APOLLO and other reservation systems
Macintosh Plus or larger (Macintosh LC or larger required for Gateway Macintosh); 2 MB of RAM; hard disk drive; System 6.0.5 or later.
Macintosh Airline Terminal gives a Macintosh full airline terminal functionality. The system consists of an ALC communications card installed in a "gateway" Macintosh, terminal emulation software installed on each "terminal" Macintosh and an Application Programmers Interface (API) that enables an airline to develop custom applications that access an ALC host.
The Gateway consists of a synchronous communications card and software drivers. A single Gateway supports as many as three interchange addresses (IAs) and 90 terminal addresses. The Terminal Emulator software allows multiple terminal windows on one TA and multiple TAs on one Macintosh; provides programmable function key and save session to disk capabilities; supports ticket printing, invoice/itinerary printing and memo item printing; allows host output to be directed to a disk file rather than to a printer; is MultiFinder compatible; delivers full Macintosh desktop support, including cut and paste, windows that are resizable and movable, full mouse positioning and text selection; and standard Macintosh command key functions. The API permits applications to be written in HyperCard, Pascal or C to automatically submit data to, extract data from or interactively exchange data with the ALC host. Macintosh Airline Terminal is System 7 compatible.
$2,933 retail; for Gateway supporting six TAs
$4,973 retail; for Gateway supporting 12 TAs
$7,353 retail; for Gateway supporting 24 TAs

MacPedigree
Pedigree system for dogs and more
Macintosh Plus or larger; 1 MB of RAM; 20 MB hard disk drive; System 6.0.5 or later.
MacPedigree is a complete application for dog breeders. It allows the storage of complete information for each dog, including medical information, litter summary and detail information, as well as show information and expenses. MacPedigree allows for printing of AKC Show entry forms and Field Trial forms, Pedigrees to five generations, Trial Pedigrees, mailing labels, show point summaries, expense reports, judging reports and much more. Printing is compatible with all Apple and HP printers.
$160 retail; only sold to retailers in quantities of 15 or more
The Willow Group; 654 Dorothy Ave.; San Jose, CA 95125; 408-993-8394

MacPETigree
Maintains pedigree information and other detailed animal records
Macintosh 512K or larger; hard disk drive recommended; System 6.0 or later.
MacPETigree maintains animal pedigree information and other detailed animal records. The program provides an easy way to store and organize pedigree and medical records, as well as such information as breed, birthdate, litter number, markings, mates, offspring and show awards. Version 2.2 automatically generates binary family trees and provides a simple way to add new members. Each page of the binary family tree contains five generations, with no limit to the number of generations that can be recorded. Other features include a simplified online help function, easy-to-use menu system and an update feature (hard link) for quick duplication of data.

MdB — Music Scheduler
Radio station music scheduler
Macintosh 512KE or larger.

MdB — Music Scheduler allows a radio station to enter the station's music library into the database, build programming format clocks, slot the clocks into specified hours and schedule songs in a specific order for disc jockeys to play. As the program does the scheduling, it observes and obeys format rules determined by a user, such as separation and flow of song styles, gender and tempo considerations.

Diversified Computer Applications; PO Box 1142; Du Quoin, IL 62832; 618-357-3619

Navigate! 3.2.3
Digital chart navigation system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Navigate! is a digital chart navigation system. The program uses digitally encoded nautical charts that can be zoomed to display offshore waters and coastlines or highly detailed harbors, complete with buoys, lights and navigational hazards. Each chart disk contains chart data for a 2,500-square-mile area. Using the Macintosh, a navigator selects the area in which the boat will be sailing and plans the route to be taken graphically on screen. The program automatically calculates the distance and compass headings between each series of waypoints created on the screen. Each waypoint is a specific latitude/longitude position on the chart that typically defines a location where the vessel will change direction. Through an interface between a navigation radio receiver like GPS/Loran and the Macintosh, the program displays the actual vessel position graphically in relation to the chart information. Navigate! is intended to be used aboard power and sailing yachts from 30 feet and above in length. Charts are available for all of North and South America. Call for additional areas.
$295 retail; includes one chart area
$95 each retail; individual digital area charts
$395 retail; regional chart sets
Fair Tide Technologies, Inc.; 18 Ray Ave.; Burlington, MA 01803; 617-229-6409, 800-732-3284 or 617-229-2387 (fax)

OAG FlightDisk
Travel information
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0 or later; printer (optional).

The Official Airline Guides FlightDisk allows easy access to North American air travel information. Updated monthly, OAG FlightDisk contains detailed flight schedule information; frequent flyer/frequent lodger program facts; and airline, hotel and car rental phone numbers.
$199 retail; 1 year (12 monthly disks)
Official Airline Guides, Inc.; 2000 Clearwater Dr.; Oak Brook, IL 60521; 708-574-6000 or 708-574-6091 (fax)

Office Services Inventory System
Manage office installation within a corporation
Macintosh II or larger.

The Office Services Inventory program was created for companies or organizations that have their own office installation and services department. It is a tool designed to assist in the management of office installations and reconfigurations. This system will track work requests, manage inventory and provide for the allocation and tracking of inventory to work requests. The program has been designed to track the inventory from most of the major brand name office furnishings vendors in the industry. This database is a tool that helps manage information about: inventory, purchase orders, work orders, shipments, costs, time sheets, employees, vendors, projects and cost centers.
$3,995 retail; single user (one-year free telephone support)
$200 per user retail; multiuser
AD/C Solutions; 1445 Grant Rd.; Los Altos, CA 94024; 415-969-3979

Precision Investigation Billing System
Private investigation case management
Macintosh Plus or larger; hard disk drive; ImageWriter.

Precision Investigation Billing System (PIBS) software has been specifically designed for use in private investigation firms. It makes full use of the Macintosh user interface for ease of learning and use. PIBS provides a fast, comprehensive and organized method for maintaining current records relating to the management of private investigation cases. It provides for the input of time and expense records. These records may then be grouped together to form invoices and client bills generated. Client bills are automatically aged as time passes. Client, employee and insurance agent databases allow users to maintain up-to-date information on a company's operations. PIBS makes updating this information quick and simple. A powerful report and letter generator is available in PIBS. A criteria selection process allows users to view any cross section or particular aspect in a database. PIBS reduces the amount of data duplication. PIBS keeps claim information in an easy-to-manage format. Personalized form letters, labels and Rolodex cards may be generated to clients. Multiuser capabilities are already programmed into PIBS.
$995 retail
Precision Computer Systems; 1130 E. University Dr., Ste. 205; Tempe, AZ 85281; 602-829-3131 or 602-829-3133 (fax)

Profex
Transport agent's system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.3 or later.

Profex is a multiuser billing and load tracking system for shipping agents. The database system built into Profex allows entry and maintenance of customers, carriers, shippers, consignees, rates and quotes. Data entry is simple and intuitive, and there is no limit to the amount of information that can be stored. Load booking and invoice generation have been streamlined for maximum throughput. Customized invoices are printed and railroad routing sheets are automatically generated. Profex also has a simplified, double-entry accounting system built in. Billings are generated automatically, and accounts receivable, accounts payable, expenses and income are automatically updated. Bank accounts are also tracked, and Profex allows operation in both Canadian and U.S. dollars. Profex has extensive reporting capabilities.

Public Relations Manager 3.0
Data management system for public relations offices and agencies
Macintosh Classic or larger; 4 MB of RAM; hard disk drive; System 7.0 or later.

Public Relations Manager is a data management system for use in a corporate PR office or an external PR agency. It includes files for managing mailing lists, media contacts, publication production, photo archives and press releases. The mailing list module offers an extensive array of keyword capabilities. Mailing list and media records may be queried via a map using GeoQuery software (included), providing an ideal way to find appropriate contacts in unfamiliar areas. The publications module allows entry of the many subtasks that make up an overall project. Planned and actual start and end dates, as well as planned and actual costs, may be attached to each task. Task data may be charted in Great Gantt! software to provide a visual representation of a project's progress. Integrated word processing is available in all modules. Public Relations Manager is based on 4th Dimension. A special version, College Relations Manager, is available for use in the higher education environment.
$1,495 retail; multiuser pricing upon request
$20 retail; demonstration kit
Desktop Solutions Inc.; PO Box 189, #191; Etters, PA 17319; 717-938-4270

QuickLook Shipper
UPS shipping program
Macintosh Plus or larger; System 6.0.3 or later.

QuickLook Shipper is designed for businesses that do UPS shipping but average less than the 20 or so packages a day needed to justify using a full UPS manifest system. It works as a fast shipping charges calculator that can work as a desk accessory under System 7. It handles both domestic and international UPS shipping. Features include: minimum, maximum, percentage handling charge; fixed amount handling charge; finds UPS USA rate and zone from the Zip code entered; allows all UPS shipping types; handles Saturday delivery charges; GroundTrac charges; COD charges; Blue label letter packages; allows users to add handling charges by fixed amount; percentage handling charges with minimum and maximum; UPS Ground and Air USA; UPS Ground and Air Canada; UPS International Air; computes dimensional weights; rate charge for shipping originating in any of the 48 contiguous states; and fast "c-tree" filing system.

RadioView
Broadcast management system
Macintosh Plus or larger.

RadioView is a broadcast management system designed to meet the needs of station management and staff and corporate management. Systems are available to serve the needs of any size operation. RadioView provides Accounts Receivable, traffic scheduling and logging, and sales management for broadcasters. It takes full advantage of the Macintosh and offers the power to meet every standard that serious broadcasters demand, such as breakneck scheduling speed; flexibility; more than 100 reports that can be sorted any way needed; extensive graphing and analysis capabilities; and the capability to process and make sense of the most intimidating mountain of information.
$5,900 starting price retail
Nordic Software, Inc.; PO Box 6007; Lincoln, NE 68506; 402-488-5086 or 402-488-2914 (fax)

Rank V2.0
Athletic performance ranking system
Macintosh Plus or larger; 1 MB of RAM; System 6.0.3 or later.

Rank is a complete performance ranking system designed for professional coaches, clubs, schools and associations. It maintains information on athletes for the purpose of analysis and ranking. The system tracks each performance for as many athletes as input (limited only by RAM). Each performance may contain

stopwatch time (to 1/100th of a second), club affiliation, age at performance, location, event, category (e.g., age, open, world, collegiate), season and type (heats, consolation final, championship final, relay leg, trial). Using Rank, coaches can compare athletes in different events and develop training times based on a 1,000 point rating system. Training repeat times and rating an overall workout can also help a coach gain a better feel for strengths and weaknesses. Furthermore, Rank will help an athlete to set obtainable goals and demonstrate progress along the way. Rank can also produce lists for club newsletters and the media.

Reliable Salon System
Beauty salon management
Macintosh with 68030 processor or faster; hard disk drive; printer; optional cash drawer is available.

The Reliable Salon System is a point-of-sale beauty salon management system that provides sales analysis and inventory control, maintains client records, calculates payroll (including commissions) and handles Accounts Payable. Each function updates the General Ledger to provide a profit and loss statement, balance sheet and trial balance. Business is analyzed for the month and year by stylist and category of service, including retail sales. Clients are accessed by any of more than 20 pieces of information, including comments. Lists and mailing labels are available for almost any selection of clients. Referrals can be tracked and rewarded. Client history and inventory are updated at the time of sale. Complete inventory control is provided through status, margin, price and reorder reports. Each stylist has his or her own commission structure for payroll with commission sales accumulated each day. Both manual and computer checks can be handled by Accounts Payable. General Ledger provides manual entries, as well as the automatic entries from the system. Detailed analysis of the accounts is available.
$1,800 retail
Reliable Software & Consulting; PO Box 335; Ft. Calhoun, NE 68023; 402-468-5700

Salon Management System
Salon management/marketing
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; ImageWriter or StyleWriter; System 6.0.4 or later; cash drawer, LaserWriter, HP DeskWriter, bar-code reader, etc. optional.

The Salon Management System is a complete management system for salons. This true, integrated, single-entry system includes inventory, employee and client record database managers, payroll, POS, export capability, client retention/referral tracking and more. The Salon Management System supports bar-code scanners, laser and ink jet printers. A unique feature of the program, Computerized Product Prescriptions, analyzes hair and scalp conditions and prescribes in-salon services and retail "take-home" products for each client. Combined with the system's advertising and direct-mail functions, it affords a salon a comprehensive marketing capability, as well as complete business management.
$1,700 to $4,995 retail; includes software, Macintosh, StyleWriter II printer

■ **Salon Secretary**
Salon owner management
Macintosh Plus or larger; FileMaker Pro runtime.

Salon Secretary, developed jointly by a hair salon owner and a database specialist, is a versatile, very affordable program offering any hair salon a computerized record of appointments, services rendered, shop inventory and detailed client information. Its Client File provides instant data on each customer's hair color, desired perm and/or cut style, dates of last appointment with services rendered, addresses and telephone numbers, birthdays and even appropriate curler lengths. It also includes a label layout and letter forms to speed up personalized client-contact correspondence; and a daily Appointments Calendar displayed in 15-minute increments with a "Look Up" feature. Clicking the button next to a client's name produces the name and data in the Client File. An Inventory File keeps track of all shop supplies, records initial cost and retail price of products sold, and gives the owner an instant picture of what products are selling best.

Scouting Database
Lets scouts and managers better analyze and manage their key resources
Server requires Macintosh Quadra 610 or larger; 8 MB of RAM; Client requires Macintosh PowerBook 160; 4 MB of RAM.

The Scouting Database is a powerful tool designed for professional sports teams that will let scouts and managers better analyze and manage their key resources: hockey players. The Scouting Database is based on 4th Dimension client/server technology, with the main database located in the head office of the sports team. Each scout will collect data on the road (game reports, new players, teams, leagues) and send them to the server whenever appropriate and will at the same time get any updates (leagues, teams, players, messages, etc.). A Game Reports Module allows scouts to rate players of both playing teams via intuitive and easy-to-use entry screens. Key personnel can use the Player Analyzer Module to browse through a list of players and match them under different criteria (height, weight, age, team, position, skill levels). Any scout will be able to enter his or her itinerary and include any expenses while on the road using the Schedule & Expenses Module. The Scouting Database can also be configured for any other professional sports or commodity evaluation situation.

ShopKeeper Shipper
UPS shipping management
Macintosh Plus or larger; System 6.0 or later.

ShopKeeper Shipping is the first of a group of small modular programs that will ultimately let users mix and match only the features and programs needed for their business. Owners of ShopKeeper Plus and Bill-It 4 can start immediately. These versions create an export file named "UPS.date" that can be imported directly into ShopKeeper Shipper. For users with System 7, it can be a desk accessory on the Apple menu for quick lookups or freight calculations without leaving the Sales Ticket screen. Features include: complete UPS rate calculations; U.S.A. and international air shipments; keeps a shipping history for each computer; keeps track of COD payments received; prints shipping labels; prints COD tags; prints a daily manifest with summaries; maintains its own unlimited number of customer files; imports ShopKeeper Plus and Bill-It 4 files; multiple packages to the same address; and quick calc allows adding a preset handling charge to the shipping total.
$295 retail
ShopKeeper Publishing International, Inc.; PO Box 38160; Tallahassee, FL 32315; 904-222-8808 or 904-668-9916 (fax)

Silver Sable
Racetrack publishing system
Macintosh Quadra 610 or larger; 5 MB of RAM.

Silver Sable is a 4th Dimension-based racetrack publishing system that allows users to print a race card with a minimum of user intervention. Automatic page layout is completely done by Silver Sable using the typeset-ready codes text file generated by the Canadian Trotting Association. It is customizable to other text file formats. Key features include: production of race card, driver and trainer statistics, In To Go and race results; customizable race header information (type of bet, saddle cloth color, etc.); can print Also Eligibles at end of each race or in a separate section; easy last minute changes, like driver changes, can be done before printing; and automatic formatting of all data.

SportsPro Hoops
Database and reporting software
Macintosh Plus or larger; 1 MB of RAM.

With SportsPro, users use hard data plus their intuition when making decisions. SportsPro is a tireless assistant coaches want nearby on the sideline of every game. Player stats are kept on a year-to-date basis, so the busy coach and his/her staff can read up-to-the-minute reports on their opponent and their squad. It is the perfect application for the PowerBook user. SportsPro uses the familiar, well-designed FileMaker Pro interface, so users are online in minutes. This comprehensive database and reporting software stores individual player information, individual player game-by-game performance, team stats, opponent game information, medical information, coach's comments, rosters, player rankings, player's specific game and more. Titles in the series include: Hoops, Bats, Gridiron and Soccer.

Sprout!
Graphic vegetable garden design program
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.3 or later.

Sprout! is a graphic vegetable design and database program that allows users to draft out their vegetable garden layouts with pre-drawn vegetable and garden symbols. The unique planting tool positions the vegetables with the correct row and plant spacings. Sprout!'s fully editable database automatically gives users growing information and tips, the number of people the garden will feed, a seed shopping list and even a garden calendar giving the planting and harvesting periods for each plant.

Superdisk Bar Code Printing Software
Code 3 of 9 bar-code label and form generation on the Apple ImageWriter and LaserWriter
Macintosh 512K or larger; ImageWriter or LaserWriter.

The Superdisk Bar Code Printing Software provides an inexpensive means of on-site generation of Code 39 (3-of-9) bar codes using an ImageWriter or LaserWriter. The program uses pull-down menus and dialog boxes to allow the creation of bar codes in a wide range of sizes, with maximum flexibility for entering and adjusting bar-code length, height and content. The program also prints alphanumeric text under the bars. Data can be input from any text file or from the keyboard. UPC label software is also included.
$200 retail

Support Center 2.0
Integrated, multiuser service support center management software
Macintosh Plus or larger; 2 MB of RAM; hard disk drive.

The Support Center is a multicomponent module designed to provide effective financial control in four separate areas: service center repairs; service and warranty contracts; returned material authorizations; and training center management. The Service Repair section is used to manage the activities of a service repair organization, such as those involved in repairs of computers, appliances, stereo equipment, vehicles, etc. The module is fully integrated with the high-end Flexware accounting system and seamlessly works with inventory and accounts receivable. The Service Contract section is used to manage OEM warranty contracts or those created by the service organization. The Returned Material Authorizations section is used to handle returns of items from either a customer or for a return back to a supplier. The Training Center section is designed to manage a full-service training center. Courses can be set up and scheduled for a multiclassroom, multilocation training operation. Full tracking of each course taken by a student is managed automatically in the module.

GlobaLogic Inc.; PO Box 31008; 100 Bayshore Dr.; Nepean, Ontario, Canada K2B 8S8; 613-721-0240 or 613-829-0314 (fax)

Team Statistics Management Packages
Tracks statistics for individual players
Macintosh Plus or larger; System 6.0.3 or later.

Amalgamated SoftWorks, Ltd.'s stat packages offer ease of use, power and utility in tracking all statistics for individual players (by game and for entire season) at the team level. Users just enter player stats during or after a game, and the programs instantly compile year to date statistics with a multitude of predesigned reports. Report Editor allows users to customize reports. Input screens offer a real-time scorebook metaphor in the program's graphical user interface. The number of team records is limited only by disk space. Address labels can be produced for mailing stats to players and/or coaches; as well as all standard statistics. Packages are available for the following sports: softball, baseball, volleyball, basketball, soccer, hockey and football.
$249 retail
Amalgamated SoftWorks, Ltd.; 1600 18th Ave. NE; PO Box 18084; Minneapolis, MN 55418; 612-649-4481 or 612-788-8759 (fax)

Timber Inventory 4.0
Forest inventory system
Macintosh Plus or larger; 1 MB of RAM; hard disk drive.

Timber Inventory is a comprehensive forest inventory system. It will handle all kinds of sampling methods, 60 species (editable) and numerous volume tables, including Doyle, Scribner, cunits, cords and user volume tables. It will summarize any number of jobs, calculate only selected plots if desired and prepare a stand table growth projection.

TMA
Facility management, maintenance, inventory, projects, PM, assets and bar-coding system
Macintosh II or larger; hard disk drive.

The Maintenance Authority (TMA) is a facilities maintenance management system. TMA writes work orders on equipment, work spaces, assets and vehicles. More than 90 pre-written reports, as well as an ad-hoc report generator are included. Color graphs and charts can be produced along with the viewing and printing of CAD drawings converted to PICT format. TMA provides automatic year-round and seasonal PM generation for equipment, vehicles and work spaces. Built-in bar-code programs automatically upload to bar-code readers. TMA tracks internal and external costs on projects. It allows multiple individual charge rates for workers, measures performance and productivity, establishes labor standards and includes a job code library of more than 400 jobs specific to facility management. Stockroom functions are fully integrated into the work order system, providing automatic inventory adjustments. Valuable budgeting reports are provided. TMA is cross-platform capable, allowing Macintosh computers and PCs to use the same datafile on a network. On-site installation and training are included in the cost of the system.

TMA Systems, Inc.; 5232 E. 69th Pl.; Tulsa, OK 74136; 918-494-2890 or 918-494-4892 (fax)

TMA-SR
Spill response maintenance management system
Macintosh II or larger; hard disk drive.

TMA-SR is an integrated system for spill response organizations and the petroleum industry. It is designed for integrated management of spill response equipment and personnel. It is able to incorporate both personnel and oil spill equipment from outside sources. For co-ops, each piece of equipment is tagged with a unique OLA code (Owner, Location, Area) that permits the tracking of labor and material costs on all equipment by these criteria. Personnel from other agencies can also be tracked within SRMMS. Personnel are tracked by response team membership and Incident Command System (ICS) position. More than 90 preformed management reports and an ad hoc report generator are included. Work orders, automatic PM schedules, spare parts control and bar-code integration are just some of the features. Integrated spill packages can be created based on a major tag number. SRMMS is also available for PCs, and data can be shared between Macintosh computers and PCs.

Track Seeding And/Or Track Scoring
Lets users keep track of runner's times for seeding purposes
Macintosh Plus or larger; 1 MB of RAM; System 6.0.3 or later.

Track Seeding, for both track and cross country, lets users keep track of runner's times for seeding purposes. The program is a fully customized database that tracks a multitude of data on meets and runners. A module is available for field events, and a strength & fitness tracking module is optional to track fitness program and strength training progress. Numerous data files can be set up for various meets and events, conference or non-conference. A bar-code system for registering runners at a meet is currently under development. Customizations for specific needs are available under binding estimate. Data can be imported from an existing database, such as FileMaker Pro or Microsoft Works. Track Seeding is System 7 compatible.
$249 retail
Amalgamated SoftWorks, Ltd.; 1600 18th Ave. NE; PO Box 18084; Minneapolis, MN 55418; 612-649-4481 or 612-788-8759 (fax)

Volleyball Statistics Management
Volleyball team and league statistical management
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.3 or later.

Volleyball Statistics Management is an interactive volleyball team and league statistical management software package. It is not a spreadsheet template, but a full running, custom program. Volleyball coaches and athletic and recreation departments can now track the multitude of statistics required for volleyball competition at all levels, including the NCAA. Users can keep up-to-date stats for individual teams or an entire league. The League Level version of the program comes with the Auto Scheduler Module, affording uncompromising flexibility in automating complex league scheduling and tournament scheduling (round robin and seeded schedules) — all without conflict. Auto Scheduler will do scheduling for any sport or competition.

Water/Sewer/Trash Billing System
Water, sewer and trash billing system
Macintosh Plus or larger; hard disk drive; ImageWriter recommended.

Water/Sewer/Trash Billing System is designed for use by any company or city that must bill for water, sewer or trash services (one or all). The program keeps track of historical information that is available on a customer ledger form, as well as prints out the bills on postcard-type forms, unpaid bills, etc. Several versions of the program are available. Some have several rate structures, others allow for multiple water meters, etc.

The Winery Logbook
Tool for professional wine makers

The Winery Logbook combines notebook computer technology with hypermedia software technology to create a tool dedicated to processing wine making transactions, maintaining bulk wine and case goods inventories and automating governmental reporting. The Winery Logbook displays self-prompting, easy-to-understand transaction processing screens that provide audio and visual feedback to the wine maker at each step in the process. The Logbook also allows online access to the BATF Monthly Report of Wine Cellar Operations at the completion of each transaction, so that the report can be printed immediately after processing the last transaction for the month. Other features include hypothetical blending (which displays the alcohol content and component vintages, grape varieties and appellations that would result from the blending of specified quantities of specified wine lots) and "interruptable transactions" (which allow users to interrupt a transaction to enter needed codes or data [e.g., interrupting grape receipt to add a wine lot code,

then interrupting wine lot entry to add a new grape variety, and then completing the transactions]).
$8,000 retail; includes all hardware and software
Serendipity Software Co.; PO Box 332; Bodega, CA 94922; 707-876-9840 (phone/fax)

Work Request & Asset Management
Facilities management with preventive maintenance
Macintosh II or larger.

Work Request & Asset Management is a cost-effective, easy-to-use maintenance program to manage and track work requests and schedule preventive maintenance. It is used by corporations, educational institutions and hospital maintenance departments. Work requests can be monitored by status, priority, in-house and vendor work assignments, projects and cost centers. The program collects and reports labor, material and vendor costs for work requests. An important feature is the flexible ad hoc reporting capability. The program schedules preventive maintenance work orders automatically by calendar or usage hours/miles. Standard tasks can be set up with estimated hours for faster data entry; employee hours can be tracked by trade codes. Purchase orders can be automatically generated from work orders. Multiuser capability is available. An inventory module is available with allocations to work orders, automated parts ordering and cycle counting. A fleet module is available for tracking work orders and preventive maintenance on vehicles.

■ **EGWord 6.0**
Japanese word processor
Macintosh with 68020 processor or larger or Power Macintosh; 8 MB of RAM; 1.8 MB of free RAM; KanjiTalk 7 or later or System 7 with Japanese Language Kit.

EGWord is a Japanese word processor that supports the Power Macintosh natively. It provides an extremely fast operating environment, and the variety of layout features, like the draw table for PICT format graphics, rival standard DTP software. Its enhanced table calculation features include calculating sums and averages and other built-in and customizable formulas. Users can create invoices and sales invoices with EGWord. New table features also include fill-right and fill-down features, reducing repetitive input. In additon, cell-lock features and border lock features are added, as well as individual cell ruler. EGWord comes with Ichitaro conversion software and supports Ichitaro versions 3 thru 5. It also supports AppleScript, Publish and Subscribe, Balloon Help and many others.

■ **Bookends Pro 3.0**
Bibliography management system
Macintosh SE or larger; 2 MB of RAM (4 MB for System 7); System 6.0.5 or later; hard disk drive with 4.5 MB of free space.
Bookends Pro is a bibliography management system that collects, manages and formats references, citations and quotes. More than 90 predefined formats are included for generating references and footnotes that conform to publication specifications or the reference style can be customized. Bookends offers a scan-and-replace feature to automatically scan manuscripts for reference and footnote citations, replace them with properly abbreviated citations and generate a fully-formatted bibliography in the process. Formatted bibliographic material can be saved as a word processing file, printed from a menu or pasted directly into documents using the copy-and-paste option. Reference information can be imported from a variety of online database services (Medline, Dialog, BRS, etc.), CD-ROMs and delimited text files. Bookends offers users enhancement features, including previous entry "peeking," Boolean "and/or" and "not" searches, and quick selection from a journal glossary, keyword or author list.
$129 retail

■ **EGBridge 6.0**
Input utility for EGWord
Macintosh with 68020 processor or larger or Power Macintosh; 8 MB of RAM; System 7.0 or later; Kanjitalk 7 or later or System 7 or later with Japanese Language Kit.
EGBridge is the most compatible input utility for EGWord, and has now been upgraded to support Power Macintosh mode and TSM. EGBridge contains new features, such as Zip code conversion palette, letter palette and Kanji radical search palette. These are new "plug-in" features that are extensions that can be added whenever desired. The powerful dictionary included has been improved and the operation environment is more flexible. Users may store a desired dictionary in the system memory and the setup is user customizable. By using "alias," users may store the dictionary in the ROM disk or limit the number of dictionaries accessible.

■ **Letters On A Disk**
Assistance for handling correspondence
Macintosh Plus or larger; FileMaker Pro runtime.
Letters On A Disk is a computer program for handling virtually every correspondence chore, whether personal or business. It consists of more than 60 expertly-composed sample letters, coded by category, that can be called up on a computer and easily individualized to fit whatever the corresondence situation calls for. The sample letters cover such subjects as resume cover letters, notes of condolence and congratulations, letters of recommendation, thank-you notes and even loan requests and/or responses. The program also provides a quick-access address file, adjusts letter text to fit different-sized stationery and postcards and comes with a text offering interesting, practical tips on letter writing. Basically, this is a program for people who hate to write letters, because it combines computer versatility with originality.

■ **Random House Websters School & Office Dictionary**
60,000 words and definitions
Macintosh Plus or larger.
The Random House Websters School & Office Dictionary is a concise dictionary that gives users quick and easy access to 60,000 words and definitions. The program operates with all major software applications and supports the Writing Tools API. The dictionary uses a computerized dictionary database supplied by Random House. Through data compression, the program operates on low memory requirements (3 MB), making it ideal for laptops and small hard drives. Several search features, including Anagram, Browse, Historical and Wildcard, make it easy to find words and definitions, even if users don't know a word or how a word is spelled.
$29.95 retail
WordPerfect, The Novell Applications Group; 1555 N. Technology Way; Orem, UT 84057; 801-225-5000, 800-451-5151 or 801-228-5377 (fax)

■ **Read Any Data Fork 1.0.2**
Simple text editor opens/reads/writes any data fork
Macintosh 512KE or larger; System 4.1 or later.
Read Any Data Fork is a drag-and-drop, multiwindowed, mono-styled text editor that can open and read any Macintosh file's data fork so that users can read the ASCII text (pictures and other non-ASCII control characters are displayed in "non-understandable" ASCII form). Examples include: the text from a Macintosh file format users cannot interpret may be read; and for HyperCard stacks containing few graphics and sounds, users can reasonably wade through it without actually owning a HyperCard reader. It is Power Macintosh compatible.
$3 retail
Esoteric Software; PO Box 744; Falls Church, VA 22040; 703-532-6981 or 800-217-5051 (orders)

■ **Translate It!**
Document translation
Macintosh II series with 68020 processor or larger; 2 MB of RAM (4 MB recommended); System 7.0 or later.
Translate It! is an easy-to-use, whole document translation program, available for Spanish, French and German. Fast and accurate, it is ideal for personal or business use. Translate It! is capable of translating whole documents, individual words or sentences at the push of a button. Users can translate documents as they are created with the built-in text editor, or import them from a word processor, translate them and export them to the word processor or page layout program. Translate It! gives users full-sentence, idiomatic accuracy and even choices for translating a word based on grammatical usage. Translate It! also features a user-editable dictionary that allows users to add proper names, technical terms and other custom words.

■ **The 1993-'94 American Heritage Illustrated Encyclopedic Dictionary**
Research, reference and library tools
Macintosh with 68030 processor or larger; 2 MB of free RAM; 2 MB of free hard disk space; 8-bit, 256 colors (640 by 480); System 7.0 or later; CD-ROM drive.
Based on the highly regarded American Heritage Illustrated Encyclopedic Dictionary published by Houghton Mifflin, this multimedia reference includes more than 180,000 entries and thousands of full-color illustrations. Users can look up a word without knowing the exact spelling, simply by selecting the first few letters of that word on the lookup screen and hitting the search button. A list of words that begin with those letters will display within seconds. Users can page from definition to definition, or use the powerful "hot word" searching facility, which will call up all associated definitions when any word in the text is selected.

■ **A Tree Through The Seasons & Birds And How They Grow**
Children learn about trees and birds; ages 6 to 9
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later; CD-ROM drive.
A Tree through the Seasons, a beautifully photographed and illustrated story of a year in the life of an apple tree, introduces children to the cyclical process of plant growth. They'll learn how every part of a tree has a purpose — leaves make food for the tree, spring apple blossoms become the apples we eat and that the apples mature and ripen in autumn.
Birds and How They Grow is a fascinating book that chronicles the growth and development of young birds. Children will learn how chicks begin life inside an egg, how they hatch and what they eat. They'll also discover that most young birds learn to fly just a few weeks after birth, enabling them to leave the nest and their parents.
These interactive titles are complete with text, colorful illustrations, dramatic narration, original music and sound effects. Interactive learning software provides pronunciation, syllables, optional Spanish translation and in-context explanations for every word in the text with a click of the mouse. Users see and hear "labels" for parts of pictures by clicking on them.
$36.95 retail; two-disc value bundle
Discis Knowledge Research Inc.; 45 Sheppard Ave. E, Ste. 410; Toronto, Ontario, Canada M2N 5W9; 416-250-6537, 800-567-4321 or 416-250-6540 (fax)

A World Alive: An Interactive Documentary
30-minute documentary on animal life
Macintosh with 68030/16 MHz processor or larger; System 7; 2 MB of RAM; CD-ROM drive (double speed recommended).
$49.95 retail
The Voyager Co.; 578 Broadway, Ste. 406; New York, NY 10012; 212-431-5199, 800-446-2001 or 212-431-5799 (fax)

■ **A.D.A.M. CD-ROM Animation Books**
Explore OB-Gyn, Orthopaedic, Trauma
Macintosh with 68030 processor; 8 MB of RAM; System 7.0.1 or later; CD-ROM drive.
A.D.A.M. CD-ROM Animation Books are modular additions to A.D.A.M. (Animated Dissection of Anatomy for Medicine) applications for indepth exploration. A.D.A.M. Obstetrics & Gynecology operates independently or with other A.D.A.M. products and offers a comprehensive summary of birth and gynecological procedures for anatomy/medical instruction, physicians' reference and patient communications. A.D.A.M. Orthopaedic operates independently or with other A.D.A.M. products and includes animations of surgical procedures for anatomy of the lower limb. A.D.A.M. Trauma, which operates in conjunction with A.D.A.M. Standard and A.D.A.M. Comprehensive and appears on the A.D.A.M. Bookshelf, is a set of interactive animations, patient education documents and accompanying tools for simulating typical head, back and burn injuries.
$95 retail
A.D.A.M. Software, Inc.; 1600 RiverEdge Parkway, Ste. 800; Atlanta, GA 30328; 404-980-0888, 800-755-2326 or 404-955-3088 (fax)

■ **A.D.A.M. Comprehensive**
Anatomical study
Macintosh with 68030 processor; 8 MB of RAM; System 7.0.1 or later; CD-ROM drive.
A.D.A.M. (Animated Dissection of Anatomy for Medicine) Comprehensive is a CD-ROM-based interactive multimedia application for intensive anatomical study. Users can study system to system or structure to structure; and explore virtually unlimited views (anterior, posterior, lateral and medial) in hundreds of layers with three levels of magnification. Labeling lets users point and identify any structure. Numerous interactive functions include Highlighting/Extracting and Find feature, Histologies, Cross-sections, Radiologies

and MRIs. Featured are extensive medical terminology/comprehensive labeling and audio pronunciation guide.
$2,295 retail
A.D.A.M. Software, Inc.; 1600 RiverEdge Parkway, Ste. 800; Atlanta, GA 30328; 404-980-0888, 800-755-2326 or 404-955-3088 (fax)

■ **A.D.A.M. Essentials**
Learn anatomy and physiology
Macintosh with 68030 processor; 8 MB of RAM; System 7.0.1 or larger; CD-ROM drive.
A.D.A.M. (Animated Dissection of Anatomy for Medicine) Essentials is a CD-ROM-based interactive multimedia application for learning about anatomy and physiology at a beginning or intermediate level. Along with an introduction into the human body's anatomical makeup, A.D.A.M. Essentials offers easy-to-absorb comparisons of major structures and systems with associated text and animations. Two anatomical views (anterior and posterior) in 97 layers total with two levels of magnification.
$295 retail
A.D.A.M. Software, Inc.; 1600 RiverEdge Parkway, Ste. 800; Atlanta, GA 30328; 404-980-0888, 800-755-2326 or 404-955-3088 (fax)

■ **A.D.A.M. Standard**
Anatomical study
Macintosh with 68030 processor; 8 MB of RAM; System 7.0.1 or later; CD-ROM drive.
A.D.A.M. (Animated Dissection of Anatomy for Medicine) Standard is a CD-ROM-based interactive multimedia application for intensive anatomical study. Users can study system to system or structure to structure; and explore virtually unlimited views (anterior, posterior and static medial) in 167 total layers with three levels of magnification. Labeling lets users point and identify any structure. Numerous interactive functions include Highlighting/Extracting and Find feature. Featured are extensive medical terminology/comprehensive labeling and audio pronunciation guide.
$1,195 retail
A.D.A.M. Software, Inc.; 1600 RiverEdge Parkway, Ste. 800; Atlanta, GA 30328; 404-980-0888, 800-755-2326 or 404-955-3088 (fax)

ABC News InterActive
Videodiscs of historical, political and social events
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; Pioneer LD-V2200.

Algebra I HomeworkTutor
Step-by-step help with student's Algebra homework
Macintosh Plus or larger; 1 MB of RAM.
$79.95 retail
$350 retail; lab pack of five
$595 retail; room license
$695 retail; site license
Missing Link Software; 718 Pitney Dr.; Spring Lake Heights, NJ 07762; 800-222-9296

■ **Algebraic Patterns**
Learn relationships between numbers; grades 8 to 12
Macintosh II or larger; 1 MB of RAM; System 6.0.7 or later.
Algebraic Patterns is a tool to uncover and test relationships between numbers. It helps students make the transition from arithmetic to algebra. Students collect numerical samples, assign variables and test their conjectures. Finding various relations between the numbers on a table and formulating the relationships in mathematical terms is the goal for the students.
$129 retail; site license available
Sunburst/Wings for Learning; 101 Castleton St.; Pleasantville, NY 10570; 914-747-3310, 800-321-7511 or 914-747-4109 (fax)

The Algebraic Proposer
Tool for creating models
Macintosh Plus or larger.
$79.95 retail
True BASIC, Inc.; 12 Commerce Ave.; West Lebanon, NH 03784; 800-436-2111

Alice In Wonderland CD
Classic tale
Macintosh LC or larger; 2 MB of free RAM; color monitor; CD-ROM drive.
$49.95 retail

■ **Archibald's Guide To The Mysteries Of Ancient Egypt**
Children learn about Egypt and hieroglyphics
Any color Macintosh; 4 MB of RAM; hard disk drive; System 7 or later; CD-ROM drive.

Join Archibald in an adventure back in time to Egypt in 2500 BC. Archibald, son of a British explorer, describes the world of the great pharoah kings during the height of Egypt's ancient civilzation. Listen as he unfolds the myth of King Osiris, and explains exactly how and why the Egyptians preserved mummies to last throughout eternity. Next Archibald leads the adventure deep inside a pyramid and uncovers hieroglyohics, the ancient language of Egypt. Kids learn from Archibald that hieroglphics are not letters at all — they're actually sounds. He teaches the sound of each symbol, how to pronounce words and how to write messages with his special Egyptian tablet. This interactive, animated story is intuitive to use. It will spur the imagination of young and old alike as Archibald leads his expedition to the land of the pharaohs.
$39.95 retail
Swfte International, Ltd.; 722 Yorklyn Rd.; Hockessin, DE 19707; 302-234-1740, 800-237-9383 or 302-234-1760 (fax)

■ **BodyWorks 3.0: An Adventure In Anatomy**
Colorful, comprehensive graphics guide to the human body
Macintosh II or larger; 4 MB of RAM; System 6.0.7 or later; 256-color monitor; hard disk drive.
The human body is the ultimate machine, and now users can explore its systems, structures and functions in fascinating detail with BodyWorks. Colorful, comprehensive computer graphics guide users on a journey through the body. With its vast database, BodyWorks lets users examine exploded views or cutaways that reveal even the most elaborate cell level detail. QuickTime movies bring the intricate functions of the body to life, and with PlainTalk sound suport, users can hear the entire text of the program.

■ **Building Perspective**
Game of spatial perception; grades 4 to adult
Macintosh II or larger; 4 MB of RAM; color monitor required.
Building Perspective is a game of spatial perceptions where students must map the layout of a 3 by 3, 4 by 4 or 5 by 5 city block. Students can observe the block from each of its four sides to predict the top view. As they stretch their spatial ability, students learn to gather information, scan for clues and hints and look for patterns.

■ **Canada's Capital**
Tour Canada's capital; ages 7 to adult
Macintosh LC or larger; 4 MB of RAM; System 7.0 or later; color monitor; CD-ROM drive.
Canada's Capital is an anecdotal narration by Jean Pigott, former member of parliament. Users can tour Canada's capital and hear the stories behind the walls and the statues from 1860 until today. Discover how Ottawa grew from a lumber town to the heart of the nation in 125 years. Canada's Capital contains hundreds of high-quality photos for classroom presentations, music and folk songs, and users can read about the government's beginnings, the events and the people that shaped Canada. Canada's Capital features include: 300 information cards with pictures and movies; hundreds of glosssary entries; zoom button for full-screen picture viewing; bus tour button for slide show; hundreds of sound clips; online help and take notes buttons; and search engine. Users can grab more than 350 "copyright friendly" pictures, music and songs for classroom projects.

■ **The Cat Came Back**
Multimedia musical storybook in three languages; ages 7 to 10
Macintosh LC or larger; 4 MB of RAM; 8-bit color; speakers; microphone; CD-ROM drive.
The Cat Came Back, the second title in the I-learn Library of multisensory, multilingual education CD-ROM products, is a multimedia musical storybook in English, French and Spanish for children ages 7 to 10. Its objective is to teach as well as to entertain. Kids build real reading, writing and vocabulary skills in three languages as they have fun interacting with the story's listen-, read-, sing- and write-along modes. A total of 1,311 new nouns, verbs and adjectives are presented through quirky animation and pictorial definitions. Kids also have fun learning about other subject areas, such as music appreciation and geography.

■ **Chemical Bonding Series: Visualization Of The Abstract In Chemistry**
Animated simulations for chemistry concepts
Macintosh Plus or larger; 4 MB of RAM; System 6.0.7 or later; QuickTime 1.6.1; color monitor; CD-ROM drive.
Chemical Bonding Series: Visualization of the Abstract in Chemistry is a series that provides an outstanding introduction to principles of scientific visualization for beginning and advanced chemistry students. Each of the six modules in the series provides an indepth look at an essential chemistry topic. Topics include: atomic orbitals, atomic spectra and structure; chemical bonding; Lewis structures; the VSEPR Theory; and the periodic table. All modules contain the following features: quality animation and graphics enhance the highly-interactive, easy-to-use interface; narration and high-quality sound effects confirm operations and actions; bold-faced words in the text are hypertextually linked to the glossary; quiz questions allow students to check their progress and a continuously-updated map keeps users informed as to their current location; and immediately available screens. Individual titles in the Chemical Bonding Series are available on diskette, and the entire series is available on CD-ROM. These user-friendly modules enable students to gain familiarity with difficult concepts and build a strong foundation for the understanding of modern chemistry.
$55 per module retail

■ Clock
Learn digital and analog time; grades 1 to 5
Macintosh LC or larger; 2.5 MB of free RAM; 12-inch or larger color monitor.
Clock teaches the relationship between digital time and "clock" time by means of a graphic clock. Users can move the hands clockwise and counterclockwise to set the clock to the time that is shown. Three types of lessons are included, covering every aspect of telling time. Clock features interesting clock faces in color, music and an option to let the computer or a recorded human voice read the problems to add excitement. All functions are activated by clicking easily recognized icons on the screen. Clock helps users understand the relationship between digital and analog time, and gives practice in using time phrases.
$69.95 retail
Hartley Courseware; 3451 Dunckel Rd., Ste. 200; Lansing, MI 48911; 517-394-8500, 800-247-1380 or 517-394-9899 (fax)

■ **Cranial Nerve Atlas**
Anatomy and pathology of the cranial nerve system
Macintosh Plus or larger; 2 MB of RAM; 40 MB hard disk drive; System 6.0.4 or later.

The Cranial Nerve Atlas is a complete hypermedia program that teaches anatomy and pathology of the cranial nerve system to medical students, as well as giving resident radiologists, neuroradiology fellows and practicing radiologists a quick means to interpret MRI scans. The Cranial Nerve Atlas contains more than 200 high-resolution images, including multiplanar cryomicrotome sections, annotated line drawings and more than 100 pathologic cases with differential diagnoses. The Atlas is organized around each of the 12 cranial nerves. At any point in the program, users can select any of the 12 nerves to study. From that point, users can access any available information on that nerve. Most users will wish to focus on the set of pathologic cases. Each case presents a brief patient history with one or more MRI scans. Users can then continue in the program identifying lesions and generating a differential diagnosis. The real utility of the Atlas is where users can compare diagnosis and pathologic scan with the correct answers provided.
$50 retail; hard disk
$100 retail; 44 MB Syquest cartridge
Slice of Life; Eccles Health Sciences Library; University of Utah, Bldg. 589; Salt Lake City, UT 84112; 801-585-2737 or 801-585-2623 (fax)

■ Dermatology For Medical Students
Videodisc tutorial for 3rd and 4th-year medical students
Macintosh Plus or larger; 800K disk drive or 1.4 MB high-density disk drive.
Dermatology for Medical Students (DMS) is an interactive, computer-videodisc tutorial designed for 3rd and 4th-year medical students and to be of benefit to residents in Family and Internal Medicine as well. The intent of DMS is to function as a problem-oriented algorithm for the classification of skin diseases. DMS modules consist of a series of exercises, in increasing difficulty, that teach the logic of the algorithm and allow users to test their proficiency in its use before and after experience to the clinical setting. DMS makes use of images contained on the Slice of Life videodisc. The virtue of DMS as an instructional aid is its ability to illustrate the etiology and pathogenesis of skin diseases before they are clinically witnessed.

The Discis Library
Interactive stories and teacher's guide; English/Spanish
Macintosh Plus or larger; 1 MB of RAM; CD-ROM drive; System 6.0.4 or later.
$325 retail; Classroom Edition
$1,400 retail; Lab Pack (50 discs)
Discis Knowledge Research Inc.; 45 Sheppard Ave. E, Ste. 410; Toronto, Ontario, Canada M2N 5W9; 416-250-6537, 800-567-4321 or 416-250-6540 (fax)

■ **The Discovery Toolkit Monthly**
Collection of photos, sounds, artwork, animation, text and more for creating multimedia projects, lessons or reports
Macintosh LC or larger.

The Discovery Toolkit Monthly is a disk-based thematic collection of photos, sounds, artwork, animation, text, research and movies for creating multimedia projects, lessons or reports. Students and staff may use The Discovery Toolkit Monthly with their favorite software on Macintosh, Windows or DOS platforms. The nine-month subscription also includes a set of 25 newsletters, delivered each month, with project ideas, bibliographies, Master Teacher lesson plans and special discount offers on hardware and software from participating Pierian Spring Software partners.
$319 retail
Pierian Spring Software; 5200 SW Macadam Ave., Ste. 250; Portland, OR 97201; 503-222-2044, 800-472-8578 or 503-222-0771 (fax)

■ **Dissections**
Students learn classical dissection techniques
Macintosh II or larger; 2 MB of RAM; CD-ROM drive; 8-bit color monitor recommended; HyperCard 2.1 or HyperCard Player.

This CD-ROM includes six laboratory modules that introduce students to classical dissection techniques through interactive digital video clips and high-resolution still images. Modules include a frog, perch, earthworm, starfish, grasshopper and crayfish.
$129 retail; includes K to 12 building license
Digital Imaging Associates, Inc.; An Affiliate of Major Educational Resources Corp.; 10153 York Rd., Ste. 107; Hunt Valley, MD 21030; 410-628-9200, 800-989-5353 or 410-628-0915 (fax)

Divide & Conquer
Teaches the concepts and principles of Hebrew grammar
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; System 6.0.7 or later.
$49.95 retail
Davka Corp.; 7074 N. Western Ave.; Chicago, IL 60645; 312-465-4070 or 312-262-9298 (fax)

■ **Divide And Conquer**
Students use logic and problem-solving skills; grades 4 to 12
Macintosh II or larger; 1 MB of RAM.

Ten letters, prepresenting numbers 0 to nine, are presented to students. With Divide and Conquer, their task is to break the code and find the numerical values for the letters. The dividend is given to students who enter the divisor. While the computer calculates the quotient and remainder, the numbers are partially in code. It is the student who must "divide and conquer." Not only must students add, subtract, multiply and divide, they must use all of their logic and problem-solving skills to break the code.
$79 retail; site license available
Sunburst/Wings for Learning; 101 Castleton St.; Pleasantville, NY 10570; 914-747-3310, 800-321-7511 or 914-747-4109 (fax)

Dracula
Creative writing program
Macintosh LC or larger; 2 MB of RAM; color monitor.
$49.95 retail
Queue, Inc.; 338 Commerce Dr.; Fairfield, CT 06430; 203-335-0906, 800-232-2224 or 203-336-2481 (fax)

Draw What You See
Teaches students how to draw easily; grades 5 to 12
Macintosh Plus or larger; 1 MB of RAM; HyperCard 2.0 or later.
$80 retail
Full Circle Media; 25 Valley View Ave.; San Rafael, CA 94901; 415-453-9989

■ **Dynamic English**
English course
Macintosh Plus or larger; 4 MB of RAM; color monitor (640 by 480 by 256 colors); System 7.0 or later; CD-ROM drive.

Dynamic English is DynEd's pioneering introductory English course that maximizes the effectiveness of multimedia by focusing on the key skill necessary to acquire any language: listening. In addition, both speech and reading practice provide secondary support and serve to engage learners in a wider variety of activities. Dictation and fill-in exercises also reinforce basic grammatical and lexical points appropriate to a basic level course. Level 1 is suitable for both absolute and false beginners, young adult and older. Levels 2 and 3 prepare students for more advanced materials, such as Dynamic Classics or Interactive Business English. Course content includes: Level 1 (names & places, numbers & time, jobs & family); Level 2 (daily activities, our world, locations); and Level 3 (on a trip, energy sources, directions).

$495 per level retail; English only
$595 per level retail; bilingual
DynEd International, Inc.; 989 E. Hillsdale Blvd., Ste. 130; Foster City, CA 94404; 800-765-4375, 415-578-8067 or 415-578-8069 (fax)

■ **Dynamic Japanese**
Listening-based Japanese course
Macintosh Plus or larger; 4 MB of RAM; color monitor (640 by 480 by 256 colors); System 7.0 or later; CD-ROM drive.

Dynamic English is a listening-based Japanese course that systematically presents the structures and vocabulary necessary to acquire the Japanese language. While other courses present situational dialogs or grammar-based patterns, Dynamic Japanese combines the best of both in a carefully sequenced approach that recycles structures and vocabulary from absolute beginner through pre-intermediate level of study. The six discs of Dynamic Japanese in three levels focus on useful language. Particular emphasis is placed on language typically needed by foreigners speaking to Japanese people, rather than on the Japanese spoken among Japanese native speakers themselves. Altogether, this complete course provides about 150 hours of intensive study and practice.
$350 retail; Level 1
$595 retail; Levels 2 and 3
DynEd International, Inc.; 989 E. Hillsdale Blvd., Ste. 130; Foster City, CA 94404; 800-765-4375, 415-578-8067 or 415-578-8069 (fax)

■ **Dyno-Quest**
Thinking skills game; grades 3 to 8
Macintosh Color Classic or larger; 800K disk drive; System 6.0 or later; hard disk drive with 2 MB of free space; 100K of available RAM.

Dyno-Quest's high adventure encourages students to observe, analyze and organize facts and information about dinosaurs and the lands they once roamed. Traveling back in time to the eras when continents were shifting and dinosaurs ruled the earth, users hope to recover the missing pieces of the phototag camera to photograph their target dinosaur. Users search for facts, record notes, reference a database and make strategic plans to travel safely and efficiently through time to reach their objective. Users will be encouraged to: make decisions based on observation, analysis, classification and inference; plan and organize information; increase note-reading skills; build note-taking skills; use the dinosaur database; and demonstrate map-reading skills. A 24-page user guide is included.
$69.99 retail
$185 retail; lab pack
$499 retail; network
MindPlay; PO Box 36491; Tucson, AZ 85740; 602-888-1800, 800-221-7911 or 602-322-0363 (fax)

EA Global Update
Brings history up-to-the-minute
Macintosh Plus or larger; 1 MB of RAM; hard disk drive; Aldus PageMaker 4.2 or later; System 6.0.3 or later.
$79 retail; Eastern/Western Europe
$79 retail; Africa
Educational Activities, Inc.; PO Box 392; Freeport, NY 11520; 516-223-4666, 800-645-3739 or 516-623-9282 (fax)

■ **EasyBook**
Kids can write and illustrate their own books
Macintosh Plus or larger; System 6.0 or later.

EasyBook is a fun and easy to use book publishing program for kids. Students become authors easily and quickly as they write, illustrate and then print their own stories. Children improve their overall language skills as they experience the pride of authorship that comes from seeing their stories in print. EasyBook produces books instantly by printing on both sides of the paper: just remove the stack of paper from the printer, fold it in half, and the book is complete. With EasyBook, students see their "real" book on the screen, complete with a cover, title page and story pages. EasyBook keeps young authors in full control, offering constant visibility of their storybook and its sequencing. Students can customize the layout for every story page and decorate pages with colorful paint tools, including 336 built-in stamps or ones they create themselves. Children love to tell their stories, and have lots of fun as their creativity spills onto the pages of their very own book.
$59.95 retail
Chickadee Software, Inc.; RR2, Box 79W; Center Harbor, NH 03226; 603-253-4600 or 603-253-4623 (fax)

Japanese language program
Macintosh Plus or larger; hard disk drive; System 6.0.7 or later.
$99 retail
HyperGlot Software Co., Inc.; PO Box 10746; Knoxville, TN 37939; 615-558-8270, 800-726-5087 or 615-588-6569 (fax)

Echos
Strengthens sight, rhythm and note reading skills
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later; MIDI interface; MIDI keyboard.
$99.95 retail
$500 retail; network license
$700 retail; site license
Electronic Courseware Systems, Inc.; 1210 Lancaster Dr.; Champaign, IL 61821; 217-359-7099, 800-832-4965 or 217-359-6578 (fax)

■ **Echos II**
Strengthens music-reading skills
Macintosh Plus or larger; 1 MB of RAM; System 6.0.4 or later; MIDI interface; MIDI keyboard.

Echos II is the followup to Echos. It is designed to strengthen sight-reading skills, as well as rhythm and note-reading accuracy for the more advanced key signatures. Students "echo" musical examples to strengthen their sight-reading skills. Students also examine two separate pieces of music to identify what they hear being played.
$99.95 retail
$500 retail; network license
$700 retail; site license
Electronic Courseware Systems, Inc.; 1210 Lancaster Dr.; Champaign, IL 61821; 217-359-7099, 800-832-4965 or 217-359-6578 (fax)

Eco-Adventures In The Oceans
Animated computer game that explores the oceans of the earth, teaching students about the fragile ecological balance of the oceans; grades 6 to 12
Macintosh Plus or larger; 1 MB of RAM; hard disk drive recommended; System 6.0.2 or later.

■ **Farm Animals & Spiders**
Children learn about farm animals and spiders; ages 6 to 9
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later; CD-ROM drive.

Farm Animals covers horses, cows, sheep and pigs. The text and photographs in this book take a practical look at why and how people raise farm animals. Children will begin to understand the differences between young and adult animals and their varying needs for food, water, shelter and medical care.

Children often think of spiders as creepy, crawly, frightening creatures. This book shows how interesting and beautiful spiders can be. A survey of spiders from around the world tells how babies are born, how spiders spin webs made of silk threads and how they use them as homes and traps to catch insects they need for food.

These interactive titles are complete with text, colorful illustrations, dramatic narration, original music and sound effects. Interactive learning software provides pronunciation, syllables, optional Spanish translation and in-context explanations for every word in the text with a click of the mouse. Users see and hear "labels" for parts of pictures by clicking on them.
$36.95 retail; two-disc value bundle
Discis Knowledge Research Inc.; 45 Sheppard Ave. E, Ste. 410; Toronto, Ontario, Canada M2N 5W9; 416-250-6537, 800-567-4321 or 416-250-6540 (fax)

■ **First Words, First Words II And First Verbs**
Early vocabulary for adults and children with disabilities
Any Macintosh.

First Words, First Words II and First Verbs help children and adults with disabilities master essential early vocabulary. High-quality speech, colorful graphics and amusing animation capture and maintain the user's attention. Six levels of training and a variety of customization features enable instructors to tailor lessons to the specific needs of the user. Interface options include the keyboard, mouse, TouchWindow or a single switch. Automatic data collection provides easy record keeping. These programs offer the consistent, supportive environment that people with special needs require and have been widely recognized for their excellence of design, content and instructional delivery.
$225 retail

■ **Fraction-oids**
Improves understanding of fractions; grades 2 to 8
Macintosh Color Classic or larger; 800K disk drive; System 6.0 or later; hard disk drive with 1.3 MB of free space; 850K of available RAM.

Fraction-oids is an excellent introduction to the concept of fractions. Users begin with graphical representations of the fractions to better understand numerators and denominators. Through the three levels, users will learn to compare numerical fractions with graphic representations that are selected. Addition and subtraction of like fractions is also introduced with graphic support. The game portion of this program may be turned on or off to suit users. Users will learn to: make graphical representations of the numerators of a fraction; make graphical representations of the denominator of a fraction; compare three fractions to determine largest and smallest; create numerical fractions from a graphical representation; add fractions with common denominators; and subtract fractions with common denominators. A 24-page user guide is included.

■ **Fun Around The House**
Children learn and explore within non-linear format
Macintosh LC or larger; 2 MB of RAM; System 6.0.7 or later; color monitor; CD-ROM drive.

Fun Around the House encourages children to learn and explore in a non-linear format. It features marvelous graphics, engaging animations and incredible hidden surprises, including guest appearances in full-motion video by all-time favorite cartoon characters. More than 250 words are introduced, each with a picture in an appropriate setting and in an illustrated dictionary reference. Fun Around the House includes various home scenes and nine different games to teach words and concepts. It has a creative writing section for users to create their own stories based on the scenes and the characters.

Interactive Knowledge, Inc.; 1100 S. Mint St., Ste. 209; Charlotte, NC 28203; 704-344-0055, 800-344-1502 or 704-344-1505 (fax)

■ Gliding
Introduction to basic trigometric ratios; grades 8 to 12
Macintosh II or larger; 1 MB of RAM.
Gliding is a problem-oriented introduction to basic trigometric ratios. Students are challenged to find the appropriate ratio to describe the path of a glider. By using the correct trigometric ratio, students help the glider reach its destination. Gliding helps students develop the relative meaning of sine, cosine, tangent, ratios and slope.
$79 retail; site license available

■ Graffiti One
Self study for ESL students
Macintosh Plus, SE, or II family; HyperCard 1.2 or later; hard disk drive.
Graffiti One is a self-study program for intermediate, high school and adult ESL students. It combines words, pictures and sounds into an enjoyable and challenging interactive learning experience. The program uses male and female American voice models to improve students' listening comprehension, along with an engaging story line and a comic-strip format that enables users to see and hear the dialog. Reading comprehension exercises, including dictation, multiple choice, timed skim and scan and fill-in activities, motivate students with immediate feedback and scoring.
$149.50 retail
Audio-Forum; 96 Broad St.; Guilford, CT 06437; 203-453-9794, 800-243-1234 or 203-453-9774 (fax)

■ **GuidePath**
Systemic pathology
Macintosh Plusor larger; 2 MB of RAM (4 MB for System 7); 20 MB of free hard disk space; System 6.0.4 or later.
GuidePath is a multimedia, computer-aided instruction program designed to teach systemic pathology to second-year medical students. GuidePath covers 18 subjects (each major organ system). Text icons in GuidePath are linked to the Slice of Life videodisc, making it ideally suited for interactive small group teaching. GuidePath contains 2,800 gross and microscopic images, as well as X-rays and charts. A concise user's manual teaches students and faculty alike how to use GuidePath in less than 1 hour. In addition, a computer lab schedule illustrates each section of the subject headings. Because GuidePath is a hypertext authoring program, users can edit and revise GuidePath to meet their specific instructional needs in devising a pathology curriculum.
$600 retail; site license
$500 retail; GRIPE members
Slice of Life; Eccles Health Sciences Library; University of Utah, Bldg. 589; Salt Lake City, UT 84112; 801-585-2737 or 801-585-2623 (fax)

■ **Gus And The CyberBuds Sing, Play And Paint-A-Long**
Children learn to sing-along, paint and create
Macintosh LC or larger; 4 MB of RAM; System 7.0 or later; CD-ROM drive; 13-inch color monitor or larger recommended.
In Gus and the CyberBuds Sing, Play and Paint-A-Long users can sing-a-long to favorite children's songs, paint pictures with a variety of colorful tools and even create their own animated songs. Lively animation and sound effects, scrolling lyrics, QuickTime videos and a sophisticated yet user-friendly paint program work together on CD-ROM to provide users with an interactive environment where they can sing, play and paint-a-long to a mix of original and all-time favorite children's songs. The paint program provides users with creativity tools to add to a song's background scene or create an entirely new scene while listening to a selected song. Children can even create an entirely new version of a song complete with animated characters. Gus and the CyberBuds Sing, Play and Paint-A-Long provides written and verbal instructions, as well as interface controls in a choice of languages (English, French, German, Spanish and Japanese).

■ **Homemapper**
Interactive teaching about the home
Macintosh Plus or larger; 1 MB of RAM; System 6.0.5 or later; HyperCard 2.0 or later.
Using the same powerful tools found in Weathermapper and Bodymapper, Homemapper encourages children to think about living spaces and homes. Children will explore the home and the surrounding areas as they collect, read, write and record information about their own personal environment. Activities include: comparing rooms of today with rooms in homes 100 years ago; identifying common safety hazards; what common household materials are recycleable; and choosing foods for a balanced diet.
$65 retail; single copy
$299 retail; site license
Intellimation; PO Box 1922; Santa Barbara, CA 93116; 805-968-2291, 800-346-8355 or 805-968-8899 (fax)

Hometown, U.S.A.
Design and build custom buildings patterned after those found in small towns

$24.95 retail
Compton's NewMedia, Inc.; 2320 Camino Vida Roble; Carlsbad, CA 92009; 619-929-2500 or 619-929-2511 (fax)

■ **Hop To It!**
Students learn numbers and correct order; grades K to 3
Macintosh II or larger; 2 MB of RAM; System 6.0.5 or later; hard disk drive; color monitor recommended.
Hop to It! teaches students to send a bunny along a number line to collect objects by making the correct numerical expression. Students tell the bunny how far, in what direction and in what order the object must be collected. On another planet, students make Stanley the Astronaut collect objects in a particular order or, on a different level, collect those objects using only given numbers.

■ **How The West Was One + Three x Four**
Students learn arithmetic expressions
Macintosh LC or larger; 2.5 MB of RAM; hard disk drive required.
In How the West Was One + Three x Four, students race a locomotive and stagecoach in an Old West setting along a number trail. Given three random numbers and by using +, —, x, / and () to construct arithmetic expressions, students try to make their biggest move, bump their opponent, take a shortcut or jump to the next town. Limited to using each number and operation once per turn, students must use their problem-solving skills to arrive at the answer for their best move.

■ **Human Anatomy**
Study guide of the human body
Macintosh LC III or larger; System 7.0 or later; videodisc player or CD-ROM drive.
Human Anatomy is a multimedia program designed for use in the study and review of gross anatomy. Features include more than 9,000 photographic images of the human body at various stages of dissection as performed in medical schools. The images are accompanied by textual descriptions of dissection methods and anatomical structures. References to commonly used Netter's, Grant's and Rohen/Yokochi's atlases are also included. Review and comprehension of materials is facilitated by three testing options: the flash utility provides controlled review of material; the self-assessment utility generates tests using a collection of more than 48,000 questions; and the formal testing feature offers "practicum" questions taken from the content authors' 58 years experience of teaching gross anatomy. Human Anatomy is available for CD-ROM and laserdisc/computer workstations. Optional use of the content authors' 250-page manual and bar-code manual is available.
$1,500 suggested retail; site license available
Gold Standard Multimedia Inc.; 235 S. Main St., Ste. 115; Gainesville, FL 32601; 904-373-1100, 800-375-0943 or 904-373-7124 (fax)

■ **HyperBrain 5.0**
Neuroscience education
Macintosh Plus or larger; 2 MB of RAM; 20 MB of free hard disk space; HyperCard 2.1 or later.
HyperBrain is a HyperCard application designed to be the core resource for neuroscience education. HyperBrain may be linked interactively to either the Slice of Life or Slice of Brain videodiscs or may be used independently. HyperBrain is designed to expand as new modules are developed. The program consists of a series of 14 chapters that are linked to a syllabus of more than 750 images and a glossary of more than 1,400 illustrations. Each chapter is followed by a quiz with images and learning responses for each correct and incorrect answer. Mid-term and final "practical" exams are provided from a bank of 500 images and 150 questions. HyperBrain also contains an index (linked to the Bassett Stereoscopic Atlas) of 8,500 images of gross and microscopic neuroanatomy, neuropathology and neuroradiology. Students can access atlas material, as well as animated reflex diagrams or the neuroscience portion of the videodisc index. The program has the built-in option for instructors to track student mastery of subject matter.

■ **HyperHeart**
Teaches five subject areas of the heart
Macintosh Plus or larger; 2 MB of RAM; 4.5 MB of free hard disk space; HyperCard 2.1 or later.
HyperHeart is a multimedia program that links interactively to the Slice of Life videodisc or functions as a stand-alone piece of instructional software. HyperHeart teaches five basic subject areas of the heart: embryology; anatomy; physiology; pathology; and clinical diagnosis. HyperHeart presents, in dynamic function, the physical actions, pressure changes and heart sounds, including pathological sounds and electro-potential changes. HyperHeart allows both students and instructors to add, edit and make quizzes and notes (using the institutional version). Additionally, the program is designed to track student progress and scores and E-mail communications to instructors and other students. Instructors can also make lecture-type presentations. HyperHeart is available in two versions. The smaller student version includes all instructional sections, however, it does not offer note-taking or quiz-making capability, nor does it run the videodisc. The institutional version has full videodisc driving capacity, as well as all of the other listed options.
$35 retail; student version

■ **HyperHistology**
Electronic teaching assistant for a laboratory course in normal human histology
Macintosh Plus or larger; 1.5 MB of RAM; 8 to 10 MB of free hard disk space; HyperCard 2.0 or later.
HyperHistology is an interactive HyperCard program that provides an "electronic" teaching assistant for a laboratory course in normal human histology.

Students can utilize HyperHistology at their own pace and schedule both in and out of the lab. The program may be operated as a stand-alone instructional tool or may be linked to a videodisc player to drive the Slice of Life videodisc. When combined, HyperHistology gives users the ability to access more than 1,000 images from the videodisc in four applications: HistoAtlas, Robo TA, VideoExam and HistoFlash. An additional instructional shell, LectureExam, gives users the opportunity for self-testing of material in the course. Both VideoExam and LectureExam stacks allow faculty to prepare their own tests.
$150 retail

■ **Interactive Business English**
Builds workplace language and vocabulary
Macintosh Plus or larger; 4 MB of RAM; color monitor (640 by 480 by 256 colors); System 7.0 or later; CD-ROM drive.
Interactive Business English gives pre-intermediate level students just the practice they need to build their workplace language and vocabulary and operate successfully in today's employment world. Focusing on language structures and concepts, such as past tense, passive voice, specification, sequence and modality, each of IBE's six discs presents immediately useful language in a realistic international business context. The entire course provides about 100 hours of intensive interactive work. Discs include: Company Description, Job History, Manufacturing & Trade, Product Comparisons, Overseas Assignment and Future Consequences.
$235 per disc retail; English only

■ **Interactive Nova: Earth**
Earth science
Macintosh LC or larger; 4 MB of RAM; 2 MB of available hard disk space; 12-inch monitor or larger (256 colors); System 7.0 or later; videodisc player with serial port.
What makes the Earth a good home? Students will encounter thought-provoking questions like this one in Interactive Nova: Earth. Using NASA's new integrated approach to Earth science, students will explore how air, land and water interact to support life on Earth. Interactive Nova: Earth includes high-interest video stories that will capture students' attention and fuel classroom discussion. Once a class is introduced to the subject at hand on the videodisc, they gain a deeper understanding through the multimedia computer activities, map investigations, extensive lesson plans, hands-on experiments and remarkable still and video footage. Interactive Nova: Earth has a modular design that enables teachers to tailor the product to their classroom needs.

■ **Kap'n Karaoke**
Interactive multimedia program that entertains through both music and computers
Macintosh LC or larger.
Kap'n Karaoke is an interactive multimedia program designed to entertain through both music and computers. It includes 15 children's titles, like "Twinkle, Twinkle, Little Star" and "Pop! Goes the Weasel," as well as five adult songs, including "We Will Rock You" and "New York, New York." The unique interface of Kap'n Karaoke includes several primary colors (bright reds, blues and yellows). The program allows children to control the speed, volume and pitch of songs as they play on the computer with colorful icons.

■ **The Language Activities Of Daily Living Series**
Vocabulary fun for those with special needs
Any Macintosh.
My House, My Town and My School offer exciting exploratory environments in which children and adults with special needs can learn about the objects and activities they encounter in their daily routines. These programs are not only fun to use, they build functional vocabulary and increase independence. Each program features six scenes, within each scene there are four activities designed to increase understanding of object names and their descriptions. Each program contains more than 100 objects. Users can train on all of the objects in a particular setting or select specific items to be targeted. Interface options include the keyboard, mouse, TouchWindow or a single switch.

■ **Launch Pad**
Adult file protection while children enjoy computer use
Macintosh Plus or larger; 2 MB of RAM (4 MB for System 7); 4 MB of available hard disk space; microphone for recording.
Parents can protect their files and feel secure while their kids play on the computer. Kids have their own accounts and are free to use the programs that parents have approved, and parents know that their own files cannot be altered or removed. The Star of Launch Pad, Bingo the dog and his rocket car, escort kids through animated scenes filled with dinosaurs, an enchanted castle, a haunted house and more. These scenes help kids organize their computer materials, while in the background parents control the programs, accessories and documents they see. Launch Pad lets the family share the computer with confidence.

■ **Lazy Eye**
Simulates a wide variety of disorders in ocular motility and pupillary action
Macintosh Plus or larger; 2 MB of RAM; 1 MB of free hard disk space; System 6.0.7 or later; HyperCard 2.0 or later.
Lazy Eye is a highly-interactive HyperCard program that realistically simulates a wide variety of disorders in ocular motility and pupillary action. For each of the disorders simulated, Lazy Eye provides information concerning the clinical exam, motility, pupil response and anatomy. Using Lazy Eye, students/instructors can conduct simulated motor exams, test light and near reflexes and see the effects of various pharmacological agents on these disorders. Lazy Eye also includes six clinical cases upon which can be performed simulated exams to test understanding. Each exam sequence has a module that contains self-testing questions with feed back on all answers. Lazy Eye is designed to be a learning and review tool for students, residents and researchers in ophthalmology, optometry and neurology.

■ **Learn About The Human Body**
Learn how the human body is constructed; grades K to 3
Any color Macintosh; 2 MB of RAM.
Learn About the Human Body gives students the opportunity to study the major organs in the body by making blood flow through the heart, the lungs breathe and the muscles flex. They also connect bones together to create a skeleton and build an understanding of how the body is constructed by peeling away each layer.
$79 retail

HyperGlot Software Co., Inc.; PO Box 10746; Knoxville, TN 37939; 615-558-8270, 800-726-5087 or 615-588-6569 (fax)

Learn To Speak Spanish 4.0
Spanish course
Macintosh LC III (68030/16) or larger; 4 MB of RAM; hard disk drive; CD-ROM drive; System 7.0 or later; microphone or MacRecorder (optional).
Learn to Speak Spanish is a complete course that emphasizes speaking and aural comprehension skills. The course features QuickTime video and audio of the native speakers, as well as cultural video of Mexico. A recording feature lets users record their voice and compare pronunciation to the native speaker. Learn to Speak Spanish has 30 lessons. Each lesson is centered around a situational setting and a dialog and contains vocabulary, setting, dialog and interactive exercises for both grammar and listening comprehension. Included with the course is a 350-page text/workbook containing the exercises from the course, as well as cultural and grammar notes.

■ **Let's Color…Dinosaurs**
Improves creativity; kids of all ages
Color Macintosh; 4 MB of RAM; System 6.0.8 or later; 1.4 MB floppy disk drive.
Let's Color…Dinosaurs is a computer coloring book software series that offers three different individual crayons to choose from for the "color-in" function, in addition to the "paint bucket" function. Users get 30 thrilling dinosaur scenes with wild sounds and a palette filled with 110 colors, 42 patterns and 38 textures. Scenes can be colored and then used over and over again. Let's Color…Dinosaurs features: 30 black and white dinosaur scenes to color; a sound to go with each scene; animated creatures that help users flip effortlessly through the scenes; reusable scenes; 80 patterns and textures; and print capabilities that allow users to either print a finished color picture (requires a color printer) or print a black and white picture to later color with real crayons.

■ **Longman Dictionary of American English**
Learn English as a second language
Macintosh Plus or larger; 160K of RAM; 1 MB of free hard disk space; System 6.0.7 or later.
The Longman Dictionary is an English dictionary designed for people who are learning English as a second language and native English speaking children. It has easy-to-understand definitions, clear explanations and consistent use of examples throughout the dictionary. All definitions for the 38,000 entries and 55,000 example sentences were written using only 2,000 common English words, making them very easy to understand. With the Longman Dictionary, users can copy a word from another application and paste it in the dictionary to look up its definition. If users find a word within a definition that they don't understand, they can quickly look up that word's definition. The Longman Dictionary supports Apple's PlainTalk Text-to-Speech system software extensions so users can hear the computer pronounce any of the 38,000 entry words.

■ **MacLaboratory For Psychology: Research**
Research and skill building
Macintosh II or larger or Power Macintosh; 5 MB of RAM; System 7.0 or later; QuickTime; HyperCard 2.1; color monitor; hard disk drive or CD-ROM drive.
MacLaboratory for Psychology: Research is curriculum based, rather than keyed to any one text. MacLaboratory software utilizes multimedia technology to integrate text, video, graphics, animation and sound. Users can experience what it's like to conduct real research experiments with millisecond accuracy using MacLaboratory's toolkit and their own creativity. Users can test virtually any hypothesis, from measuring motor skills and auditory perception to reaction time and hemisphere specialization. A manual to accompany MacLaboratory provides background information for each experiment, including terms and definitions, as well as basic parameters of the field.

■ **MacVisa**
Provides access control in open-access labs
Macintosh Plus or larger; System 7.0 or later.
MacVisa addresses the problem of access control in open-access labs. Users wishing to access a Macintosh need to enter a valid user name and password. MacVisa also allows "VisaControls" to be set up to restrict use of a given lab, at a given time, to a particular group of users. MacVisa ensures the right people use the right machines at the right time, and will maximize the effective use of valuable time. Other features include student messaging, print addressing, print auditing capabilities and the remote restarting or shutting down of machines. MacVisa's features accurately match the real needs of real users.
$395 retail
$19.95 retail; per extension
Hi Resolution Inc.; The Tannery Complex; 12 Federal St.; Newburyport, MA 01951; 508-463-6956, 800-455-0888 or 508-462-9198 (fax)

$59.95 retail
Educorp; 7434 Trade St.; San Diego, CA 92121; 619-536-9999, 800-843-9497 (orders) or 619-536-2345 (fax)

■ **Mammals: A Multimedia Enclyclopedia**
Learn about mammals
Macintosh Plus or larger; 4 MB of RAM; System 6.0.8 or later; color monitor; CD-ROM drive.
Mammals: A Multimedia Encyclopedia features information on more than 200 mammals with indepth essays on the mammals behavior. It contains more than 700 full-color captioned photographs, 28 full-motion video clips from the Society's TV specials and more than 100 authentic animal vocalizations. There are range maps and vital statistics for each animal and a narrated guided tour of the program. In addition, for fun and learning, a classification game is included. Users can organize all mammals alphabetically, by order or by characteristics; capture views to compare information on different mammals; stop any video clip, view it frame by frame, fast-forward or reverse it; and search the encyclopedia by key words.
$99 retail
National Geographic Society, Educational Media Division; 17th and M Streets NW; Washington, DC 20036; 800-368-2728 or 301-921-1575 (fax)

■ **Maps And Navigation**
Learn the fundamentals of navigation; grades 4 to 8
Macintosh II or larger; 1 MB of RAM; hard disk drive or two disk drives.
When using Maps and Navigation, students learn the fundamentals of navigation to find buried treasure, avoid a hurricane and pinpoint their ship's location to call for help. These lessons culminate in Rescue Mission, a simulation in which students apply map skills and mathematical concepts to help free a humpback whale caught in a fishing net.

■ **Martin Luther King, Jr.'s "Letter From Birmingham Jail"**
A rhetorical analysis; grade 9 to college level
Macintosh Plus or larger; 2 MB of RAM; System 6.0.5 or later; HyperCard 2.0 or later.

Martin Luther King, Jr.'s "Letter from Birmingham Jail" provides students with a deeper understanding of the rhetorical devices in one of the masterful examples of modern argumentation. The package includes three major components: The Letter Section, which includes Dr. King's "Letter from Birmingham Jail"; The Rhetoric section, which includes the faculty notes analyzing Dr. King's rhetoric; and a Library of resources, including an encyclopedia of relevant people, places and organizations, a collection of laws and Supreme Court decisions, a series of documents, a collection of maps and more. Students will be able to better define, describe and identify six major rhetorical elements found in most well-formed arguments, including appeals based on reason (logos), appeals based on the credibility of the speaker (ethos), appeals based on emotion (pathos), audience, style and structure.

Unicorn Software; 6000 S. Eastern Ave., Bldg. 9, Ste. A; Las Vegas, NV 89119; 702-597-0818 or 702-597-0008 (fax)

■ **Math Word Problems**
Increases verbal math proficiency; grades 2 to 6
Macintosh II or larger; System 6.0.7 or later; 2 MB of RAM (4 MB for System 7); 256-color monitor; hard disk drive with 5.5 MB of free space.

Math Word Problems entertains youngsters with exciting sights and sounds as it builds the verbal math proficiency so crucial in comprehending mathematical concepts. Math Word Problems features include five sections that incorporate previously learned skills; all questions posed as word problems; students must identify proper concept and operation before any computations; mixed story problems; fully illustrated and animated; immediate feedback for responses; and performance analysis after each section.
$59 retail
Orange Cherry/New Media Schoolhouse; PO Box 390; Pound Ridge, NY 10576; 914-764-4104, 800-672-6002 or 914-764-0104 (fax)

MathArt
Mathematics teaching aid
Macintosh Plus or larger; any paint or PICT-compatible graphics program.
$34.95 retail
Blue Poppy Productions; PO Box 34245; San Diego, CA 92163; 619-223-7385 or 800-242-7468

■ **Mathville**
Math simulation
Macintosh Plus or larger; System 6.0 or later; dual 800K floppy disk drive or hard disk drive; HyperCard 1.2 or later.

Mathville presents students with a simulated village to explore. Users will learn and make use of real life math skills. Mathville goes beyond drill and practice exercises, providing instead an exciting and challenging environment where math is fun. Mathville makes use of a wide variety of problem-solving skills, including geometry, graphing, statistical and pattern recognition. Users must earn money by solving conceptual problems, then money can be spent on sport or entertainment activities — but don't forget to buy clothing and food. It is available in the following: Mathville 1, 2, 3 for students grades 1 to 3; Mathville Jr. for students grades 4 to 6; and Mathville for grades 7 to 9.

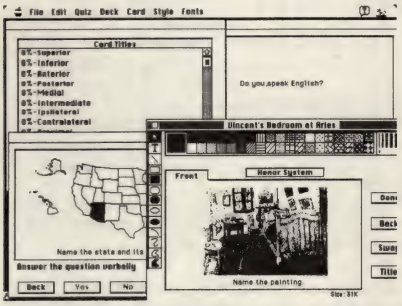
Memorize•It
Multimedia flashcard application
Macintosh Plus or larger; 1 MB of RAM; System 6.0.8 or larger.



Memorize•It is a stand-alone Macintosh application useful for memorizing any type of information. Users create their own decks of flashcards using integrated deck and card editing tools or use pre-fabricated deck collections available from Side∞Eight. Robust editing features expedite card and deck creation. Cards consist of pictures, drawings, text, sound and even video. For interactive quizzing, Memorize•It has four different styles: Honor System, Multiple Choice, True/False and Type-In. Once a deck is created, Memorized•It will interactively quiz users on all the cards in the deck. Memorize•It knows which cards are hardest and will help focus on the cards that give users the most trouble. It allows users to easily input exactly what they need to know and focus on the hardest information. It prints on perforated card stock paper in many different formats.
$49 suggested retail; free demo available
Side∞Eight; PO Box 5004; Garden Grove, CA 92645;
714-952-4114 or 714-995-6725 (fax)

■ **Memorize•It Flashcards, Art History**
Multimedia flashcard application
Any Macintosh; 1 MB of RAM; System 6.0.4 or later; color monitor.
Art History flashcards are created with Memorize•It. The front of each card contains the picture in full color and the back contains the title and the artist. More than 100 paintings are included. A quizzer is included to turn over the deck and quiz. The disks included in the Art History collection are: Unknown Artists and Early History of Art, Painting pre-1400s and 1400s, Paintings 1500s, Paintings 1600s and 1700s, Paintings 1800s, Vincent Van Gogh and the Quizzer application. Users will need Memorize•It to edit these flashcards or to create their own.
$16.99 retail
Side∞Eight; PO Box 5004; Garden Grove, CA 92645;
714-952-4114 or 714-995-6725 (fax)

■ **Memorize•It Flashcards, German Vocabulary 1, 2 And 3**
Multimedia flashcards application
Any Macintosh; 1 MB of RAM; System 6.0.4 or later.
The German Vocabulary Flashcard are created by Memorize•It. One side contains the English word and the other side the German. Both sides contain sound. Each volume contains 250 to 300 flashcards on various topics. A quizzer is included in each to turn over the deck and quiz in either language. German Vocabulary 1 contains: Airport words and Animals; Parts of a Car, Bedroom words and City words; Body Parts and Clothing; Colors, Countries and Days of the Week; and the quizzer. German Vocabulary 2 contains: Foods, Fruits and Vegetables, and Kitchen words; Farm, Languages, Living Room and Military; Months, Moving and School; Numbers 0 to 75; and the quizzer. German Vocabulary 3 contains: Numbers 76 to 105, Ship words and Television; Shopping, Space and Train words; Sports, Time and Travel; Weather and Work; and the quizzer. Users will need Memorize•It to edit these flashcards or to create their own.
$13.99 per volume retail
Side∞Eight; PO Box 5004; Garden Grove, CA 92645;
714-952-4114 or 714-995-6725 (fax)

■ **Memorize•It Flashcards, Spanish Vocabulary 1**
Multimedia flashcard application
Any Macintosh; 1 MB of RAM; System 6.0.4 or later.
Spanish Vocabulary 1 Flashcards are created by Memorize•It. One side contains the English word and the other the Spanish. Both sides contain sound. A quizzer is included to turn over the deck and quiz in either language. The disks included in the collection of Spanish Vocabulary Flashcards are: Animals and City words, Birds, Clothing and Bedroom words, Foods and Kitchen words, Auto words and Countries and Quizzer application. Users will need Memorize•It to edit these flashcards or to create their own cards.

■ **Micro-LADS**
Grammatical instruction for children with learning disabilities
Any Macintosh.
The Microcomputer Language Assessment and Development System (Micro-LADS) is a series of seven modules that provide grammatical instruction to children with language-learning disabilities. Micro-LADS uses more than 600 pictures and 300 vocabulary words to train comprehension of 46 fundamental grammatical constructions. Natural speech, colorful graphics and amusing animation create a dynamic learning experience. With three levels of difficulty and a variety of customization options, Micro-LADS meets the needs of diverse learners and ensures success. Interface options include the keyboard, mouse, TouchWindow or a single swtich. These programs can be used with non-readers, but there is a text option for beginning readers. At the end of a lesson, a detailed performance summary can be saved or printed out.
$775 retail; complete set of seven modules
$175 retail; each module
$250 retail; any two modules

■ **Neuropathology Stacks**
Neuropathology concepts
Macintosh Plus or larger; 2 MB of RAM; 6 MB of free hard disk space; HyperCard 2.0 or later; System 6.0.5 or later.
Neuropathology Stacks is an interactive software program for learning neuropathology concepts and for application of problem-solving approaches to case studies. When linked to the Slice of Life videodisc, users can, selecting individual images, create instructional units on a multitude of topics. Each interactive videodisc instructional unit consists of five sections: pre-test; instructional lesson; post-test; case study; and glossary. Users have control of the order of selection within each unit. A Table of Contents Index is provided for each lesson. A comments feature is also built in for users to record comments and questions by means of using a local hard drive. Content in all individual cards have the capability of being modified by users.
$250 retail
$525 retail; site license
Slice of Life; Eccles Health Sciences Library; University of Utah, Bldg. 589; Salt Lake City, UT 84112; 801-585-2737 or 801-585-2623 (fax)

■ **NoteTaker**
Teaches practical skills to ESL students
Macintosh SE or larger.
The activities in the NoteTaker series provide students with an opportunity to learn and practice one of the most common types of notetaking — highlighting. The NoteTaker series consists of three separate diskettes, each containing a unit that is geared to a successively more proficient ESL reading audience. The major features of NoteTaker are: teacher authoring system, which enables instructors to enter their own text/questions; beginning, intermediate and advanced notetaking skills levels; quiz score records include student's name, date of quiz, percentage correct and identification of incorrect answers (records may be printed out or stored in memory); student summaries may be printed out, allowing for later evaluation of writing proficiency; teacher records, override and authoring files are protected by password; and documentation includes instructions, text of readings and answer keys.
$129 retail; single copy
$349 retail; site license
RDA Mind Builders; 35 Crooked Hill Rd., Ste. 200; Commack, NY 11725; 516-499-0053, 800-654-8715 or 516-499-0389 (fax)

Number Connections
Mathematics; grades K to 3
Macintosh Plus or larger; 2 MB of RAM; hard disk drive and color monitor recommended.
$129 retail
$775 retail; network version (site license available)
Sunburst/Wings for Learning; 101 Castleton St.; Pleasantville, NY 10570; 914-747-3310, 800-321-7511 or 914-747-4109 (fax)

Number Munchers
Arithmetic for children ages 8 and up
Macintosh Plus or larger; hard disk drive optional; System 6.0.2 or later.
$29.95 retail
MECC; 6160 Summit Dr. N; Minneapolis, MN 55430; 612-569-1500, ext. 529, 800-685-6322, ext. 529 or 612-569-1551 (fax)

NumberMaze
Combines math and mazes; ages 5 to 12
Macintosh Plus or larger.
$59.95 retail; NumberMaze Color (also supports black and white)
Lab Packs and network versions are available

$49.95 retail
Queue, Inc.; 338 Commerce Dr.; Fairfield, CT 06430; 203-335-0906, 800-232-2224 or 203-336-2481 (fax)

■ **Pickleface And Other Stories**
Higher-level reading skills program
Macintosh LC, Performa 400 or larger; 4 MB of RAM; System 7.0 or later; CD-ROM drive.
Pickleface and Other Stories is the first in a series of three high-level reading skills programs designed to appeal to middle school learners. Story content focuses on the adventures of Jodi and her friends, while helping users build comprehension skills. A computerized glossary lets learners find meanings to new words highlighted throughout the stories. A help screen is available. All of the stories have exciting graphics, sound, music, hint frames, an option to let users hear the computer read all or part of the content and another option to listen to recorded human voices read the stories. The program comes with on-screen, password-protected record keeping, as well as a Teacher's menu that lets teachers modify many features.
$79.95 retail
Hartley Courseware; 3451 Dunckel Rd., Ste. 200; Lansing, MI 48911; 517-394-8500, 800-247-1380 or 517-394-9899 (fax)

Picture It!
Foreign language picture dictionary
Macintosh Plus or larger; 1 MB of RAM.
$69.95 retail
Penton Overseas, Inc.; 2470 Impala Dr.; Carlsbad, CA 92008; 619-431-0060, 800-748-5804 or 619-431-8110 (fax)

■ **Portuguese Grammar: A Review**
Teaches Portuguese language
Macintosh Plus or larger; 1 MB of RAM; HyperCard 2.0 or later.
Portuguese Grammar is a tutorial review by the self-learner or as a supplement to existing elementary or intermediate-level Portuguese textbooks. Nearly 900 information and exercises "cards" cover all verb tenses and voices, and other aspects of grammar. Explanations of grammar usage are given in English in "scrolling" fields. A broad range of exercises and tests follow each explanation. Immediate feedback on right choices and explanations of mistakes is possible through the use of the mouse cursor, without keyboarding.
$24.95 retail
Audio-Forum; 96 Broad St.; Guilford, CT 06437; 203-453-9794, 800-243-1234 or 203-453-9774 (fax)

■ **Radiologic Anatomy**
Interactive multimedia program covering the fundamentals of normal anatomy
Macintosh Plus or larger; 3 MB of RAM; 6 MB of free hard disk space; color video monitor; laser videodisc player with a serial port; HyperCard 2.1; System 6.0.7 or later.
Radiologic Anatomy is an interactive, self-directed educational program covering the fundamentals of normal anatomy found on common diagnostic imaging studies. It is designed for medical students and students of other health professions. Interns, residents and practicing physicians will also find it a helpful review of anatomy and imaging. Radiologic Anatomy utilizes a computer and laser videodisc or CD-ROM workstation to create an interactive learning environment. Radiographs, video segments showing fluoroscopy and radiologic techniques and cadaveric still photographs are combined with textual descriptions of the pertinent structure, image or video. The software allows flexible navigation and access to correlative information at any point, and a quizzing function gives users immediate feedback. The ASRT has certified Radiologic Anatomy for 32 continuing education credits.
$2,000 retail; videodisc
$1,000 retail; CD-ROM version

■ **Richard Scarry's How Things Work In Busytown**
Children learn of real-life expereinces; ages 3 to 6
Any 256-color Macintosh with 68030 processor or larger; 4 MB of RAM; System 6.0.7 or later.
Richard Scarry's How Things Work in Busytown will give children a genuine sense of accomplishment as they learn how things work in Busytown. Children will join Huckle Cate and Lowly Worm in fun-filled activities like building a tractor, harvesting wheat, grinding it into flour and baking treats at Busytown bakery. A variety of real-life experiences emphasize cause-and-effect relationships and early learning skill, such as word recognition, counting and problem solving. Features include: eight interrelated playgrounds where children explore how things work together in a community; players develop early learning skills and a sense of accomplishment by getting involved in Busytown tasks; and graduating levels and seven original songs allow children room to grow in a toe-tapping environment.
$49.95 retail
Paramount Interactive; 700 Hansen Way; Palo Alto, CA 94304; 415-812-8200 or 415-813-8055 (fax)

The Rosetta Stone Language Package — Level Ia
Language study aid; Spanish, English, French or German
Any color-capable Macintosh (8-bit minimum); 2 MB of RAM (4 MB for System 7); hard disk drive; System 6.0.7 or later; sound recording feature requires Macintosh with a microphone jack or external audio digitizer; CD-ROM drive.
$395 each retail
Fairfield Language Technologies; 122 S. Main St., Ste. 400; Harrisonburg, VA 22801; 703-432-6166, 800-788-0822 or 703-432-0953 (fax)

■ **The Rosetta Stone PowerPac**
Language study aid; Spanish, English, French and German
Any color-capable Macintosh; 2 MB of RAM (4 MB for System 7); hard disk drive; sound feature requires microphone; CD-ROM drive.
The Rosetta Stone PowerPac is a multimedia CD-ROM introduction to four languages: Spanish, French, German and English. Taken from The Rosetta Stone Library, it features 22 lessons in each language. The Rosetta Stone PowerPac is an immersion style, interactive, multimedia program for beginners that uses native speakers and 880 real-life color pictures in the presentation of carefully-sequenced, step-by-step instruction. The program elicits users' response and gives instantaneous feedback in a game-like, natural learning environment. New vocabulary and syntax are integrated to create an intuitive learning process similar to the way a native language is learned. Voice record and dictation modes are included.
$99 retail

■ **Russian-On-A-Disk**
Practice and learn Russian inflectional forms
Macintosh Plus or larger; System 6.0.7 or later.
Russian-on-a-Disk contains an intelligent and effective approach to practicing and learning Russian inflectional forms. It contains full inflections of 500 nouns, 400 verbs, 200 adjectives (long and short forms, comparatives), all pronouns, pronominal adjectives, numerals, most irregular words and a representative sample of regular words. It sorts master lists by gender, stem-type, declension-type, stress-type, etc.; and prints out an unlimited number of customized quizzes, review sheets and full inflections. It contains both type-in and on-screen flashcard drills. Users can drill with or without vowel stress and drill selected forms or all forms at once. It contains textbook-independent and user-customizable courses and texts.

■ **The Sentence Master**
Improves reading comprehension
Any Macintosh.
The Sentence Master is a revolutionary program for children and adults who have failed to learn to read. The primary goal of the program is to overtrain the often elusive non-content words (such as "the," "is," "and") and word endings (such as "s," "-ed," "-ing"). Although there are only about 150 commonly used non-content words in the English language, these "little words" make up almost half of the text on any page of text and are major determiners of meaning. By truly teaching these words, The Sentence Master gives learners control over half of any page they will ever encounter. Mastery of these words significantly improves both decoding and comprehension skills. Each of the four levels of The Sentence Master contains four Word Activites, eight Animated Stories and eight Reproducible Story Booklets. Interface options include the keyboard, mouse, TouchWindow or a single switch. At the end of a lesson, a detailed performance summary can be saved to disk or printed out.
$475 retail; per level
$1,425 retail; for all four levels
Laureate Learning Systems, Inc.; 110 E. Spring St.; Winooski, VT 05404; 802-655-4755, 800-562-6801 or 802-655-4757 (fax)

■ **Shakespeare's Life And Times CD-ROM**
Interactive guide to Shakespearean study; grades 8 to college level
Macintosh Plus or larger; 4 MB of RAM; System 6.0.7 or later; QuickTime 1.6.1; color monitor; CD-ROM drive.
Shakespeare's Life and Times is a CD-ROM exploration of Elizabethan England that enables students to

gain a deeper understanding of Shakespeare's plays via interlinking subjects. Topics cover Shakespeare's life, stage and plays, as well as the social, intellectual and literary background of the times. Highlights of this CD include more than 200 color graphics of Renaissance life and art; enhanced sections on Renaissance art, architecture and music; video clips of Renaissance dance; and texts and concordances of 18 of Shakespeare's plays. A powerful "Topics" tool allows users to set up customized links and annotations within the program and students may "block" scenes from some plays using a special module, "The Shakespeare Director." This tutorial provides a vivid, realistic context in which to understand Shakespeare.
$89 retail
Intellimation; PO Box 1922; Santa Barbara, CA 93116; 805-968-2291, 800-346-8355 or 805-968-8899 (fax)

■ Shapes
Images, mini-essays, music and captions
Macintosh with 68030 processor; 4 MB of RAM; System 7.0 or later; 8-bit, 256-color monitor; dual-speed CD-ROM drive.
Shapes is a valuable resource for people involved in the visual arts. Each volume of Shapes provides 400 superb images, 10 mini-essays, original music and captions illustrating elements of basic design present in nature and the built environment. The material is available, royalty-free, for use in print. Elements of design covered include line, areas and planes, texture, mass, form and rhythm. Shapes will help users to look more critically at their surroundings. Working from a collection of 100 source images, three additional variants of each image are provided featuring a wide variety of creative effects. This gives a unique demonstration of the creative possibilities of image manipulation. Whether teaching, working or studying in the area of visual arts, Shapes will prove to be an indispensable resource in helping users to see our familar world in a new light.
$39.95 each retail; Vol. One: Design in Nature or Vol. Two: Man-Made Design

■ Sitting On The Farm
Multimedia musical storybook in three languages; ages 7 to 10
Macintosh LC or larger; 4 MB of RAM; 8-bit color; speakers; microphone; CD-ROM drive.
Sitting on the Farm, a multimedia CD-ROM title in English, French and Spanish, teaches children reading, vocabulary and creative writing skills. It is a story and a song about a farm girl whose peaceful picnic is invaded by hungry animals. Sitting on the Farm is the first title in the I-learn Library, learning products for the home that engage and entertain while fulfilling underlying educational objectives. Sitting on the Farm incorporates multisensory features, such as animation, sound and music to provide an enlivening, integrated learning experience for children ages 7 to 10. Sitting on the Farm aims to teach language skills and to cover such subject areas as music appreciation, geography and social studies. Children use the listen-, read-, sing- and write-along modes to interact with the musical storybook and its lively characters. It also includes a fun activity booklet for kids to continue the learning experience off-computer.
$39.95 retail
